T H E S E S.

I.

Sanguis menstruus a reliquo sanguine non differt.

II.

Causa, cur caput foetus plerumque praeivium sit, in uteri evolutionis modo posita est.

III.

Minus recte VAN DEVENTER, uteri obliquitatem frequentissimam et gravissimam causam partus infeliciores habendam esse, statuit.

IV.

„Die Aufstellung einer Ovarialschwangerschaft halten wir für noch nicht hinreichend begründet.“

KIWISCH VON ROTTERAU.

V.

Causae graviditatis extra-uterinae primariae adhuc latent.

VI.

Methodus versionis instituendae a VON DEUTSCH proposita in casibus difficilioribus institui nequit, in facilioribus contra non requiritur.

VII.

Errant, qui dicunt, versionem alterius foetus, etiam si caput praevium sit, indicatam esse, altero foetu vel naturae viribus vel artis auxilio nato.

VIII.

„Mit der Zange geboren werden, geltete oft dafür, durch die Zange geboren werden.“

STEIN.

IX.

In eclampsia, ostio uteri aperto, dum caput foetus adhuc alte positum est, plerumque versio in pedes est suadenda.

X.

In eclampsia, ostio uteri nondum satis dilatato, quum partus terminandus est, scarificatio colli uteri violentae manus introductioni praeferenda est.

XI.

Obtumentum remedium tutum et plerumque certum est ad partum praematurum provocandum.

XII.

Non semper in feбри puerperali uterus est atrium morbi.

XIII.

Prudens et decorum est obstetricibus ita favere, ut honoratiores etiam, certe melioris conditionis mulieres in artem obstetriciam incumbant.

XIV.

„L'évolution des dents engendre très souvent des accidents locaux de stomatite simple, ulcéreuse ou aphtheuse, et des phénomènes généraux, sympathiques vers la peau, les muqueuses et le système nerveux.”

BOUCHUT.

XV.

„La rougeole, qui débute par une convulsion, est toujours grave.”

BOUCHUT.
