Bibles on the middle of *London-Bridge*. 1675.

T O
The RIGHT HONOURABLE,
and my NOBLE LORD,

Sir Robert Dormer,

BARONET,

Baron Dormer of *Wing*, Viscount
Ascot, Earl of *Carnarvan*, and Master of
His Majesties Hawks.

S I R,

Ver since I came to serve
your Country in Mili-
tary Occasions, I accoun-
ted my self your Servant,
and to that end have
made strong Intimation: But Multa
cadent, manyhaps hinder hopes: now
left to mine own Power, I could not
find any thing that could so well ex-
press

press me to your Lordship, or shew you what I am, either in Affection or Virtue, as the Dedication of this Book, which contains me amply and fully adorned with the best of mine own Feathers. And howsoever it may appear to your Honour with an old Countenance, both because my Self, the Title, and much of the matter is old, yet let me give assurance unto your Noble Goodness, that there is that newness of Truth, Art, and approved Experience, which unto this day hath not been discovered in any other Author. It is more (my Noble Lord) than fifty years ago, since I began to sail in this Ocean, and to discover the fruitful Traffick of this needful Art: Nor have I in the interim of Time been a Truant, but with my best means and abilities have pursued it (as near as I could) unto the
height

The Epistle Dedicatory.

height of Perfection, and doubtless
(much honoured Sir) I have not lost
all my labour, what I have gained I
have here now newly inserted, and
send it in all Humility to kiss your
Lordships hand; not as a material thing
worthy your Study, but as a poor vir-
tue that needs your Defence. And
howsoever, I dare not set it forth as a
Present worthy your acceptance, yet
be pleas'd to make it such by your Fa-
vour, which can make mean deserving
appear to be of greatest merit. This
Obligation now offered unto your Wor-
thy hand, is the free offering of my
Love, Service and Affection; and in
a word of my self, who am as well as
my Work devoted to be ever yours.
This Book is but the external Pledge
which doth demonstrate the inward
Obligation of my Heart, since what I
(a) am,

The Epistle Dedicatory.

am, Art, Soul and Affection is only Yours, and desire to be so esteemed in all my Actions, especially in this Work. If it arrive with as good Success, as I transport it with sincere Devotion, no doubt but the Work will gain lustre, and my self shall find that satisfaction which shall make me ever acknowledge my self,

Your Honours humble
devoted Servant,

GERVASE MARKHAM.

AN
ADMONITION
TO THE
READER,

*Which I would wish him to Read, before he peruse
the BOOK.*

WO Errors (gentle Reader),
have been laid to my charge
in the first Publication of this
Book, as namely, a mistaking
in the Table of Additions
wanting Direction: And the
great Multiplicity or heaping
together of many Medicines
for one Grief, without distinguishing their goodness,
or foretelling the Practitioner, on which to rely for
his best Profit and Assurance.

The first was but a venial escape in the Printer,
and may be forgotten, inasmuch as it is in this Im-
pression fully amended. For the second, which is
the Multiplicity of Medicines, I have for thy sa-
tisfaction, to all those Medicines which of mine

To the Reader.

own knowledge I have found to be certain and most approved, and to be the best of those which are coupled with it; I have in the Margin, and over against the Medicin placed this Mark .

As also to every new Addition, and new Chapter, (never before published) I have in the beginning of the Chapter placed this .

And for thy better furtherance in this Work, I have likewise in the Table, to all the new Additions (which are the very Excellencies of all my knowledge) placed this Mark also .

And this I have done for two Reasons:

First, to make this Work which was one of my first, and entituled my *MASTER-PIECE*, a true *MASTER-PIECE* indeed, and so exact in every part, that other stolln Pieces and Pamphlets Christened in my name, and Printed without my knowledge or assistance, with twice so many Falshoods as Pages, may be known to be both Bastards and Abortive; mistaking an Ounce for half an Ounce, three Hand-fuls for two, too much of one Simple and too little of another, of which whosoever maketh trial, will, without he hath had some knowledge already, indanger his Horse; and therefore I have given many men notice my self of it, because they have taken one thing for another.

And

To the Reader.

And that the bumbasted Title, and the illiterate and absurd Epistles, were neither the one nor the other of my Invention: For I must most ingeniously confess, that, but to this Book and my self, I was never so happy as to be made a God-Father.

And lastly, to wish all those which are abused by false and imperfect Printings, to come to this Book for Correction, which is a Cabinet that contains all, and more than others struggle for. I can give the Reader no better a Reason to persuade him to read my Book, than to shew him the real use of Horses well managed, according to the Rules of Horsemanship; he is fit for Feats of Arms, and Triumphs in War; and a great pity it is, that such an excellent Beast should any way miscarry for want of knowing his natural Diseases, and the Cure thereof.

I have now made the Souldier and all others, Masters of Art in the Cures of their Horses, if Farriers be failing to advise and consider with them: For it is a Knowledge fit for a Gentleman, both in Peace and War, to be able to cure the Diseases incident to his Horses; for other Countries do love all Experiments, and to be seen generally in all generous Practices, whereof Horsemanship is one of the chiefest. Which Work I will justify upon my Reputation to have been tried by me, and hath wrought good effect; having these fifty years been a Practitioner in the same,
and

To the Reader.

and did never think to have disclosed these Secrets that now I have, which Time and my Industry hath brought to light; and because old Age groweth upon me, and that the Grave will be never awhit the better, I thought therefore to divulge them to the World, rather than to have hid them in Oblivion; desiring the Reader to give God the Glory, and me but only Thanks and good Wishes. So I rest,

Thine,

G.M.

Markham's Master-Piece.

THE FIRST BOOK CONTAINING

All Cures Physical, or such Infirmities, as, being inward, crave the Administration of Physick, and are called in Horse-Leach-craft, *Horse-sicknesses*.

CHAP. I.

Of the natural Composition of Horses Bodies.

Touching the true composition of a Horses body, you shall understand, that it is (as the body of Man) compounded of thirteen several things; that is to say, seven natural, and six not natural: The seven natural, are *Elements, Temperaments, Humours, Members, Powers or Vertues, Actions or Operations, and Spirits*; all which be called natural, because the natural Perfection and excellency of every sensible body doth wholly depend upon them, and hath his moving no longer than they have power of working. The six, which are not natural, be the *Ayr, Meat and Drink, Motion and Rest, Sleep and Watch, Emptiness and Fulness*, and the *Affects or Motions* of the mind; and these are called not natural, because as (being rightly and in due order applied) they preserve, sustain, and fortifie the body;

so being misgoverned, or used in any excess, or disorder, they are the only corrupt destroyers of the whole body: and of these thirteen simples which compound the Fabrick, or whole frame of the body, I intend to speak severally.

C H A P. II.

Of the four Elements, their Vertues and Operations.

First, for the Exposition of the word *Element*, you shall understand, that it is the primary or first beginning of all things, being of itself pure, uncorrupt, and simple; all things being first made thereof, and all things at the last being resolved into the same again. It is also in its own nature so bright, clear, and without contraction of impurity, that it is not able to be discerned by any sensible eye whatsoever. Lastly, it is the least part or *Atome* of that thing which is made or proceedeth from it.

Now of these Elements which are the usual first movers, or beginners of all moving things, there are only four in number, that is to say, *Fire*, *Ayr*, *Water*, and *Earth*; meaning not that *Fire*, *Ayr*, *Water*, and *Earth*, which is visible here with us beneath, and which, through the grossness thereof, is both palpable and to be discerned; but those which are mounted aloft, and through their purity invisible and concealed from us, (for the other are compounded bodies, and not simple.) And of these perfect and distinct Elements you shall know, that the *Fire* is the highest, as being fixed or joyned next unto the Moon, being hot and dry, yet naturally exceeding, or being most predominant, or ruling in heat.

The *Ayr* is placed next unto *Fire*, and is naturally light and hot; yet his predominant or chief quality is moist.

The *Water* is joyned unto the *Ayre*; the disposition thereof being heavy and moist; but his predominant or chief quality only cold.

Lastly, the *Earth*, adjoyned to the *Water*, is the lowest; and it is most heavy and cold; but the predominant or chief quality thereof is only driness.

Now for the vertues, properties, and operations of these four Elements, you shall understand, that first the *Fire*, by means of his heat, moveth matter to generation, and stirreth up warmth in all living things;

things; it is that which the Philosophers call *Heterogenea*, which is in the mixt bodies to separate things of divers kinds one from another, and also to joyn things of like kinds together, which they likewise call *Homogenea*. For by vertue of the Fire, the bones of Horses are separated from the flesh, the flesh from the sinews, the sinews from the veins, the veins from the arteries, the heart from the liver, the liver from the spleen, and so forth, in such sort as we see the divers parts of the fuel we burn, by the vertue of the fire and heat to be separated, and divided one from another, as the vapour from the smoke, the smoke from the flame, and the flame from the ashes. And as in these things, so in many other things, as in the trial of Metals, and such like, where the fire by vertue of his heat separateth body from body, that is, metal from metal, and corruption from incorruption, gathering and knitting together every thing of one and the self same kind. Besides, the vertue of the Fire, is to ripen, order, and digest things raw and undigested, mingling the dry with the moist, and opening the pores, that the Air being somewhat more solid and gross, may enter into the body: And lastly, it breaketh and moderateth the coldness of the Water and the Earth, so that it may not distemper or confound the body.

Touching the vertue and operation of the Air, you shall understand, that by the moistness therof, it maketh the matter apt to receive shape, either natural, or accidental, and by the help and assistance of the Fire, bringeth the powers and influences of the Heavens and Stars into the inferiour bodies, making the mixt bodies not only subtil and penetrable, but also light and mounting, to the end they may neither be too gross, nor too heavy. Secondly, the Air through his moistness cooleth the burning heat of the Heart, Liver, and Intraills, as we daily see by the office of the Lungs and Lungs, which like a pair of bellows draweth uncessantly fresh air unto the Heart and inward members. And albeit, the Aire doth not seem to the sense of the outward eyes, to be any thing neer so moist as the Water, yet according to the opinions, both of our Books and best Physicians, it is by much the moister, which flux spreadeth it self so farre abroad in the Body, that it filleth every empty part and corner thereof, with the special Properties and Characters of moistness, and by that Reason, is much harder to be kept within his own bounds, than

than the water is. Lastly, as the Water was altered by God from his first natural place, for the better profit both of Man and Beast; even so the Air, according to School-mens opinions, was not left altogether in his first natural disposition, lest being over-moist it should so confound and suffocate all Sense, that neither Man nor Beast should be able to Breathe or Live.

Now for the Vertue and Operation of the Water, it is to be noted, that through the Coldness thereof, it conglutinateth and bindeth in mixt Bodies, both parts and members together, which be of divers kinds; as bones with flesh and sinews, flesh with sinews and bones, and sinews with bones and flesh. Even as for a familiar Example, we see in the time of any great Frost, the strength of the Cold how it bindeth things of divers kinds together, bringing into one masse or substance, both Water, Dirt, Stones, Straws, Sticks and Leaves: The Water also with its Coldness, doth temper and cool the inflammation and heat of the Fire, gathering together those things, which otherwise the violent Heat would disperse and scatter abroad.

Lastly, for the vertue and operation of the Earth, it is through his driness in mixt bodies, so to harden and fix them together, that they may retain their shapes, which otherwise by the power of the Air and Water, would be so soluble and loose, that they could not hold together; as we may see in Past, Wax, and such like, which whilst it is moist, will receive no print, but being once hardned, it retaineth any form that is prest into it. And here is to be noted, that according to the opinion of *Hippocrates*, when any sensible body dyeth, not only every quality, but every substance and part makes his return to the Element from whence it came; as heat to the Fire, moistness to the Air, coldness to the Water, and driness to the Earth. And thus briefly you see, that of these four common Elements, or common beginners of things; the Fire being hot, separateth; the Air being moist, shapeth; the Water being cold, bindeth; and the Earth being dry, hardneth and retaineth. The use that you are to make of this knowledge, over and besides the composition of a natural body, is, that when you find any sickness, or infirmity, which proceedeth from the Fire, as Inflammations of the body, or such like, that then you apply simples of the nature of the Air or Water, which may moisten and cool the violence of the heat. If the infirmity proceed
from

from the Air, as Flux of blood, or too much moisture, then you shall apply simples of the nature of the Fire or Earth, whose heat and driness may disperse and harden such moisture. If the disease spring from the Water, as Colds, Rheumes, Apoplexies, and such like; then you shall seek simples of the nature of the Fire and Air; that through the heat of the one, and the moist lightness of the other, all such cold, gross and solid humours may be dispersed. But if the disease proceed from the earth, as Manginess and Leprosie, or their like, that are dry and hardened infections, then you shall seek simples of the nature of the Fire only, whose heat may dissolve and loosen those ill knit, dry, and hard humours.

Thus you see, too much heat is abated by coldness and moistness; too much moistness by heat and driness; too much coldness by heat and moistness; too much driness by heat only.

Thus much of these four common Elements, which begin all things living and unliving, sensible and unsensible; yet of sensible things, which live and have blood, there be other more near Elements, or beginnings, which are called proper Elements, or generation; as the ingendring seed, and menstrual blood, from whence every Beast taketh his first shape and beginning; and yet those proper beginnings have their whole dependency and hanging upon the qualities of the first common beginnings already spoken of, which is moist, dry, hot and cold, for without them they are nothing, nor can do any thing.

CHAP. III.

Of Temperaments, and their several kinds, and how far every way they extend in Horses.

THESE *Temperaments*, or *Temperatures*, which are the second thing in a Horses composition, do spring from the Commixture of the four Elements, and are nine in number, whereof eight are unequal, and the ninth is equal. Of the eight unequal, four are simple, and those be hot, cold, moist, and dry, which Physicians call the first Qualities; and of these, the first two be Active, and the other two Passive: the other four are compound, and they be hot and moist, hot and dry, cold and moist, cold and dry. Now the equal Temperament is divided

divided into two, an Universal and a Special. The equal *Temperament Universal*, is, when the four Elements are in an equal proportion, generally divided through the whole Body, Nature enjoying no more from the one, than from the other. The equal *Temperament Especial*, is, when the Elements are proportioned according as every kind doth most properly require, be it either Plant or Beast: In Plants, when every Plant hath that commixture of Elements, which are proper to its kind, the hot Plant being hot, the cold being cold, &c. Whereas contrariwise, to have a hot Plant cold, or a cold hot, to have Rue cold, or Sorrel hot, were a false and unequal commixture of Elements. So likewise of Beasts, that Horse, that Dogg, that Swine is said to have his due *Temperament*, when he is of such temperature as is most proper unto his kind, which only is best discerned by his Actions, or Motions. As thus, the Horse is known to be hot and moist by his Lightness, Swiftness, Valiantness, and long Life, and also to be of a temperate nature, in that he is easily Tamed, Docible, Obedient and Familiar with the Man. And so long as either Horse, or any other thing, continueth in the Mediocrity and Excellency of his proper *Temperament*, so long as we may truly judge him of a good temper and disposition; but if there be any over-flow of qualities, or excess in his Humours, as either heat, coldness, moistness, or driness, then we say, he is either a hot Cholerick Horse, a cold Dull Horse, a dry Mischievous Horse, or a moist Cowardly Horse, according to the over-flow of that quality which reigneth in him.

Again, every Horse is said to have his due *Temperament*, according to his Age, and the Country wherein he is bred, and sometimes according to the time of the year wherein he Liveth. And thus a Horse in his foal-age, which is, till he be six years old, is naturally hot and moist; in his middle age, which is till twelve, more hot and dry than moist; and in his old age, which is past eighteen, more cold and dry, than either hot or moist. So likewise, the Horses which are bred in Southern parts, as either in *Spain*, *Barbary*, or *Greece*, are naturally more hot than those which are bred either in the seventeen Lands, *Germany*, or *England*; neither is there any Horse, which is in good state of body, that is so hot in the Spring-time of the year, as in the Summer, nor so cold in the Summer, as in Winter. All which observations are with most curious diligence to be observed of every Horse-leach, when he goeth about to cure any sickness: for
unless

unless he consider their natures and temperatures, and every other circumstance already declared, he shall right soon be deceived in the administration of his Physick. Therefore, I earnestly desire every Farrier, before he give any drench or potion, first to inquire the kind, race, and disposition of the Horse, next his age, then the Country, and lastly, the time of the year: and so according to the truth thereof, to mix his receipts.

It is most expedient also, for every Horse-leach to consider the second qualities, which are so called, because they take their beginnings from the first qualities already declared; of which second qualities some be called palpable, or to be touched, as these, softness, hardness, smoothness, roughness, toughness, brickleness, lightness, heaviness, thinness, thickness, smallness, grossness, and such other like. Some again are not palpable, as those which appertain to hearing, seeing, and smelling, as noyses, colours, odours, and such like; and by observing well the second qualities, he shall with much ease know whether the Horse be disposed to any sickness or not, as shall be more largely declared hereafter in every particular Chapter.

C H A P. IV.

Of Humours, and to what end they serve.

NOW concerning *Humours*, which are the third composers of a Horses body, and so likewise of every other beast also; you shall understand that they are four in number, that is to say, *Blood*, *Flegm*, *Choler*, and *Melancholy*. As touching *Blood*, it is in its nature uncorrupted, and therefore hot and moist, and sweet in taste, as participating of the Elements Fire and Air. *Flegm* is cold and moist, and either sweet, or wallowish without any taste at all, as participating of the Elements Water and Air; *Choler* is hot and dry, and bitter in taste, as participating of the Elements Fire and Earth. *Melancholy* is cold and dry, and in taste sowre and heavy, as participating of the Elements Water and Earth: so that these four Humours by their qualities, are every way allied unto the Elements. For to speak briefly, and according to the manner of Physicians, *Blood* is of the nature of the Air, in being most predominant therein; *Flegm* of the nature of water, *Choler* of the nature of Fire, and *Melancholy*

Melancholy of the nature of the Earth. And albeit these Humours are symbolized or mixt through every part of the body, yet every one of them aboundeth more in one part than in another, and have their places of residence, absolute, and particular to themselves; as *Blood* about the heart; *Flegm* in the brain; *Choler* in the liver; and *Melancholy* in the spleen. Now as these Humours do more or less abound, or have greater or lesser sovereignty in the Horse, so is the Beast naturally better or worse coloured, qualified, or disposed, as thus. That Horse in whom *Blood* hath the greatest predominance, and may be called a Horse sanguine, is bright, bay of colour, and in disposition pleasant, nimble, and of temperate or moderate motion. That Horse in whom *Flegm* hath the greatest dominion, and may be called a flegmatick Horse, is for the most part of a milky white colour, and so consequently slow, dull, and heavy. If *Choler* bear the greatest rule in his constitution, then is his colour commonly a bright Sorrel, and by that means of disposition hot, fiery, and of little strength. Lastly, if the Earth have gotten power above the other Elements, so that he may be called a *Melancholy* Horse, then his colour is commonly a Mouse dunn, and his disposition cowardly, faint, and slothfull. But because these particularities are properly appertaining to the Complexions of Horses, of which we shall have cause to speak more largely hereafter, I will not stand upon any greater relations; only I give you thus much in Conclusion: to understand that every one of these afore-said Humours hath his proper use and end, whereunto it serveth, as thus. *Blood* serveth more properly to nourish the body. *Flegm* giveth motion to the joynts. *Melancholy* begetteth an Appetite or *Longing* to his meat. Now during the time that these Humours do possess their natural qualities, so long they are wholesome, and be called by their simple names, without *Glosse* or *Addition*: but if by any mischance they be disordered or corrupted, then they are unwholsome, and are no longer called by their simple names, but have other Epithetons annexed unto them, as *Melancholy blood*, *Salt flegm*, *Cholor adust* or *burnt Choler*, and *fretting Melancholy*, whereof proceedeth many pestilent and dangerous diseases, as shall be at large declared hereafter. And thus much for the state of Humours.

C H A P. V.

Of Members, and their several kinds.

Touching *Members*, which are the fourth main instrument in this great fabrick of a Horses body, they are by School-men divided into two parts: The first is called *Simil-ria*, which is like, semblable, or one and the same thing: The other is called *Instrumental*, and are contrary to the first.

Members alike, are those, which being separated, or distributed into parts, yet every part thereof is alike in substance to the whole, neither altering in definition, appellation, or nature; as flesh, bone, sinew, and such like: for flesh being cut or incised into many parts, yet is every part still flesh, so reputed, and so called, as well as when it was in combination altogether; and as of this, so likewise may it be said of bones, sinews, and the like.

Now for *Members Instrumental*, they be those which being made of parts semblable, and divided into parts, yet the parts are not alike, neither have all one name with the whole; as the head, leg, foot, and such like: for every part of the head is not called the head, nor every part of the leg the leg, but have other appellations, as the brow, the temples, the knee, the feet-lock, &c. Now these *Instrumental* members, in doing of their offices and duties, are of much more perfection than the *Semblable* members: wherefore School-men have made amongst these *Instrumental* members, four Sovereigns or Princes above the rest; that is, the *Brain*, the *Heart*, the *Liver*, and the *Stones*; of which the first three are the preservers of the singular body, and the fourth of the whole kind: the first three giving motion and agitation to the body, the fourth generation and increase to succeeding ages.

Now from these principal members, like branches from a well-grown Tree, do spring other members, which do them service: as from the *Brain* springeth sinews, whose office is feeling, from the *Heart* arteries, whose office is sprightliness and lively-hood; from the *Liver* veins, whose office is warmth and strength; and from the *Stones* the seed-vessels, whose office is procreation and increase. Now forasmuch as from these do likewise proceed a World of other members,

bers, as *Tendons, Ligaments, Lungs, Spleens, Guts*, and such like; all which, in as much as the knowledge of them doth more properly belong to the office of the Chirurgeon, than to the Physician, (though most necessary to both) I am here to advertise every studious Reader, that when he shall have occasion to meddle with any member about a Horse, that he turn to the second Book of this Volume, which treateth only of Chirurgery, and there he shall not only find every member and lineament in a Horse, but also the true Anatomy so lively demonstrated, that there shall be nothing wanting to the perfecting of his understanding. And thus much in this place of Members.

C H A P. VI.

Of Powers, and how a Horses body is governed by them.

POwers, which by some are called *Vertues*, or principal faculties, and do govern and controle both the body of man and beast, and have the fifth place in this work, are in number three, that is, the *power Animal*, the *power Vital*, and the *power Natural*. The *power Animal*, is a vertue incident to the Brain, which through the Sinews coming like little conduit pipes from the Brain, distributeth feeling and moving to all the parts of the body. The *power Vital* is a vertue belonging to the Heart, which doth give Life and Spirit to all the body by means of the Arteries; which proceeding from the Heart, which is the chief fountain of natural heat, carry in their little chanelles over the whole body, that ayre and spirital blood which makes it full of lightness and alacrity. The *power Natural* is a vertue belonging to the Liver, which gives nourishment unto all the body, and to every part thereof, by means of the Veins, which do likewise proceed from the Liver, like greater conduits, carrying the blood from the Liver, which is the fountain of blood, into every part of the body. Besides, the *power Natural* containeth four other vertues, that is, the vertue *Attractive*, which draweth food, meat to sustain the body; the vertue *Retentive*, by which it retaineth and keepeth the food received; the vertue *Digestive*, whereby it concocteth and digesteth the same; and lastly, the vertue *Expulsive*, by which it expelleth excrements and superfluities. Thus these

Powers

Powers or Vertues being of no less validity than you perceive by this discourse, it is the part and duty of every good Horle-leach, to have a more carefull and vigilant respect unto them; for if any of them fail, the Horse cannot live. Therefore, whensoever you see that either your Horse refuseth his food, or that he cannot retain and keep his food, but casteth it up again; or that he doth not digest his food, but keeps it corruptly in his stomach; or that he cannot avoid his excrements in a natural manner, but holds it burning in his body, take them for most certain signs of mortal sickness: And thus much of Powers or Vertues.

C H A P. VII.

Of Actions or Operations, and whereto they belong.

A Stouching *Actions, or Operations*, which are the sixth column or pillar which doth uphold this natural body of which we treat, they are not only belonging, but even derived from the three powers immediately spoken of in the former Chapter, as thus: The action and operation of the *power Animal*, is to discern, to move, and to feel. Horses discern by means of the vertue *Imaginative, Discursive, and Memorative*, whereof the first is placed in the forehead, the second in the middle of the brain, and the third in the hinder part of the head. All which are comprehended under the *power Animal*. Horses move by means of the vertue *motive*, whose action and Operation is to restrain, or let slack the sinews, whereby every Member hath his moving. And Horses feeling is by means of the vertue *Sensitive*, whose action or Operation is busied in the five Senses, as to *See, Hear, Smell, Taste, and Touch*, and all these Actions spring from the *Power Animal*.

The Action or Operation of the *Power Vital*, is to restrain and loosen the Heart, and the Arteries which proceed from the Heart, which Action, whether it be hurt or disturbed in a Horses Body, is easily known of every good *Farrier, or Horse-Marshal*, by the unequal beating of his pulse; that is to say, of the Arteries, which come down from the Heart to the insides of both his fore Leggs, a little below the Knuckles of his Shoulders, and likewise cross both the Temples of his Head, a little higher than his Eyes. And if any man

be so simple, to imagine that the thicknes of the Horses skin shall be an impediment to the feeling of this Motion; let him Remember, that as a Horses skin is thicker than a Mans, so also are his Arteries greater, and beat with more violence, and so consequently be felt without any great difficulty.

The Actions or Operations of the *Power Natural*, are to *Ingender*, to *Encrease*, to *Nourish*, to *desire with Appetite*, to *Attract*, to *Change*, to *Digest*, to *Retain*, and to *Expell*, and many other of like kind. These Actions therefore are carefully to be looked unto by every *FARRIER*, to the intent that he may Learn by them, not only the whole estate of a Horses Body, but also what particular Member thereof is evil affected, as thus: if either in your Horse you find much Forgetfulness, Unnimbleness of his Limbs, or Dulness upon Correction, it is a sign of *sickness* in the Brain, and that the *Power Animal* is evil affected. If you find that his *Pulses* do beat extraordinary slow, or much too fast, it is a sign that his Heart is grieved, and his *Power Vital* evil affected; but if you find that he doth consume, pine away, and loseth his stomach, it is a sign that his *Liver* is perplexed, all his inward parts out of frame, and his *Power Natural* evil affected.

Now you shall again understand, that of Actions, some be *Voluntary*, some not *Voluntary*.

The *Voluntary* Actions be those, which a Horse may either further or hinder, stay or let, when themselves please, as the moving of the Legs: for they may go, stand, or lye down at their own pleasure.

The Actions not *Voluntary*, are those, which depend not upon the will of any Beast, but be done of their own accord, and naturally, as the moving of the Heart, and of the Arteries, and the passage of the Blood; the first, whereof beareth *Sleeping* and *Waking*; and the other hath his course every minute. And thus much of the Actions and Operations.

C H A P. VIII.

Of Spirits, and in what part of the Horses Body they remain.

Spirits, which is the seventh natural Builder of this natural Work, are to be understood, to be that fine, pure, clear, and aery substance, which is ingendred of the finest part of the Blood, whereby the

the vertue of every principal Member may visit all the other parts of the Body, making them to do their duties, according to the rules of Nature. Now of spirits, according to the Opinions of some Physicians, there are but two kinds, that is, the *Spirit Animal*, and the *Spirit Vital*: The *Spirit Animal* is that which giveth power of feeling and moving to a Horse, and hath his resting place in the Brain, from whence through the Sinews, it is dispersed into all other parts of the Body: and it is ingendred of the Vital Spirit, being more vehemently wrought and laboured, and partly of continual breathing: Even so it is partly preserved by the *Cau's* of the Brain, which doth hourly water and nourish it.

The *Spirit Vital* is contained in the Heart, from whence it floweth into every part of the Body, being the chief cause of all natural heat; and it is preserved and nourished both by breathing and blood.

To these two Spirits, there be some *Farriers*, both *Italians* and *French*, which add a third Spirit, and call it the *Spirit Natural*, saying, it hath his residence in the *Liver*, and the *Veins*, but the two former are of such Power, and have such Superiority, that the Body cannot live without them, nor have any being at all: Wherefore, it is the Office of the *Farrier* continually, in all his Medicines, to have either some comfortable Simple, which may maintain and keep the Spirits in their full strength, lively-hood and vertue. And thus much touching Spirits, and those seven natural things which compact a natural Body.

C H A P. IX.

Of the six things not Natural, how they Profit, and how they Hurt

HAVING spoken of the Natural things, whereof a Horses Body is Compounded, it is needfull now that we speak something of the other six which be not *Natural*, so farr forth as they concern the Office of the *Farrier*, and no further; for with other matters we have not to do. The first thing then which is not Natural, yet preserveth a Horses Body in good state, is the Air, which being pure, sharp, clear, and piercing, giveth great life and nourishment to a Horse: but being contrary, that is, gross, thick, and full of putrifaction, it cannot choose but alter the good Habit of his Body, and breed in him many

many Infirmities: Therefore, every *Farrrier*, shall have great respect to the Air wherein a Horse either Liveth, or was bred in, as if a Horse that was bred in a Hot Air, come to live in a Cold, and through the exchange grow sick, the *Farrrier*, shall by warm Diet, close House, and Moderate cloathing, bring his Nature to a stronger acquaintance: Also when a Horse exceedeth in any of the four qualities, that is, in Heat, Moistness, Coldness, or Driness, it is best for him to live in that Air which is contrary to that quality, wherein he exceedeth. Lastly, in many Diseases, the change of the Air is most wholesome, as shall be shewed at large in the particular Diseases.

For the Meat and Drink of a Horse, which is the second thing not Natural in a Horses Composition, it is not to be doubted, but whilst it is sweet, clean and good, as Bread well made and Baked, dry Oats, dry Beans, dry Pease, sweet Hay, sweet Straw, or short Grass, so long it nourisheth and preserveth the Horses Body: But if it be stinky, raw, corrupt and unclean, or if he eat Tares, Fitches, Rye, or Barly, then must he needs be unsound, and full of infirmities: Therefore the *Farrrier* shall be careful to keep him from all such Food, as breeds naughty evil Blood. As for his water, the more pure it is, the better; and the more muddy, thick, and pleasant, so much the more unhealthfull.

Now for this Moving and Rest, that is, either his Travel or Standing still, which is the third thing not natural in a Horses composition, doubtless they be great *preservers* of a Horses health; for as moderate Exercises dissolve gross Humours, ingender Appetite, and add strength unto the Limbs, so likewise indifferent Rest causeth Digestion, comforteth the Sinews, and maketh the Heart cheerefull against insuing Labour. But on the contrary part, immoderate Travel or Exercises, when a Horse is Ridden beyond his strength, breedeth many dangerous and mortal sicknesses, as the Foundring in the Body, the Consumption in the *Lungs* and *Liver*, molten *Grease*, and such like, besides the pissing of *Blood*, *Manginess*, *Farby*, and such like: All which inward Diseases crave strong *Purges*, and the outward *Sharp* and *Corroding* Medicines. Immoderate Rest, which is, when a Horse doth stand long still without any Exercise, Feeding foul and grossly, is as great an enemy to a Horses health as the other: for it congregateth and bindeth together all sorts of ill Humours, breeds corruption in the Blood, rottenness in the *Flesh*,
and

and generally as many Diseases as any ill Diet whatsoever.

The Sleep or Watch of a Horse, (which is the fourth thing in our Composition) is so necessary a comfort to a Horse, that he cannot live without it: it is the greatest mover of Digestion; and so consequently gives comfort to the whole Body. For whilst the Horse sleeps, the powers Animal do take their rest, which otherwise would be over-Wearied, and neither able to discharge their Duties, nor to continue their Actions and Operations, which is the giving of feeling and moving only: and whilst a Horse doth sleep, the powers Natural have more liberty to do their Work, in concocting the Meat, and comforting the Body, in so much as I account sleep to be the only quieting of the Senses, ordained by Nature to ingender strength. Sleep is begotten by sweet, fatty and gross Vapours, (and not by their contraries) which are raised from the Heart to the Brain; with the Coldness of which Brain, those Vapours being congealed and thickned together, do stop the pipes of the Sensitive Spirits, so as they can not resort to the Instruments of the Senses, to give the Body feeling and moving, whereby the Body at that time is deprived of those Motions. And according as those Vapours do more or less fill the pipes, so is the Horses sleep more or less sound and undisturbed; but when this sleep shall at any time grow into excess, and you shall perceive a Horse to sleep beyond both Nature and Custom; then you shall know that such sleep commeth from an evil Habit of the Body, and is a sign either of a *Lethargy*, and a numbness of the Spirits, or else that he hath some inward grief and pain in his Limbs when he standeth; which being eased by lying, makes him cover a continual rest and sleeping. Now for the Watch of a Horse, because it is the meer contrary to sleep, there needs little to be said more than this; that as the excess of the one sheweth the want of the other, so the natural wanting of either, shews the evil state of a Horses body, and gives the *Farriers* warning to expect ensuing sickness.

Now for Emptiness and Fulness, (which is the fifth not natural Compositor) forasmuch as it is only an adding to, and a taking away; some *Farriers* have held Opinion, that all Physick belonging to a Horses body, consisteth in them two only; and truly, I am of this mind, that whosoever can take away Corruption, and add Perfection, shall without doubt ever keep an able and substantial Body. But to our purpose, of this Fulness there are two sorts, the one fulness

fulness by excess of Humours, the other fulness by excess of Meat ; either of which perturbing the Spirits, are the grounds of sickness. Again, excess of Humours are of two kinds, the one an equal increase of all manner of Humours gathered together, and the other particular excess, either of too much *Melancholy Flegm*, or other *Watrish Humours* whatsoever, the first being termed an abundance of Humours, the latter an excess of evil Juice or Nutriment. Lastly, there is fulness in quantity, and fulness in quality. Fulness in quantity, is, when a Horse is full of Blood, or any other simple Humour. Fulness in quality, is, when any of those Humours are too hot, or too cold, too gross, or too thin. Now for Emptiness, as all Diseases of Fulness must be cured by it only, so all Diseases of Emptiness must be healed by Fulness, as by taking of *Blood*, by *Purge*, *Friktion*, *Scarrification*, *Boxing*, *Sweating*, *Bathing*, and a World of such like, as shall be very largely set forth hereafter, in it's proper place.

Lastly, touching the affections of a Horses mind, you shall understand, that so far forth as the Sensitive Soul doth stretch, so far they have sense and feeling of Affections, as namely, to Love, to Hate, to be Angry, to Rejoyce, to be Sorry, and to Fear : For all which there needs no great *Apology*, sith, we have it in daily Experience : as who seeth not the love of some Horses to their Keepers, their hate to Strangers, their angers in their Sights, their joyes in their Prides and Wooings, their sorrows in their Sickneses, and their fears unto their Riders : now these Affections, sith many times they are the grounds of strange Motions in the Body ; therefore, they ought carefully to be looked unto by the *Farrier*, and that the Horse be not overpressed with any of them ; especially fear and hatred, the first whereof compelleth the Blood and Spirits to fly to the inward parts, and to leave the outward without sense or feeling ; and the latter makes him to be unquiet, fierce, and raging ; both together breed distemperature in a Horse, and those distemperatures ingender mortal sicknesses. *And thus much for these six things, being held not Natural in a Horses Composition.*

C H A P. X.

Of Horses Complexions.

HAVING spoken of those thirteen Natural and not Natural things, whereof a Horses Body is compounded, we will now in a somewhat more particular manner speak of the Complexions of Horses, which is one of the most necessary Faces that a *Farrier* can behold, both for the judging of a Horses Infirmities, and also for the true compounding of his Medicines for every Disease: Therefore you shall first understand, that by the Colour of the Horse, you shall ever judge his Complexion: For, look which of the Elements is most predominant in him, from that Element we draw his Complexion, as thus. If he participate more of the Fire than of any of the other Elements, then we hold him to be a *Cholerick Horse*, and his Colour is either a bright *Sorrel*, a *soal Black* without any white, or an *Iron gray* unchangeable, that is, such a Gray as neither will ever turn a *Dable gray*, a *White*, or a *Flea-bitten*, and these Horses are of Nature *Light, Hot, Fiery*, and seldome of any great strength; these Horses are much subject to pestilent *Fevers, Yellows*, and Inflammations of the *Liver*. Therefore every *Farrier* shall be carefull in his composing of any Medicine for such a Horse, to purge *Choler*, yet very moderately, and not with any extraordinary strength in the *Potion* or *Drench*; because, the Horse being in his best strength, not reputed strong, should you apply any violent thing to him, that little strength being abated, there were great danger in the confounding of the whole Body.

If the Horse participate more of the Air, than of the other Elements, then he is of a *Sanguine Complexion*, and his Colour is either a bright *Bay*, or a dark *Bay*, which hath neither scowling Countenance, mayly *Mouth*, nor white *Flank*, or a white *Flea bitten*, white lyard like *Silver*, or *Black* with a white *Star*, white *Rach*, or white *Foot*. These Horses are of Nature *Pleasant, Nimble, Free*, and of good *Strength*. The Diseases to them most incident, is *Consumption* of the *Liver, Leprosie, Glanders*, or any Disease that is infectious. They are of a good strong Constitution, and may endure strength in their Medicines, especially any thing that cooleth the Blood.

If the Horse participate more of the Water, than of the other Elements, then is he of a Flegmatick Complexion, and his Colour is either milk-white, a yellow *Dun*, *Kite-glewd*, or a *Pydebell*, in whom there is an equal mixture of Colours, that is as much white as of the other Colour. Otherwise, if the Bay, the Black, or the Dun exceed the White, he is said to be of that Complexion of which the Colour is greatest. These Horses are of Nature slow, and apt to lose flesh: The Diseases which are most incident unto them, are *Colds*, *Head-ach*, *Rheumes*, *Staggers*, and such like. They are able to endure the reasonable strength of any Medicine, because the abundance of *Flgm* which is in them, sufficeth both Nature, and the potion to work upon: All cold simples are to them exceeding hurtfull, so are also they which are violently hot in the third Degree: the first, because it bindeth too soon; the latter, because it disperses too suddenly, therefore simples of a moderate mean are the best.

If the Horse participate more of the Earth, than of the other Elements, then he is of a Melancholy complexion, and his Colour a *Moose-dunn*, *Ruffet*, *Chestnut*, *Ashy*, *gray*, *dark Bay*, with *marly Mouth*, *Red* or *White* flank, or a *Reddish Bay*, having long white Hair like *Goats* Hair, growing on his Leggs. These Horses are of Nature heavy, and faint-hearted; The Diseases to them most incident, are *Inflammations* in the *Spleen*, *Frenzie*, *Dropse*, and such like. They are commonly of better strength, than they will suffer to appear by their Actions, and are able to endure the strength of any reasonable Medicine: all Cicatrizing and Dry simples are hurtfull unto them; the Cold and Moist are the most profitable.

Having thus shewed you these four Complexions, *Cholerick*, *Sanguine*, *Flegmatick*, and *Melancholy*, together with their qualities and strengths, you shall understand now, that amongst *Farriers* there is another Complexion, or fifth Constitution, which is called the Composition or mixture of Complexions: That is, whensoever a Horse doth participate of all the four Elements equally, and in due proportion, none being greater or lesser than another, and this Complexion of all other is the best, and most perfect, and the Horse which is of this Complexion, is ever of one of these Colours; that is to say, either a fair Brown bay, *Dabled*, or not dabled, a *Dable gray*, a *Black* full of Silver hair, or a fair *Roan Red* or *Black*. and these Horses are of Nature most excellent, most Temperate, Strongest, Gentlest, and

and most Healthfull: though they may have any Disease, yet are they naturally inclined to no Disease: But what infirmity soever falleth unto them, is meerly accidental, and not through any overflow of natural distemperature. All Medicines must be compounded for them, according to the nature of the sickness, and the time of their languishment: For if the sickness be young, and new bred, then they are able to receive any well composed Receipt; but if it be old, and the inward Powers and Faculties feebled, then you must be careful to help *Nature*, by adding to every Medicine of what nature soever, some *simple* of Comfort, that, as ill Humours be cleansed, so strength may still be repaired and maintained. And thus much for Complexions.

C H A P. XI.

Of Inward sickness, the causes and several kinds thereof.

Sith I have already passed over all those things which have a natural and perfect working in a Horses Body, and do maintain, uphold, and preserve the same in good state and health, except accidentally they be encountered and crossed by some Excess, either in Diet or in exercise: it shall now be meet, that we begin to speak of the things which be contrary and against Nature, which are all those things, whereby at any time the healthfull state of the Horses Body is any way impeached: and they be three in number; that is the *Causes*, the *Sickness*, and the *Accidents* which follow every sickness.

Now the *Causes* of sickness are all unnatural affects, and evil dispositions, which going before, do as it were by Violence, bring sickness after them: and of these Causes there be two sorts, some Internal, some External: The Internal be those which breed within the Body of the Horse, as evil Humours, evil Obstructions, and evil Juyc. External are they which communicate with the outward parts of the Body, as Heat, Cold, Worms, and such like, of which I shall speak more in the second Book: And for so much, as I intend at the beginning of every particular Disease, to shew the cause of that Disease, I will at this time speak no more of that subject.

Now for *sickness* it self, which is any thing that is contrary to Nature, it is divided into three general kinds: the first, an *Evil Temperature*,

perature, the second, an *Evil state and Composition*; and the third, a *lofening or Dividing of an Unity*. Now of these two latter, I intend not to speak in this place, because they appertain to Chirurgery, which I reserve for the second Book: But for the first kind, which is an *Evil Temperature*, it is taken two-fold, that is, either simple or compound: Simple, when one quality only doth abound, or exceed, as to be too moist, or too dry: Compound, when more qualities than one do grow into excess, as for a Horse to be too hot, and too dry, or too cold, and too moist. Again, sicknesses are said some to be long, as *Consumptions, Glanders*, and such like, which linger and wear a Horse away by small degrees; Some short, as the *Staggers, Yellows, Anticor*, and such like, which as soon as they be perceived, so soon they be mortal.

Now of Inward sicknesses, some do occupy all the whole Body, some but particular parts: those which occupy the whole Body, are *Feavers, the Pestilence, Convulsions*, and such like: those which occupy Parts or Members, are Colds which annoy the Head; Surfeits which perplex the Stomack: and so likewise all Outward infirmities, proper to every particular Member, as *Splents* upon the legs, *Spavens* on the Hoofs, *Pearls* in the eyes, and such like; as shall be amply shewed hereafter, with their several Cures. And thus much for sickness; and the several kinds thereof.

C H A P. XII.

Of the signs of sickness, and of what nature it consisteth.

THe signs and faces, by which sickness is discerned, are many, and almost numberless: yet in the best sort, that I may, I will shew you such, and so many, as shall amply serve for any Mans understanding. Know then first that there be, according to the Rules in Physick; four especial ways to judge of inward and outward infirmities. First, by accidents, as by the shape, number, quantity, and place of the Member grieved: for if it carry not his true proportion, or be more or less in number or quantity, or out of his proper place, then questionless it is diseased. Secondly, by alteration of the quality, as when it is either too Hot, too Cold, too Moist, or too Dry. Thirdly, when any Member of the Body is hindered from doing his

Office;

Office; as when the Eye cannot see, or the Foot cannot tread. And fourthly, by Excrements, as by his Dung or Urine. But forasmuch, as in the speculation of these qualities, many of the ignorant sort may be either Amazed, Distract, or Deceived, and that my Desire is to give an absolute satisfaction to all sorts of people, I will briefly, and plainly shew you the most undeceiveable signs of all sorts of inward sicknesses; as thus: If a Horse be slower in labour, or Duller to the Spurr than he hath been accustomed; If he be shorter Breathed; If his Ears hang down more than they were wont; If his Hair be more staring; If his Flank be more than usually hollow: If he burn betwix his Ears, or about his Pasterns; If in Travel his stomach fail him, or his Mouth, that in labour was usually wont to be Foaming, become dry; all these are most apparent signs of inward Sickness.

When a Horse holdeth down his Head, which was wont to be of cheerfull Countenance, it is a signe either of a *Fever*, *Head-ach*, or else *Foundring* in the *Body*.

If a Horse be dimm of sight, which was clear sighted, it is a signe either of *Head-ach*, the *Staggers*, or *Sore eyes*.

When a Horse turneth his Head back-ward to the place grieved, if it be to the *Right side*, it is a signe of *Obstructions* in the *Liver*: but if he turn it down to his Belly, then it is a signe either of *Cholick*, *Bots*, or *Worms*.

When a Horse hath water running from his mouth, it is a signe of the *Staggers*, or *wet Cough*.

If a Horses breath stinks, or foul matter issues from his Nostrils, it is a signe of an Ulcer in the Nose or Head; but if the matter be white, then it is a signe of *Glanders*; if the matter be black, then it is a signe of the mourning of the *Chine*; but if the matter be yellow, then it betokens the Consumption of the *Liver*; but if he cast little lumps out of his mouth, then it betokens the Consumption or rottenness of the *Lungs*.

If a Horses Body and Breath be hot, it is a signe of a *Fever*, and heat of the stomach; if therewithall he forsake his meat, it is a signe of Inflammation in his *Liver*, and either of dry or moist *Yellows*.

If the Temple of a Horses Head be very hollow, it is a signe either of the *Strangle*, or old Age.

Shortness of Breath, and a beating Flanck, is a signe either of a *Fever*, or the *Strangle*, but if the passage of the throat be stopped, it

is a sign the film of the *Lungs* is broken, and the *Spleen* troubled, or else broken-Winded.

If any thing lie on both sides the Fore-head, which may be felt beat, it is a sign of the *Staggers*.

If there be any thing swelling about the Ears, it is a sign of the *Pole-evil*: swelling under the Ear, is a sign of the *Vives*; and swelling in the Mouth, a sign either of *Canker*, *Flaps*, *Lampasse*.

Swelling under the Throat, is a sign of the *Glanders*; and swelling about the Tongue roots, a sign of the *Strangle*: But if there be about the Tongue roots, nothing but little small knots, like wax kernels, then it is a sign but of Cold only.

Swelling on the Left side, is a sign of a sick *Spleen*. Swelling in the Belly and Legs, a sign of the *Dropfie*, and swelling in the Flank, of *Cholick* only.

To Cough, or to Offer to Cough, is a sign either of the *Glanders*, or the Mourning of the *Chine*, of a Feather in the Weasand, of the wet or dry Cough, of the Film broken, of the dry Malady, of a Consumption, or of Foundring in the Body.

Staggering is a sign either of a *Feaver*, of the *Staggers*, or of Swaying in the Neck: but if he stagger or role behind only, then it is a sign either of Foundring in the Body, or of pain in the Kidneys.

Trembling is a sign of a *Feaver*, or of a Foundring in the Body: and here is to be noted, that a Horse which trembleth after the Drinking of cold Water, hath during that time of Trembling, a very certain fit of an *Ague*; and if any *Farrier* or other, will but observe it, he shall find that the Horse, after he hath done Trembling, will burn and glow in as great extremity, at least an hour and a half after; and some Horses after their burning, will swear also.

The Hollowness of a Horses back is a sign of a dry Malady, or the *Dropfie*.

Hair-staring is a sign either of a cold *Stomack*, or of Foundring in the Body, but generally of a Cold, or want of Cloaths.

If a Horse stale with much pain, it is a sign either of Foundring in the Body, the wind *Cholick*, or the Stone; and if the Urine which comes from him be yellow, it is a sign of the *Glanders*, but if it be blackish and thick, it is a sign of a pain in the Kidneys.

Leanness and Gauntiness, is a sign of *Hide-bound*, or of a Consumption, of the dry Malady, of Foundring in the Body, Inflammation,

mation of the Liver, the Yellows, Cholick, or Worms.

Laxativeness, or looseness of the Body, is a sign of a Hot Liver.

Costiveness in the Body, is a sign of Dry Yellows, or of Diseases in the Gaul.

If a Horses Dung stink, it is a sign of a Hot Liver; if it have no smell, then of a Cold Liver; but if it be undigested, then either of a Consumption, or of a Dry Malady.

If a Horse go stiff, it is a sign either of Wrinching, Hipping, Stiffing, or Foundring either in Body or legs: if he go Crouching behind, and Stiff before, then the grief is in his fore-Legs, but if he go only Weak behind, then is the grief in his hinder Legs only.

If a Horse desire extraordinarily to lye down on his right side, it is a sign of Heat in the Liver. If on the left side, then of a Diseased Spleen. If he be oft up and down, finding no rest, then it is a sign of Bots, Worms, Cholick, or Griping in the Belly: if when he is down, he spreads himself abroad, it shews the Dropsie; if he groan when he is down, it shews either a sick Spleen, in Dist Yellows, Cholick, Bots, or film broken; if he be not able to rise when he is down, then either mortal Weakness, or Foundring in the Body or Legs.

To be troubled with much Wind, is a sign either of grief in the Spleen, or loss of much Blood.

If a Horse forsake his Meat, it is a sign either of a Fever, Head-ach, Strangle, Staggers, Consumption, or dry Malady, Anticor, Foundring in the Body, a hot and consumed liver, moist Yellows, Cholick, or the Worms; but if when he forsakes his Provender, he doth as it were Chavel, or Chaw a little Hay, and in his Chawing doth make a certain sharp Nose in his Mouth, as if his Tongue could not well part from the Roof without a kind of Chanking, it is then a certain sign that the Horse is troubled with the falling of the Pallete of the Mouth, a Disease which only commeth by over-much Traveling, or too sore a Burthen.

If a Horse desire to eat much, and drink little, it is a sign of a Cold Liver, but if he desire to drink much, and eat little, it is then a sign either of a Fever, rotten Lungs, heat in the Stomack, heat in the Liver, or the dry Yellows.

If a Horse both Eat and Drink with an extraordinary greediness, it is a sign of Rotten Lungs, or a Diseased Spleen.

Lazy heavy going, Contrary to true Nature, is a sign either of a

Fever,

Fever, Sick-spleen, Yellow, or else Obstructions of the Liver.

If a Horse strike with his foot at his Belly, it is a *sign* of the *Cholick*: but if when he *striketb*, he fisk with his Taile also, then it is either Bots, or rough Worms.

If a Horse be Scabby, and Ulcerous all over his Body, and about his Neck, it is a *sign* of the Mangy: if it be an Ulcer full of *Knobs*, creeping alongst a Vein, it is the Farcy: if spreading abroad only in one place, it is a *Canker*: if the Ulcer be hollow and crooked, it is a *Fistula*: but if it be a spongy Wart, full of Blood, it is then an *Anbury*

If a Horses Tongue hang out, and be swoln, it is a *sign* of the *Strangle*.

To Conclude, if a Horse in health beat short, thick, and fast in the flank, it is a sign of *sickness* in the Lungs and Lights, which we call *Broken-winded*, with a World of other such like signs and tokens, as shall be more amply declared in every particular Chapter.

C H A P. XII.

General Observations in the Physicking of Horses.

AFTER you can by these Signs and Characters, judge and approve either the health or sickness of a Horse, it is then necessary, that you learn some General Rules and observations which belong to the *Physicking* of a Horse; lest that either by your Rashness, Unskillfulness, or Uncleanliness, in what you go about to do, you commit errors more grosse than the Medicine you administer hath power to do good. Know then first, that whensoever you go about to give your Horse any inward Potion or Drench, you must first take very carefull heed, that your *Drink* be no more than *Milk* warm: for there is nothing more mortal to a Horse, than the scalding of his stomach. Next, you must be very carefull that you give the Drench easily and gently, lest in making too much hast, the Drink pass into his Wesand or Wind Pipe, and so force him to an extreme Coughing, and almost suffocate him; which if it do, you must then let his Head loose, and walk him up and down till the passion be past. Lastly, you shall observe, in giving a Drench, to draw out the Horses Tongue before you put in the Horn, and then presently let it loose again: for
that

that will compel him to swallow whether he will or no. And this is principally to be used, when you give your Horse Pills, as Butter and Garlick, Butter and Sanders, or Butter and Saven: Also, every Drench will work the better, the longer you keep the sick Horse fasting, both before and after his Medicine; wherein is likewise to be Observed, that moderate Exercise, (as gently Walking, or Trotting up and down, according to the horses strength, after his Drench received) is most wholesome, and maketh the Medicines work a great deal the better.

You shall likewise Observe, if you horses *sickness* be a Fever, to mix alwayes your simples either with warm Water, with Honey, or with Oyl; but if the Disease be Coughs, Rheums, or any thing that proceedeth of Cold causes then you shall mix your simples with good Ale, or Wine; and if your Horse be brought low and weak with *sickness*, then you shall mix your simples with Milk and Eggs.

You shall also Observe, that in Blood-letting, you must take but half so much from a young Colt, as from an old horse, and but the fourth part from a yearling Foal: also in letting Blood, you must carefully regard the Age and Strength of your Horse, taking more or less according to his Ability of Body. Lastly, letting of Blood is either to Divert *sickness*, and preserve Health, or to Refresh, and cool the Spirits, or to diminish Blood, or else to purge gross and bad Humours.

Observe before you let your Horse Blood; first moderately to chafe, or exercise him: then let him take rest a day before his letting Blood, and three days after, not forgetting that *April* and *October* are the two principal Seasons of the year for that purpose, except urgent occasion be ministred.

Observe, whensoever you Rake your Horse with your hand, (which is to draw his Ordure out of his Fundament when he cannot Dung) that then, first you anoint all your hands with Sallet Oyl, or Butter: the like you must ever do when you put up any Suppository; but when you administer any Glisten, you shall then but anoint the Glisten-pipe only. Many other Observations there are, which be more particular, and those you shall find annexed to the several Cures of every Disease. Thus much then of these general Observations.

C H A P. XIV.

Of the Urine, and Excrements of a Horse.

After you have made your Memory acquainted with the Signs and Observations before specified, and so in the end find a Horse, which by the demonstration of some of these Signs, appeareth most certainly to be sick and Diseased: My advice is then, (if conveniently you may, and that the violence of the Sicknes do not urge the contrary) that before you administer any thing unto him, in any case you see his Urine, from which Urine you shall reap these Knowledges.

First, if the Urine of a Horse be of a pale, whitish, yellow colour like unto Amber, and therewithall somewhat strong smelling, and not very clear, then you shall be assured that the Horse is in good state of Body, Strong and Healthfull; but if it be extraordinary White, as it were Creamy, then it is a sign the Horse hath weak Reins, and is subject to the Stone, and the stopping of the Kidneys.

If the Urine of a Horse be somewhat high-Coloured, Bright and Clear like Lamber, and not like Amber, or like a Cup of strong March Beer; then it sheweth the Horse hath Inflammation in his Blood, and that he hath either a Fever, or else some great Surfeit; but if it be Red like Blood, then is his Inflammation more great, and his Surfeit is only an over-heat taken by over-Riding; insomuch, that if present remedy be not applied, either by Scouring, or other healthfull Physick, the Horse cannot chuse but fall into some mortal sickness.

If the Urine of a Horse be of a pale Greenish Colour, thick and slimy, it is a sign of a weak Back, and Consumption of the Seed.

Lastly, if the Horses Urine be high-Coloured, yet therewithall Cloudy, and full of blacknes, then it is a sign that the Horses sickness is *Mortal*, and hardly to be preserved by any *Physick*; but if the *Blackness* and *Cloudiness* of the Urine do not remain, (as it were) bound up together in one Body, but is broken and dispersed, shewing many Clouds in one Water, then it is a sign that the Violence of the sickness departeth away, and there is great hope, by good Government that the Horse will recover his Health as at the beginning.

Now

Now for the Excrements or Dung of a Horse, which is no less worthy of Note than the Urine; you shall first understand, that if his Dung be ever of Alliance with his Food, I mean either in part or whole Coloured like unto that he eateth, as thus for Example. If your Horse go at Grass, his Dung will ever be *green*, and the brighter such *Greenness* is, and being in a mean between Hardness and Softness, the sounder and in more perfect Estate the Horse standeth; but if the *Greenness* be bright, yet the Ordure so soluble and loose, that it cometh from the Horse like Water, then you shall understand, that either the Horse hath eaten up some Feather, or else he hath an inward Coldness both in his Stomack and Bowels.

If a Horses Dung be of a reasonable thicknes, neither too Costive nor to Soluble, yet the *Greenness* inclined to some Blackness, it is a sign that the Horse hath a hot Stomack, and is easily subject either to the *Yellows* or *Staggers*.

If the Horses Dung be in round hard Pellets, and of a Blackish green Colour, like the Dung of a Sheep, or a Deer, then it is without fail, that the Horse hath had some great Surfeit, either by over-Riding, or by ill Food, or else is certainly possess either of the *Yellows*, or *Feaver*, or *Foundring* in the Body.

Now if your Horse be fed only upon Straw, then its Colour will be of a high-Coloured Yellow, rather Costive than Soluble, and the Grain thereof Long, and not well Couched together: And all these be good signs of great Healthfulness; but if the Colour be inclined to Redness, or if it be exceeding Dry without moisture, or if it be Thin, like the Dung of an Oxe or Cow, they all be apparent signs of inward sickness; but if the Redness turn to Blackness, and that his Ordure doth lose the strength of its Smelling, then it is a great Sign of Death and Mortality.

If your Horse be fed with Hay and Provender, then your perfect and sound Dung will be of a Brown yellow Colour, the Grain somewhat long, yet moist and well fixt together; but if the Brownness turn to Redness, it is a sign of distemperature; and if it turn to Blackness, then of Death. Now for the smell of this Dung, you must understand, that the more Provender you give, the greater will be the smell, and the less Provender the less smell.

Lastly, if you feed your Horse only upon Provender, as Bread, Oats, and such like, then the Dung which shews a perfect and a

found Body, will be of a pale yellow Colour, like coarse Honey, firm, like a thick Salve, having within it when you tread upon it or break it little white Grains, like those which are in Sope; or if the Dung be harder, like the ordinary Ordure of a Man, it is not amiss: For both be signs of health and strength; and if the Dung look Red, then it is a sign that the Horse hath taken some inward Heat, and his Stomack and Bowels do rest still inflamed.

If his Dung be Brown and slimy, or if it shine and look greasie, it is a sign that he hath had some of his inward Grease molten, and that it resteth and putrifieth in his Body; but if with his Dung, you see him voyd great clods and lumps of Grease, then you may be assured that his Grease was molten, but Nature hath overcome Infirmitie, and the worst Danger is past already; but if the Dung be matter undigested, so that you may either perceive therein whole Corns, or whole bits of Bread, it is a sign the Horse hath either and a late Sarfeit, or is entering into a Mortal Consumption. Lastly, if his Dung be Black, or have lost the *Smell*, it is an apparent sign of Death. And thus much for Urine and Excrements, and the several knowledges attained by them.

C H A P. XV.

Of Feavers in General, and the divers kinds thereof.

THat Horses have Feavers, and those Feavers of divers and sundry Natures, there is nothing more certain, as by strict Observation may daily be perceived, especially when we use either much Travel, or disorderly Diet: for questionless from these two and none other Heads, do spring most Feavers whatsoever. But first, that I may give you an account what a Horses Feaver is, you shall know that it is an unnatural and immoderate Heat, which proceeding first from the Heart, disperseth it self not only through all the Arteries, but even the Veins of a Horses Body, and thereby hindreth all the Actions and wholesome Motions of the same. Now of Feavers, some *Farriers* make three sorts: The first, those which breed in the Spirits, being inflamed and set on fire beyond the ordinary course of Nature: The second, those which breed in the Humours, being likewise distempred by Heat: And the third, those which breed in the firm parts
of

of the Body, and are continually hot. Now I for your better Memory, will divide them only into two parts, that is to say, Ordinary, and Extraordinary. The Ordinary Feavers, are all those which are bred either in the Spirits, or in the Humours: as namely, *Quotidians*, *Tertians*, *Quartans*, *Feavers continual*, *Feavers heftick*, *Feavers in Autumn*, *Summer* or *Winter*. And the Feavers Extraordinary, are all those which are bred in the firm parts of the Body, and are ever hot, as *Pestilent Feavers*, and the *Plague*, which are ever accompanied with *Ulcers*; and the *Feaver accidental*, which proceedeth from the anguish and pain of some mortal Wound.

Now for the cause, from whence these Feavers do proceed, you shall understand, that all these which I call Ordinary Feavers, do generally spring either from surfeit by extreme Labour, or some surfeit by naughty meat, as *Raw Pease*, *Raw Fitches*, *Raw Oats*, *Mouldy* and *Unwholsome Bread*, and such like: Sometimes they do proceed from the extreme Violence and heat of the Sun Beams, when Travailing with disorderly hast, in the extremest heat of the Day, those two heats mixed together, *Labour*, and the *Sun*, there cannot chuse but be bred in the Horse some *Mortal* inflammation; and for mine own part, I have seen Horses fall down Dead in the High-way: For whose Deaths, I could find no Reason more than their *Labour*, and the heat of the *Sun*. Feavers sometimes spring from a contrary cause, as from extreme Cold, in this manner: When a Horse in the Winter-time hath been Travelled sore all the Day, and is brought into the house hot, if after his blood and inward powers are seled and cooled, you then presently, or the same Night give him cold Water as much as he will Drink, you shall see him out of hand fall unto an extreme Quaking, and from that quaking into a violent Burning, with all other distemperatures of a Feaver.

Now for Extraordinary Feavers, they ever proceed either from Corruption of Blood, or from Infection of the Air; and albeit these Feavers are not usually known unto our *Farriers*, yet they are as common as the former; only the Violence of them is so great, and the Poyson so strong, that they ever carry with them some other Mortal sickness, as namely, the *Staggers*, *Yellows*, *Anticor*, and such like, which never are, but a Pestilent Feaver ever goeth before them: And they, like the Marks of the *Plague*, are seldome seen till the Cures be desperate; and then the unskilfull *Farrier*, neither noting, nor knowing,

knowing, if he did not, the effects of the Feaver, doth ever mis-call the name of the Horses infirmity, and taking the lesser for the greater, fails many times to do the good Office and Cure which he intendeth.

Now the signs to know the Feaver, be these: First he will ever hold down his Head, he will quake and tremble; but when his trembling is past, then will his Body burn, and his Breath be hot, he will Breath fast, and his Flank will beat, he will Reel, he will forsake his Meat, his Eyes will be swoln and closed up, yet therewithall much Watering; his Flesh will as it were fall from his Bones, and his Stones will hang down low; he will oft ly down and rise up again: as his desire will be to Drink; yet at no time drink much, neither will he at any time sleep.

Now for the general Cure of these general Feavers, you shall understand, that some *Farrriers* use to let the Horse blood in the Face, Temples, and Palate of the Mouth, and the first day to give him no Meat, but warm Drink only, by a little at a time: and after the finest Grass, or finest Hey wet in Water, keeping him Warm, and often walking him up and down in a temperate Air, and giving him good store of Litter, then when he begins to mend, to feed him with Barly sodden, huskt and beaten; as you do Wheat before you make Furmety. And this Cure is not amiss; for it agreeth with the Antient experience of the *Italians*: but in our English Horses, (through the Clime, as I suppose) it often faileth.

The best Cure therefore that I have found, is, as soon as you perceive him to begin to shake, to give him the yolks of three or four Eggs, beaten with seven or eight spoonfulls of Aqua-vitæ to Drink, and then chase him up and down till his shaking be past, and then set him up close and warm, and with many Cloaths make him sweat an hour: Let his Food be Oats, very well dried and sifted, and once a day, some wash'd in Ale. If his shaking fit be past, before you perceive his sickness, you shall only give him a pint of *Muskadine*, and an ounce of Sugar-candy beaten to powder, and brewed together to Drink, and so let him rest, feeding him by little and little, as aforesaid, and giving him no Water but such as is warm: and this Order you shall observe at the beginning of every fit, if you can note them, or else every Morning, if his sickness hath no ceasing.

C H A P. XVI.

Of the Quotidian, or every daies Fever, and the Cure.

THe *Quotidian*, or every daies *Fever*, is that which takes a Horse, and holdeth him with one fit once every day; and will at first appear some what Violent, but seldom or never endureth long, if the *Farrier* have any Discretion. It proceedeth most commonly from extreme Riding, either after water, or a full stomach; and then suddenly, after his Heat, being thrust into a Stable, and neither stopt nor rubbed, a suddain Coldness to that suddain Heat, begets a shaking, and so consequently, the effect of a *Fever*.

The signs to know it, are Warrish and Blood-shotten Eyes, short, and hot Breathing, Panting, Loathing of his Meat, and Stiffness in his Limbs; but above these, to know it is a *Quotidian*, you shall observe, that these signs, together with the sickness, will not last above six or eight hours in one day, and then he will be cheerful and in health again, till very near the same hour of the next day, at what time his fit will begin again. And here is to be noted, that the more it altereth the hours, the more hope there is of his health; as if it takes him at seven of the Clock of the one day, and at three of the Clock of the other, and so forth. The Cure is, you shall only during his fit, give him nothing but a sweet Mash made of Malt and Water, being lukewarm, and walk him gently up and down in a temperate Air; then as soon as his fit is past, you shall set him up, and rub his Body and Leggs exceedingly; then four hours after you shall give him this Drink: Take of strong Ale a quart, and boyl therein half a handfull of Worm-wood, of long Pepper and Grains two Ounces, of the best Treacle two Ounces, and of the Powder of dryed Rue one Ounce: Now when a third part of the Ale is consumed, take it from the fire and strain it, then put therein three Ounces of Sugar-candy beaten to Powder; then when it is luke-warm, give it him with a Horn to Drink. Do this twice at the least, or thrice if his fit continue, and there is no doubt but he will Recover.

C H A P. XVII.

Of the Tertian Feaver.

THe *Tertian Feaver*, is that which commeth every other day, holding the Horse with one sick day, and one sound: it is not so Violent as the *Quotidian*, but much longer Lasting; it happeneth ofttest in the Spring time of the year, when Blood begins to encrease, and most commonly to Colts and young horses. It proceeds of the same causes that the *Quotidian* doth, and sometimes of Rankness, and ill Blood. The signs to know it, are all the signs formerly spoken of, and this is the chiefest, that the Horse will be apparently sick, as it were on the Monday, then apparently well on the Tuesday, and sick on the Wednesday following. This *Feaver* is never seen, but it beginneth with shaking. The Cure thereof, is, as soon as you percieve the horse to begin to shake, you shall take a certain Herb, or rather a Weed called Stone-crop, and bruising it in a Morter, take some four Spoonfull of the juyce thereof, and infuse it in a quart of strong Ale, and give it the Horse to Drink: then walk him gently up and down in some temperate Air for an hour, then set him up, and with the help of Cloaths put him into a sweat for an other hour, then cool him; and in any wise, till his fits leave him, let him Drink no Cold Water, and let his Provender be the oldest and driest Oats you can get, only upon his good daies before his fits come, keep him very long fasting and empty.

C H A P. XVIII.

Of the Quartan Feaver.

THe *Quartan Feaver*, is that which some *Farmiers* call a third daies sickness, as thus: If his fits begin on the Monday, he will be well on the Tuesday and Wednesday, and sick again on the Thursday. It proceeds from the same Causes that the *Tertian Feaver* doth, yet in his working is not so apparently Violent, but of much longer Continuance: for if great care and help be not, these *Feavers* will last some a quarter of a year, some half a year, and some a whole year.

year. There needs no other sign to know it, then the coming and going of the fits, as hath been declared already. And for the Cure, it is the self same which is described in the former Chapter, for the *Tertian Fever*: only if his fits do not leave him at the first taking of the Medicine, you shall then give it him again the second time, but not above thrice at the most in any wise.

C H A P. XIX.

Of the Fever Continual.

The *Fever continual*, is that which continueth without any intermission, and it is most dangerous and violent: for there is in it the effects of all the former Fevers, every one taking place as the other endeth: as the *Quotidian* beginning, is persued by a *Tertian*, and a *Tertian* by a *Quartan*, and those two supply so many hours till the *Quotidian* doth begin again. This kind of Continual Fever, most often springeth from some inflammation or Violent heat ingendred in the Principal Members about the Heart: and the signs thereof are want of Rest, and falling away of the Flesh, beside certain Inflammations or swellings, which will appear about his Withers and Flanks. The Cure is, first to purge his Head by sneezing, the manner whereof you shall find in a particular Chapter hereafter: which done, you shall give him this Drink, take of *Jermander* two Ounces of *Gum Tragacant*, and dried *Roses*, of each half an Ounce, beat them into fine Powder, and put them into a quart of Ale, adding thereunto, of *Oyl-Olive* two Ounces, and as much *Honey*; and when it is lukewarm, give it the Horse to Drink: then walk him a little space, and after set him up Close and Warm, keep him from Cold water, and let his Provender be dry Oats.

C H A P. XX.

Of the Heetick Fever.

The *Heetick* Fever in Horses, is a dangerous and mortal Fever, being in a Horse the first Original breeder of a Consumption; it is a certain Hot and Dry Humour, which runneth between the

skin and the Flesh, proceeding from a sick Stomack, which having been scalded with hot Drink, (as those ill Directed Running Horses be, which feed upon much Spice, or those which take hot Drenches upon every foolish and slight occasion) hath almost clean lost the power of Digestion: It sometimes happens to those Horses which Men too carefully teaching to Drink Beer and Wine, do so continually apply them thereunto, that in the end they become subject to this sickness. The signs to know it; the Horse will never eat with any appetite, and when you draw out his Tongue, you shall find it raw, and almost scalded; his Flesh will be loose and Flabby, and his Body subject to a continual Trembling. The Cure is, first wash his Tongue either with the sirrup of Mulberries, or with Allom, Running water, Sage and Woodbind Leaves boyled together, then give him fasting in a morning this Drink; Take of Aloes one Ounce, of Garlick half an Ounce, of Licoras and Anniseeds of each a Dram, beaten to powder, and let him drink it with a quart of white Wine, luke-warm, and made sweet with Sugar-candy or Honey: let him drink no Drink, but warm mashes of Malt and Water, and let his meat be sweet Hay, or green Corn blades: and ever after his Medicine, let him be chafed a little, kept fasting two or three hours, and stand warm and well cloathed.

C H A P. XXI.

Of the Feaver taken in Autumn, or the fall of the Leaf.

ALL these Feavers before spoken of, do for the most part, commonly happen to Horses in the Spring-time of the year, by reason that the new Blood is ever aptest to be inflamed: yet notwithstanding, we find by Experience, that Feavers will sometimes come at the fall of the Leaf, which we call *Autumn*, and they are of a longer continuance than the other. The signs are none other but such as I have already declared: For they are the same Feavers, only altering the time of the year. If therefore your Horse do chance to catch a Feaver at the fall of the Leaf, you shall let him Blood on his Neck-vein, and in the Palate of his Mouth, and you shall give him to drink the same drink which is formerly set down for the Feaver continual, and there is no doubt of his Recovery.

C H A P. XXII.

Of the Feaver taken in the Summer-season.

A Feaver taken in the Summer season, is the worst of all Ordinary Feavers whatsoever, especially all such as are taken in the Dog dayes, because according to the opinion of Farriers, all accidents are then most furious: the especial signs of this Feaver are, that his Arteries will beat most palpably, and wheresoever he staletch, there you shall perceive he sheddeth his Seed also. The Cure, according to the Antients, is to let him Blood in the great Vein which he hath on his hinder Haunch, almost four inches beneath his Fundament; but for mine own part because that Vein is not easily found by every ignorant Smith, and that many times by mistaking, they may cut the Artery, instead of the Vein, I hold it fully as good to let him Blood on the Neck-vein, which done, give him this Drink two hours and a half after; take the juyce of a handfull of Purslane, and mix it with Gun-Tiagacant, Anniseeds, and Damask Rose-leaves beaten to Powder; then put them into a quart of Strong Ale, made sweet either with Sugar-candy, or Honey, and fail not to give him this Drink three mornings together, keep the Horse warm during his Sicknes.

C H A P. XXIII.

Of the Feaver taken in the Winter-season.

A Feaver taken in the Winter, is not so dangerous to the Life of a Horse, as the Feaver before mentioned; yet it is a Feaver which will continue long, and ask great Circumspection in the Cure: the causes thereof, are the same which are formerly described; and the signs are no other than hath been already declared. Touching the Cure, it is thus: you shall first purge his Head by making him sneeze, that done, you shall let him Blood both in the Neck and the Palate of the Mouth, and then two hours and a half after give him this Drink. Take of Rue three Ounces, of round Pepper half an Ounce, of Bay-berries, and the seed of Smallage, each half an Ounce,

boyl these in Waite Wine, and give it him to Drink luke-warm. Other Farriers use to take a pint of new Milk, and to put therein two Ounces of Sallet-Oyl, of Saffron one scruple, and of Myrrh two scruples, of the seed of Smallage a spoonful, and to make him drink it lukewarm; but the Horse which taketh this Drink, must be good in strength, for if he be brought low, it is somewhat too strong.

The Ancient *Italians* did use for this Feaver, to give this Drink: Take of *Aristolochia* half an Ounce, of *Gentian*, of Hyssop, Wormwood, of Southern-wort, of each half an Ounce, of dry fat Figs three Ounces, of the seed of Smallage an Ounce and a half, of Rue half an handfull, boyl them all with running water in a clean Vessel, till almost half be consumed; then when it begins to thicken, take it from the fire, strain it, and give it the Horse luke-warm. Now there are not any of these Drinks but are sufficient for the Cure; but the first is best. Now for his Diet, be sure to keep him fasting long before his fits come, and let his drink be only warm mashes of Malt and Water. Now if you perceive that his fits continue, and bring the Horse to any weakness, you shall then to comfort and quicken the natural heat of the Horse, rub and chafe all his Body over, either in the Sun, or by some soft Fire, with some wholesome Friction, of which Frictions you shall find choice in a particular Chapter hereafter following, together with their several natures and uses.

C H A P. XXIV.

Of the Feaver which cometh by Surfeit of meat only.

THe Feaver which cometh by Surfeit of meat only, without either Disorder in Travel or Corruption of Blood, is known by these signs: the Horse will heave and beat upon his Back, his breath will be Shorr, Hor, and Dry, and his Wind he will draw only at his Nose with great Violence. The Cure therefore is, you shall let him Blood in his Neck, under his Eyes, and in the palate of his Mouth, you shall also purge his Head by making him sneese, then keep him with very thin Diet, that is, let him fast for more than half of the day, and let him not drink above once in four and twenty hours, and that drink to be warm Water: you shall also once or twice chafe his Body with a wholesome Friction; and if, during his Cure,
he

he chance to grow Costive, you shall cause him to be raked, and afterward give him either a Suppositary, or a Clister, of both which, and of their several natures, you shall read sufficiently in a Chapter following.

C H A P. XXV.

Of Feavers extraordinary, and first of Pestilent Feavers.

WE find by many Ancient *Italian* Writers, that both the *Romans*, and others their Countrymen, have by experience found many Horses subject to this Pestilent Feaver, which is a most contagious and pestiferous Disease, almost incurable; and for mine own part, I have seen it in many Colts and young Horses. Surely it proceedeth, as I judge, either from great Corruption of Blood, or from Infection of the Air. The signs thereof be, the Horse will hold down his Head, forsake his Meat, shed much water at his Eyes; and many times have swellings, or Ulcers rising a little below his Ear roots. The Cure is, first you shall not fail to let him Blood in the *Neck-vein*: then two or three hours after you shall give him a Clister: then make him this Plaster: Take of Squilla five Ounces, of Elder, of *Castoreum*, of Mustardseed, and of *Enforbium*, of each two Ounces; dissolve the same in the juice of Daffodill and Sage, and lay it all about the Temples of his Head, and between his Ears: then give him to drink for three or four dayes together, every Morning, two Ounces of the best Treacle dissolved in a pint of good *Muskadine*.

The *Italians* use to give him divers Mornings, a pound of the juice of Elder, roots, or instead of his Hay, a good quantity of that Herb which is called *Venus hair*; but if the time of the year be such, that they cannot have it green, then they boyl it in water and strain it, and give it him to *Drink*: but I hold the first *Drink*, to be most sufficient, his Diet being thin, and his keeping Warm.

C H A P. XXVI.

Of the Plague or Pestilence in Horses, of some called the Gargill or Murrain.

THis Pestilence, Murrain, or Gargill in Horses, is a contagious and most infectious Disease, proceeding either from surfeit of Heat, Cold, Labour, or Hunger, or any other thing breeding Corrupt Humours in a Horses Body, as the holding too long of his Urine, drinking when he is hot, or feeding upon gross, foul, and Corrupt Foods, as in low Grounds, after Floods, when the Grass is unpurged, and such like. Sometimes it springs from some Evil influence of the Planets, corrupting the Plants and fruits of the Earth, and Cattel too sometimes, and from divers other such like Causes; but howsoever, when the Disease beginneth, certain it is, that it is most infectious, and if there be not care and prevention used, of Multitudes it will not leave one. Nor any of the Antient *Italian* Farriers, nor any of our *English* Farriers that I have met with, do or can shew me any sign or token to know this Disease, more then that one or two must first Dye, and then by their Deaths I must adjudge and prevent what will follow; but they are mistaken: For this Disease is as easily known by outward signs, as any Disease whatsoever; as namely, the Horse will begin to lower and hang down his Head; and within two or three days after such lowering, you shall see him begin to swell under his Ear roots, or under the roots of his Tongue, and that swelling will run universally over all one side of his Face, being very extreme hard and great. Moreover, all his Lips, Muck, and Whites of his Eyes will be exceeding yellow, and his Breath will be strong, and stink exceedingly.

The Cure of this Disease, according to the manner of the *Italians* and *French men*, is, first to separate the sound from the sick, even a far distance from that Air where the sick Breathe; then let him Blood in the Neck veins, and give every one severally to drink, two spoonfull of the powder of *Diapente*, brewed in a pint of strong *Sack*, of the composition of which *Diapente*, and of the particular Vertues thereof, you shall read in a Chapter following. If you cannot readily get this, *Diapente*, you may then take a pint of *Muskadine*, and dissolve

dissolve into it two Ounces of the best Treacle, and it will serve the turn. Questionless these Medicines are both exceeding good; for they are great Preservatives against all infections.

Now that which I have found far to exceed them, and to be most Excellent, not only for this Plague amongst Horses, but for the Plague or Murraïn, (of some called the Mountains-evil) amongst Beasts, is this; Take a good quantity of old Urine, and mix therewithal a good quantity of Hens Dung, stir them well together till the Dung be dissolved: then with a Horn give to every Horse or Beast a pint thereof lukewarm. This have I seen help hundreds.

C H A P. XXVII.

Of the Fever accidental, coming by some Wound received.

IF a Horse shall receive any grievous and sore wound, either by stroke or thrust, by which any of the Vital Powers are let or hindered, certain it is, that the pain and anguish of such Wounds will bring a Horse to a hot Fever, and then his Life is in great danger: Besides, a Horse being naturally subject to moist Distillations in his throat, there will many times rise therein great Swellings and Ulcers, through the pain whereof, a Horse will fall into a burning Ague.

The signs whereof are, that he will cover much to drink, but cannot drink, and his flesh will fall away in much extraordinary fashion.

The Cure, besides the remedies before mentioned, is, to let him Blood under his Ears, and in the Mouth: And then to take a fine Mancher, and cutting it in slices, steep it in Maskadine, and compell him to swallow them: It shall also be good, if once in three dayes you steep your Mancher in Sallet Oyl, and make him eat it. As for his drink, let it be only warm Mashes of Malt and Water, which if he cannot drink, you shall then give it him with an Horn. And thus much touching Feavers both ordinary and extraordinary.

C H A P. XXVIII.

One general, certain, and approved Cure for all the Feavers and Sickneses formerly rehearsed, never yet disclosed from the Authors breast.

I Have in the former Chapters shewed you the Names, Diversities, Natures, Signs, and ordinary Cures for all sorts of Feavers whatsoever: Now because I know the Ignorance of some so great, that they cannot discern; the Sloth of others such, that they will not endeavour to discern; and the Folly of many so peevish, that they will mistake what they may discern: I wil shew you here one general, certain, and approved Medicine, for all Feavers of what Nature or Violence soever:

When therefore at any time you shall find by any of the Signs formerly rehearsed, that your Horse droopeth, you shall presently let him Blood in the Neck-vein, and let him bleed well, then three Mornings together after (the Horse being fasting) give him half an Ounce of the Powder called *Diapente*, (the Composition whereof you shall find in a particular Chapter, together with the Vertues,) and this *Diapente* you shall brew in a pint of Muscadine, and so give it the Horse to drink with an Horn: then let him be Ridden or Walked abroad for an hour; after he cometh in, give him any meat whatsoever that he will eat. At noon give him a sweet Mash. In the Evening perfume his Head with a sweet perfume: The Composition whereof you shall find in a particular Chapter; at Night rub all his Limbs well with hard Wisps, and his Head and nape of the Neck with a coarse harden Rubber, then feed as aforesaid. And thus do 3 dayes together, and without doubt health will come suddainly.

C H A P. XXIX.

Of the Diseases in the Head.

AS a Horses Head is composed of many parts, so are those many parts subject to many and sundry grievances, as namely, the Panicles or thin Skins, which cleave to the Bones, and do cover the whole

whole Brain, are subject to Head-ach, Meagrim, D z n e s s, and A m e z e s; the whole Brain it self is properly subject to breed the F e a s t e, Madness, Sleeping evil, the taking and forgetfulness. And here is to be noted, that many Farriers, and those of approved good skill, have strongly held Opinions, that Horses have very little, or no Brains at all: And my self for mine own part, being carried away with their Censures, did at last, upon good Consideration, cut up the Heads of divers Horses, some Dead, some in Dying, and could never find any Liquid or thin Brain, as in other Beasts, but only a very thick, strong, tough, and shining substance, solid and firm, like a tough jelly, which I ever held to be only a Panicle, and so resolved with others, that a Horse had no Brain: but after, upon further Discourse with Men of better Learning, I had this Resolution given me: That a Horse being a Beast of extraordinary strength and ability, made even to endure the worst of all extremities, either by sore Labour, or heavy Burchen, that Nature in his Creation had endowed him with Members answerable to such Vigour: As namely, that his Brain was not liquid and moist, as subject to fleet, or to be distempered with every small disorder, but tough and hard, even unpenetrable, and not to be pierc'd by any reasonable motion. And for the Panicles, they shewed me those thin skins over and besides that great substance: so that by experience I saw, and now know, that a Horse hath both Brain and a Panicle, and in them two are bred the Diseases before mentioned. Now in the Ventricles, or Cels of the Brain, and in those Conduits by which the lively Spirits give feeling and motion to the Body, there to breed the Turn sick, or Sturdy, the Staggers, the falling evil, the Night mare, the Apoplexic, the Palsie and Convulsion, or Cramp, the Catharre, or Rheum, and lastly the Glanders. And thus much of the Head in general.

C H A P. XXX.

Of Head-ach, or pain in the Head.

THe Head-ach is a pain that cometh either of some Inward cause, or of some Choleric Humor gathered together in the Panicles of the Brain, or else of some extreme Heat or Cold, or of some suddain Blow, or of some noisome Savour. The signs are, the

hanging down of the Horses Head and Ears, dropping of his Urine, dimness of sight, swollen and watrish Eyes. The Cure according to the opinion of some of our English Farriers, is to let him Blood in the Eye-veins, and to squirt warm Water into his Nostriils; and for that day give him no meat; the next Morning fasting, give him warm Water, and some Grafs: at night give him Barley and Fitches mixt together, and so keep him warm till he be sound: But this Cure I do not fancy. The best help is, first to make him sneez by Fuming him, then let him Blood in the Palate of the Mouth, and keep him fasting at the least twelve hours after: then pour into his Nostriils Wine, wherein hath been sodden *Euphorbium* and *Franchin-cense*, and after feed him and keep his Head warm.

C H A P. XXXI.

Of the Frenzy, and Madnes in a Horse.

THE Madnes of a Horse, by the most antient and best approved Farriers, is divided into four Passions: The first is, when some naughty Blood doth strike the Panicle of the Brain but in one part only, it presently makes the Horse dull both of mind and sight: and you shall know it by this sign, the Horse will turn round like a Beast that is troubled with the Sturdy: the Reason being, because the outside of the Head is grieved only. The second is, when the Poyson of such Blood doth infect the middle part of the Brain: Then the Horse becometh Frantick, leaping against Walls or any thing. The third is, when that Blood filleth the veins of the stomach, and infecteth as well the Heart as the Brain: then he is said to be mad. But the fourth and last is, when that Blood infecteth not only the Brain and Heart, but even the Panicles also, and then is he said to be stark Mad, which you shall know by his Biting at every Man which comes near him, by his gnawing of the Manger and the Walls about him. And lastly, by tearing his own skin in pieces.

Now for the Cure, you shall cause him to be let Blood in all the lower parts of his Body, to draw the Blood from his Head; as namely, on the Shackle-veins, the Spur-veins, the Plat-veins, and the Thigh-veins, and you shall let him Blood abundantly, then give him this Drink: take the Root of wild Cucumber, and where that cannot

cannot be gotten, take a handfull of Rue or Mints, and a handfull of black Elleborus, and boyl then in strong Red Wine, and give it luke-warm to the Horse in a Horn.

Some use to give Mans Dung with Wine, three Mornings together: and also to rubb his Body over with a Friction at least twice a day, and not to fail to give him moderate Exercise.

Others use to pierce the sk'n of his Head with a hot Iron, to let out the ill Humours.

Others as the most certain of all Medicines, use to Geld him of both, or one Stone at the least, but I like it not for mine own part.

The Cure I have ever used for this grief, was either to make him swallow down hard Hens Dung, or else give him to drink, the Root of *Virga Pasteris* stamped in Water, and for his ordering during the Cure, I would have his stable quiet, but not close, and his food only warm Mashs of Malt and Water, yet but a very little at one time, for the thinnest Dyet is best.

C H A P. XXXII.

Of the Sleeping Evil, or Lethargy in a Horse.

THe Sleeping Evil, is an infirmity which maketh a Horse to sleep continually, depriving him thereby, both of Memory, Appetite, and all Alacrity of Spirit. It is most incident to White and Dun Horses, because it proceedeth only from *Flegm*, cold and gross, which moistneth the Brain too much, causeth heaviness and sleep: there needs no other sign more than his sleeping only. The Cure is, to keep him waking whether he will or no, with great noises and affright; then let him Blood in the Neck, and the Palate of the Mouth, and give him to drink Water luke-warm, wherein hath been boyled Camomil, Mother wort, Wheat, Bran, Salt, and Vineger: you shall also perfume his Head, and make him sneeze, and anoint the Palate of his Mouth with Honey and Mustard mixt together: It shall not be amiss, if with the ordinary Water which he drinketh, you mix either Parsley seed, or Fennel seed, for that will provoke Urine: you shall also bath his Leggs, and stop his Hoofs with Bran, Salt, and Vineger boyled together, and applied as hot as may be, and his Stable would be lightsome and full of noise.

C H A P. XXXIII.

Of a Horse that is taken, or of Shrow-running.

THese Horses are supposed by Farriers to be taken, or as some call it, Planet-strook, which are deprived of feeling or of moving, not being able to stir any Member, but remain in the same form as they were at their time of taking. Some hold it proceeding of Cholera and Flegm, when they are superabundantly mixt together, or of Melancholy Blood, which being a cold dry Humour, doth oppress and sicken the hinder part of the Brain. Other ancient Farriers hold, it cometh of some extreme cold, or extreme heat, or raw digestion, striding into the empty Veins suddenly: or else of extreme Hunger caused by long fasting. The signs thereof are numbness, and want of motion before spoken of: As for the cause, it is diverse, for first you must note, whether it come of cold or heat: If it come of Cold, you shall know it by the stuffing and poze in the Head, which is ever joyned with the Disease: if of Heat, by the hotness of his Breath, and clear fetching of his Wind. Now if it proceed from Cold, you shall give him to drink one Ounce of *Laserpitium* mixt with Sallet Oyl and Muskadine luke-warm: if it proceed of Heat, you shall give him one Ounce of *Laserpitium* with Water and Hony luke-warm: but if it proceed of Crudity, or any raw digestion, then you shall help him by fasting: and if it proceed of Fasting, then you shall heal him by feeding him often with good Meat, as with wholesome Bread, and dry oats; yet but a little at a time, that he may ever eat with a good stomach.

Now for the French Farriers, as Monsieur *Horace* and the rest, who call this Disease *Surpris*, they hold, it cometh only from Cold causes, following Hot accidents, and they use for their Cure to let him blood on the Breast veins, and then put him into a sweat, either by Exercise, or multiplicity of Cloaths, but many Cloaths are better, because the Horse is not capable of Labour: and sometimes they will bury him all save his Head in an old Dunghill, till through the Heat thereof his Limbs receive such feeling, that he begins to struggle out of the same. All which Cures are not much to be commended: Yet in mine Opinion, this is the best, easiest, and surest way: First, to let him blood in the Neck and Breast, then to anoint all his

his Body with Oyl *Petroleum*, then give him this drink. Take of Malmsey three pints, and mix it with a quartern of Sugar, Cinamon, and Cloves, and let him drink it lake-warm, then take old rotten wetlitter, and for want thereof, wet Hsy, and with Cloaths, Sur-fingles and Cords, swaddle all his whole Body over with the same of a good thickness, and renew it once in three days till he be whole; let his Stable be Warm, his Exercise moderate, and if he grow Col- sive, let him first be raked, and after give him either a Clyster, or a Suppository, according to his strength. There is also another kind of taking, and that is, when a Horse is Planet-strook, or Stricken with Thunder: but it is utterly incurable, and therefore I will omit to speak further of it. The last kind of taking is when a Horse is Shrow-run, that when a Horse lieth sleeping, there is a certain venomous field-Mouse called a Shrow, whose Head is extraordinary long, like a Swines Head, and her Feet shorter of the one side than the other. This Mouse if she happen to run over any of the Limbs of the Horse, presently the Horse loseth the use of that Limb she ran over, and if she run over his Body, he commonly loseth the use of his hinder loins: and these accidents having been often found unexpected, common Farriers have held the Horse to be taken, or Planet-strook. As for the Cure thereof, the best is to seek out a Brier, which groweth at both ends, and take the Horse or Beast that is thus vexed, and draw him under the same, and it is a present remedy. For mine own part, I have heard much, both of the Infirmity, and of the Cure, but I have had no Experience of it, but only in one young Foal, which being suddenly Lame, was as suddenly helped, to my much Contentment.

C H A P. XXXIV.

Of the Staggers.

The *Staggers* is a dizzy madness of the Brain, proceeding from corrupt Blood, or gross, tough and heavy Humours, which oppresse and make sick the Brain, and from when e proceedeth a vaporous Spirit, dissolved by a weak heat which troubleth all the whole Head: it is almost of all Diseases the most common, yet very mortal and dangerous: it commeth many times from surfeit of Meat, surfeit of Travel, or from corruption of Blood. The signs to know it is

Dimness

Dimness of sight, swollen and watrith Eyes, a moist Mouth, staggering and reeling of the Horse, and beating of his Head against the walls, or thrusting it into his Litter. The Cure is divers: for almost every Smith hath a several Medicine, yet these which I shall rehearse, are the most approved. The ancient Farriers, both *Italians* and *French*, use to let the Horse blood in the Temple-veins, and then with a Knife make an hole an inch long over-thwart his Fore-head, underneath his Fore-top, and raising the skin up with a Corner, some two or three inches about, stop the hollownes with a tent dipt in Turpentine and Hogs grease molten together; but some of our Smiths finding this Cure fail, except the Disease be very young, use to stop the hollownes with Dock roots. Others with a Clove or two of Garlick. Others use for this Disease to take Selladine, and stamping it to stop it into his Ears, and so tye up his Ears, or stick the tips of his Ears together, that he may not shake the Medicine out. Others use to mix Salt and Water together thick, and to put it into his Ears. Others use to mix *Groundfill* and *Aqua-vitæ* together, and to put that into his Ears. Others use to take Garlick, Rue, and Bay Salt, and beat them grossly, then mix Vinegar with them, and put it into the Horses Ears, then wet Wool or Tow in the Medicine, and stop that in his Ears also: let the Medicine rest so four and twenty Hours, and if he forsake his Meat, wash his Tongue with Vinegar, and it will recover his stomack. Others use first to perfume the Horses Head, to make him sneese, then to take half a handful of Selladine, and as much Herb-of-grace, three or four Cloves of Garlick, and a little Bay Salt, and stamp them together: then mix therewith two or three spoonfuls of Vinegar or Verjuyce, and thrust it hard into the Horses Ears: then tye up his Ears with a soft inkle string, that no Air may come in, and let this Medicine remain the space of a Day and a Night: then let him Blood in the Neck-vein, and give him a comfortable Drench, of which Drenches you shall find great plenty, together with their uses, in a Chapter following. There be some Smiths which only take Rue and Salladine, of each a like quantity, and stamping them with white Salt, thrust it into the Horse Ear, and it helpeth. Others take an Ounce and a half of the Oyl of bitter Almonds, two drams of Oxe-gall, an half penny in black Ellebor stamped, and five drams of the grains of Castoreum, Vinegar, and Verjuyce, seeth them altogether till the Vinegar be consumed, then strain them,

them, and put it into the Horses Ears. All these Medicines have been divers times approved to be singular good, and for mine own part, I have found great effects in them: Yet that which I have found at all times most Excellent, is, if the Disease be young and early taken, (that is, before the Horse be grown into an extremity of Weakness) to take only Verjuice and Bay Salt, and mixing them well together, to stop it into the Horses Ears. But if the Disease be old, and the Horse brought to a desperate state of mortality, then you shall take Assafetida, and having dissolved it in Vinegar, warm it upon a Chafingdish of Coals, and with round balls of Tow, stuff it hard into the horses Ears, and so bind them up for four and twenty hours, after which time give him a comfortable drink. Now whereas some Smiths do use to stamp *Agua-vite* and Garlick together, and stop that into his Ears: I for my part, think it too strong, except the Horse be in great lust, and full of flesh, which if he be, doubtless it may do well enough: only for a general Rule you must observe, ever to let the Horse blood in the Neck-vein, two or three Mornings together, and every time to great abundance of Blood from him.

C H A P. XXXV.

Of the Falling Evil.

THis Falling Evil, or as the Italians call it, this *Malcaduco*, is nothing else but that which we call in Men the *Falling sickness*, in Beasts the Falling evil: for it doth for a certain Season, deprive them of all sense whatsoever. It is a Disease not commonly incident to our English Races, but amongst the Italian, Spanish, and French Horses, many times found.

Now considering that the most of our best *English* Stables are furnished even with some horses of these Countries, I think it good to write something touching the Disease. It proceeds from cold and gross Flegm, gathered together in the Fore-part of the Head, betwixt the Panicle and the Brain, which being by any hot Vapour dispersed over the whole Brain, it doth instantly cause this falling. There be others which suppose that it is governed by the Moon; and that by a certain course thereof, both horses and other Beasts do fall, and

as it were die for a small time. The sign to know the Disease, is, the horse will fall suddainly, both through the Resolution of his Members, and the Distension of his Sinews, all his Body will quake and quiver, and they will foam much at their Mouths, yet when you think them past all hope of Life, they will still stare up suddenly and fall to their Mear. Now if you will know whether these fits will come often, or but seldome, you shall feel the Gristle betwixt his Nostrils, and if it be Cold, he will oft; but if it be Warm, he will fall seldome. The Cure is, you shall first let him Blood in the Neck-vein, taking good store of Blood away: then within four or five dayes after, you shall let him Blood on his Temple-veins, and on his Eye-veins: then anoint all his Body over with a comfortable Friction, then bathe his Head and Ears with Oyl de Bay, liquid pitch and tar mixt together, and of the same put some into his Ears: then make him a Cap or Biggin of Canveale, quilted with Wool to keep his Head warm: then give him a purgation or scouring, of which you shall find plenty in a Chapter hereafter: you shall also force him to sneeze: but if the Disease notwithstanding continue still, you shall then with a hot Iron pierce the skin of his Fore Head in divers places, and after anoint it with sweet Butter, for thereby you shall draw out the gross Humours which do oppress the Brain, and in any wise during the time that he remaineth in Physick, let his Stable be kept exceeding warm, and his Dyer thin.

C H A P. XXXVI.

Of the Night-mare.

THIS Disease which we call the Night-mare, is an infirmity which only troubleth the horse in the Night-season, stopping the drawing of his Breath, in such Violent sort, that with the struggling and striving he will be driven into a great sweat and faintness: It Proceedeth, according to the opinion of ancient Farriers, from a continuall Crudity, or raw Digestion of the Stomack, from whence gross Vapours ascending up into the Head, do not only oppress the Brain, but all the Sensitive parts also. Now for my part, I rather hold it an infirmity of the Stomack and inward Bowels, which being cloyed with much Glut and Fat, doth in the Night-season so hinder
the

the Spirits and Powers from doing their Natural Office, that the Beast having, as it were, his Breath strangled, doth with an unnatural struggling in his sleep, put his Body into an extreme sweat, and with that Passion is brought to much faintness; of which I have had much and continual Experience, not only in Horses, exceeding fat, and newly taken from the Grass, but especially from such horses as are either fattened upon Eddish Grass, which in some Countries is called after Mathes; or such as are taken up fat in the Winter-season. The signs to know this Disease, is, that in the Morning when you come early to your horse, you shall find him all of a great sweat, and his Body something panting; or perhaps you shall but only find him sweat in his flanks, upon his Neck, and at the Roots of his Ears: either of both are signs of this sickness, especially if at Night when you litter him, if you find that he is dry of his Body, and giveth no outward sign of inward sickness. Now there be some that will Object against me, and say, that this Infirmary is not the Night-mare, but an ordinary Infirmary ingendred by superfluity of Cold, Gross, and unwholsome Food, got in the Winter-season; which nature, through the help of warm Cloaths, and a warm house, expells in this manner, in the Night-season. To this Objection I answer, that if they do disallow this sickness to be the Night-mare, that then without Contradiction, there is no such Disease as the Night-mare at all, and that it is but only a Name without any substance or consequence; but forasmuch as this sickness is not only very usual, but also carrieth with it all the effects and attributs ascribed unto the Night-mare, and that it is as yet a Disease unnamed, I do not think I can give it a more proper term than to call it the Night-mare. The Cure whereof is, every Morning and Evening, both before and after his water, to give the Horse some moderate Exercise, as to make him go at least a mile and more for his water; and after he is Watered, to Gallop him gently on the hand a good space: then when he is brought into the house, and well Rubbed, to give him his Provender, (being Oats) and to mix therewith a handfull, or better, of Hempseed; only in this Cure you must be carefull, that your Exercise do not enforce him to Sweat, nor shall you have need to use it longer, than you find that he sweateth much in the Night-season. This Exercise and Medicine will not only Cure this infirmary, but also any Cold that is newly gotten whatsoever.

C H A P. XXXVII.

Of the Apoplexie, or Palsie.

THese Palsies or Apoplexies which happen unto Horses, are of two sorts: the one general, the other particular. The general Palsie is, when a horse is deprived of all sense, and moving, generally over his whole Body, which is seldome or never found out by our Farriers: because the mortality and suddenness of Death which pursues the Disease, takes from them, all Notes and Observations of the Infirmity: and indeed, for the general Palsie, there is no Cure, and therefore there needs no Description of sign or cure. For this particular Palsie, that is, when a horse is deprived but of some part or member of his Body, and most commonly it is but the Neck only, as both my self and others have found by daily Experience. This Disease proceedeth from foulness of food, or from fen-feeding, which breedeth gross and tough Humours, which joynd with Crudities and raw Digestions, oppress the Brain violently altogether: it also commeth many times by means of some Blow or Wound given upon the Temples of the Head. The signs to know the Disease are, the gathering together of his Body, going crookedly, and not straight forward, but seldome, and holding his Neck awry without motion: yet never forsaking his Provender or Meat, but eating it with greediness, and much slavering. The Cure is to, let him Blood on his Neck-vein, and Temple-vein, on the contrary side to that way he wryeth: then annoint all his Neck over with the Oyl Petrolium, and with wet Hay Ropes swaddle all his Neck over, even from his Breast to his Ears, but having before splented his Neck strait with splents of Wood, made strong, smooth, and flat for the purpose: then for three Mornings together, give him a pint of old *Muskadine*, with two Spoonfull of this Powder to drink. Take of *Opopanax* two Ounces, of *Scorax* three Ounces, of *Gentian* three Ounces, of *Manna Succary* three Ounces, of *Myrrh* one scruple, and of long *Pepper* two scruples, beat all these into fine powder.

Now there be some Farriers, which for this Disease use to draw the Horses neck on the contrary side with a hot Iron, even from the Neck to the Shoulder, and on the Temple of his Head of that side also,

also, a long strike, and on the other a little Star in this manner +, and from his Reins to his middle Back, small lines in this manner 

But I that know this sickness proceedeth from the Brain and Sinews, cannot conceive how any help should come from burning of the skin, that is drawn up and straightned: And therefore I would with every Farrier to forbear this tormenting, unless he apparently see, that the skin it self through dislike and weakness, is shrunk also, and then the Cure is not amiss.

C H A P. XXXVIII.

Of the general Cramps, or Convulsion of sinews.

These general Cramps, or Convulsion of sinews, are most forcible Contractions, or drawings together of the sinews, and muscles: and they happen sometimes generally into many parts of the Body, sometimes particularly, as but into one Member and no more: When they are generally disperst in horses, they proceed commonly from some wound, wherein a sinew is half cut and no more, and so there runneth a general Contraction over the whole Body by degrees. When they are particular, as but in one Member, then they proceed either from Cold windy causes, or from the want of Blood. For the general Contraction which cometh by a wound, you shall read the Cure thereof in the Book of Chirurgery following, where the sinew being cut in two pieces, the Contraction ceaseth. For this particular, where but one Member is grieved, you shall know it by these signs: the Member will be stark and stiff, insomuch that neither the Beast, nor any Man will be able to bow it: the sinews will be hard like sticks, and the horse being down, is not able to rise during the time of the Contraction, he will also halt extremely whilst the fit is upon him, and presently go well again, as it were in one moment. The Cure is, to chafe the member exceedingly, either with Linseed Oyl, Sheeps foot Oyl, or Neats foot Oyl, and during the time of his chafing, to hold up the contrary Foot that he may stand upon the Limb which is most pained. There is also another Cramp or Convulsion of sinews, which doth extend into the Neck and Reins of the Horses back, and so almost universal over the horses

whole Body; It proceeds ever, either from some extreme Cold, as by turning a Horse suddenly out of a warm Stable, and warm Cloaths, into the piercing rage of the Cold Winter, or by the loss of Blood, whereby great Windiness entrench into the Veins, and so benummeth the sinews: or else by too much Physicking and Drenching of a Horse, whereby the natural Heat is much Weakned or Dried. The signs of this Convulsion be, his Head and Neck will stand awry, his Ears upright, and his Eyes hollow, his mouth will be clung up that he cannot Eat, and his Back will rise up in the midst like the Back of a Camel; the Cure hereof is, with great store of warm woollen Cloaths, as Blankets, and Coverlids, some folded double about his Body, and some girded all over from his Head to his Tail, to force him into a sweat; but if the Cloaths will not force him to sweat, then you shall either fold all his Body over with Hot wet Horse Litter, or else bury him all save the Head in a Dunghill or Mixon; then when he hath sweat an hour or two, and is moderately cooled, you shall annoint him all over with this Oyntment, (holding hot Barrs of Iron over him, to make the Oyntment sink into his Body:) Take of Hoggs-grease one pound, of Turpentine a quarter of a pound, of Pepper beaten into powder half a dram, of old oyl Olives one pound; boyl all these together; and use it being made warm. There be other Farriers which use this Oyntment: Take of new Wax one pound, of Turpentine four Ounces, of Oyl de Bay as much, Opoponax two Ounces, of Deers suet, and of Oyl of *Styrax* of each three Ounces, melt all these together, and use it warm.

There be others which use, after his sweat, nothing but Oyl of *Cypresse*, or of *Spike*, and Oyl de Bay mixt together, and with it annoint his Body over. After this Uction thus applied, you shall take twenty grains of long Pepper beaten into fine Powder, of Cedar two Ounces, of *Nitre* one Ounce, of *Laserpitum* as much as a Bean, and mingle all these together with a Gallon of white Wine, and give him a quart thereof to drink every Morning for four dayes. Now for his Diet and Order, let his Food be warm Mashes, and the finest Hay, his Stable exceeding Warm, and his Exercise gentle walking abroad in his Cloaths, once every day about High-noon.

C H A P. XXXIX.

Of the Cold or Poze in the Head.

THE Cold or Poze in a Horses Head is gotten by divers suddain and unseen means, according to the Temper and Constitution of the Horses Body, insomuch, that the best keeper whatsoever cannot sometimes warrant his Horse from that Infirmity. Now according as this Cold is old or new, great or small, and according to the abundance of Humours which abound in the head, and as those Humours are of thickness or thinness, so is the Disease and the danger thereof greater or lesser, stronger or weaker. For you shall understand, that if the Horse have but only a cold that is newly taken, the signs are, he will have many Knots like Wax Kernels between his Chaules about the Roots of his Tongue; his Head will be somewhat heavy, and from his Nostrils will run a certain clear Water; but if about his Tongue roots be any great Swelling or Inflammation like a mighty botch or bile, then it is the strangle; but if from his Nostrils do issue any thick, stinking or corrupt Matter, then it is the *Glanders*, of both which we shall speak hereafter in their proper places. Now for this ordinary Cold, which is ordinarily taken, (the signs whereof, besides his much Coughing, are before declared) you shall understand, that for the Cure being very easie, it is helped sundry ways: Some Cure it only by purging his Head with pills of Butter and Garlick, the manner whereof you shall find in the Chapter of Purgations. Other Farriers Cure it with purging his Head with Fumes, and forcing him to Neese, the manner whereof is in the Chapter of Neezing; which done, you shall give him to drink Water wherein hath been sodden *Fennugreek*, Wheat-meal, and Anniseeds; and then to trot him up and down half an hour after. Others use to give him Neezing powder, blown up into his Nostrils; and then this drink: take a pint of Malmsey, and the whites and yolks of four or five Eggs, a head of Garlick bruised small, Pepper and Cynamon, and Nutmeggs, of each a like quantity beaten to fine powder, and a pretty quantity of sweet Butter, mix them together, and give it lukewarm with a Horn three daies together: then keep him fasting at least two hours after. Others use to let the Horse blood in the Vein under

under his Tail, and to rub all his Mouth over with a bunch of Sage bound to a sticks end, and then to mix with his Provender the tender crops of black Berries; but I take this Medicine to be fittest for such Horses, who with the cold Rhume are troubled with pain in their Chaps, and not with stuffing in their Head.

Now albeit none of these Medicines are faultworth, yet some for mine own part, I have ever found to be most Excellent for these slight colds, moderate Exercise, both before and after a Horses water, in such sort as is declared in the Chapter of the Night-mare, without any other Fuming or Drenching, except I found the Cold to be more than ordinary, and that for want of heed-taking it was like to grow to some Ulcer about the Roots of the Tongue. In this Case, I would for one time and no more, give the horse a pint of Sack, and half a pint of Sallet-Oyl made luke-warm, and well brewed with good store of *Sugar candy*, to drink in the Morning fasting, and then exercise him moderately thereupon, without putting him into any sweat, and it hath never failed to work the effects I wished in ample sort, without hindring me at any time of my Travail or Journey, but if you cannot conveniently come by this Medicine, and you must notwithstanding Travail your Horse, then take a Spoonfull of *Tarr*, and folding it in a fine Cloath, fix or tye it fast to the Mouth of your Bit, or Snaffle, and so Travail your horse therewith, and it will take his cold clean away. But yet it will a little abate and lessen his stomach.

C H A P. XL.

 *How certainly to take away any Cold, Poze, or Ratling in the Head; how Violent soever, without giving any inward Medicine.*

IF your Horse have taken any extreme Cold, or Poze in his Head, and being matcht either to Hunt, or to run for any great Wager, the day is so near that you dare not give him any inward Drench, without which, none of our Farriers know how to Cure any Cold; you shall then, or at any other time, (for there is no Medicine in the World more Sovereign) take as much sweet Butter as a big Wall-nut, and with the powder of Brimstone finely beaten and searst, work them either with your Knife, or a Splatter together, till the Butter
be

be brought to a high Cold-Colour; then take two clean Goose-feather, the longest in all the Wing, and first at the quils ends, with a Needle, fasten two long Threds: Then with your Salve annoinc all the Feathers clean over; which done, in the dry powder of Brimston role them over and over; then putting the Feathers ends foremost, open the Horses Nostriis, and thrust them up into his head: then take the threds which are at the quils-ends, and fasten them on the top of the Horses Head: which done, Ride him abroad for an hour or two, ayring him in this manner Morning and Evening, and when you bring him into the Stable, after he hath stood tied up a pretty Season, untie the Threds, and draw out the Feathers, and wiping them very dry, lay them up till you have next Occasion to use them. This Cure of all others is most certain, and taketh away any stopping in the Head how extreme soever.

C H A P. XLI.

The Perfection and best of all Medicines for Poze or Cold.

TAKE (if you can get it) an Ounce of the fine and pure paste of Elicampane, which hath the strings at the Roots taken from it, or for want thereof, an Ounce of the Conserve of Elicampane, and dissolve it in a pint and a half of Sack, and so give it the Horse with a Horn in the Morning fasting, and then Ride him half an hour after it, and let him fast two hours more, then feed him as at Ordinary times: and thus do for two or three Mornings together.

C H A P. XLII.

Of a Horse that is Hide-bound.

THIS Disease which we call Hide-bound, is, when a horses skin cleaveth so hard to his Ribbs and Back, that you cannot with your Hand pull up or loosen the one from the other. It proceedeth sometimes from poverty and ill keeping, sometimes from surfeit of over-Riding; especially if when he is extreme hot, he be suffered to stand long in the Rain or wet-Weather: and lastly, it proceedeth from a corrupt driness of the Blood, which wanting his natural course,

course, forceth his skin to shrink up, and cleave to the Bones. The signs, besides the cleaving of his skin, is, leanness of Body, gauntness of Belly, and the standing up of the Ridge-bone of his Back: it drieth up the Entrails, torments the Body, and makes his Dung stink extraordinarily: and if he be not remedied, Manginess will presently follow after it. The Cure of it is divers, according to the opinion of divers Work-men: the most antient Farriers did use to let him Blood on the Spur-veins, of both sides his Belly, somewhat toward his flank, which done, they gave him this *Drink*: Take of white-Wine, or strong Ale a quart, and add thereunto three Ounces of Sallet Oyl, of *Cumin* one Ounce, of *Aniseeds* two Ounces, of *Licoras* two Ounces, beaten all into fine powder, and give it him luke-warm with a Horn; when he hath Drunk, let one chafe his Back, from the Huckle-bone upward, for the space of an hour or more: then set him in a warm Stable, with good store of Litter; then fold about his Body a thick Blanket, soaked in Water, and wrung, then over it a dry Blanket, then gird them both fast, and stop the fursingle about with great Wisps, for the wet Blanket will put him into a great Heat, and for want of a wet Blanket, if you fold his Body in wet Hay, 'it will do thelike, and loosen his skin; this you shall do the space of a Week, during which time he shall drink no Cold water.

There be other Farriers, which before they lay on the wet Blanket, will annoint all the horses Body over with Wine and Sallet Oyl, and surely it is good also. There be others which for this Disease, use to let the Horse blood in the Neck, then bathe his sides with warm Water, wherein hath been sodden Bay Leaves: then annoint him all over with the Oyl of Rue or Camomile, holding a hot Iron over him to make the Oyl sink into his skin, then give him this *Drink*: Take of Carrets, Rue, Wild Mint, of each an Ounce and a half, of Worm-wood two Ounces; dry them, and beat them to powder, then give two spoonfulls thereof in a pint of Malmsey. There be other Farriers, which take *Fenugreek*, *Turmerick*, *Aniseeds*, *Bayes*, *Licoras*, and *Cumin*, of each a like quantity, dry them, and beat them to powder, and give the Horse two spoonfull thereof with a quart of Ale or Beer luke-warm: Use this at least three Mornings together, and it will not only help the Disease, but if it be formerly used, it will prevent the comming thereof: This *Drink* is also good for

for a Cold. Now although every one of these Medicines are very good, yet for mine own part, I have found this which followeth to exceed them all.

First, let him Blood in the *Neck-vein*, then give him this *Drink*. Take two handfulls of *Selladine*, if it be in the Summer, the Leaves and Stalks will serve, but if it be in Winter, take Leaves, Stalk, Roots, and all, chop them small, then take a handfull of Wormwood, and a handfull of Rue, chop them likewise, put all these into three quarts of strong Ale or Beer, and boyl them till it come to a quart; then take it from the fire, and strain it till you have left no moisture in the Herbs; then dissolve it in three Ounces of the best Treacle, and give it the Horse luke-warm to *Drink*: then for a Week together, once a-day, rub all the Horses Body over with Oyl and Beer, or Butter and beer, against the Hair, and feed him with warm Mashies of Malt and Water, and for his Provender, let him have Barley sodden till it be ready to break, provided that you keep it not untill it sower.

C H A P. XLIII.

Of the Glanders.

Touching this Disease which we call the *Glanders*, My Masters, the old Farriers and I, are at much difference: for some of them do hold Opinion, that it is an inflammation of the Kirnells, which lie on each side of the Throat, underneath the Roots of the Tongue, neer the swallowing place; and their Reason is, that because those Kirnells are called of the *Italians*, *Glandula*, that thence we borrow this Word *Glanders*; adding moreover, that a Horse which is troubled with this Disease, hath great Kirnells underneath his Jaws, easie to be felt, paining him so, that he cannot Eat, or swallow any thing. Others say, it is a swelling upon the Jaw Bones, great and hard, which being inflamed, doth putrifie and rot. But both these Opinions I hold in part Erroneous: for although our old Farriers might (according to the custom of our Nation, which loveth imitation of Strangers) borrow this Word *Glanders* from the *Italian Glandula*; yet these inflammations under the Chaps of the Tongue Roots, is that Disease which we call the *Strangle*, and not the *Glanders*;

ders; and whereas they would call the *Strangle*, the *Quinse*, or *Squintancy*, there is no such matter, neither hath a Horse any such Disease, except they will call the *Vives* by that name, which is far more fitter for the application.

Now for the Glanders, you shall understand, that it is a Running Impostume, ingendred either by Cold, or by Famine, or by long Thirst, or by Eating corrupt and musty Meat, or by being kept in Unfavory Places, or is taken by standing with infected Horses. It is a gathering together of moist and corrupt Humours, which runneth at the Nose; or may be said to be a flux of Rheum, which issueth sometimes at one, sometimes at both the Nostrils: the cause being, the Wideness of the passage, so that the Cold liberally entering into the Brain, bindeth and crusheth it in such manner, that it maketh the Humours there to distill; which descending to the Spiritual parts, and possessing them, in the end suffocates the Horse, either by their abundance, or killeth him by corrupting the principal parts; or else by congealing there by little and little, over-runneeth the natural heat. Now that Distillation, that by cold cometh from the Brain, and breedeth this Glanders, is of three sorts. The first is a Cold, which maketh indigest Humours to pass from the Brain, which cometh by taking off the Saddle suddenly when the Horse is hot, or by letting him Drink before he be inwardly cooled, or before his body be dried: This Distillation commonly is slimy matter that smells not, and is easie to be Cured; for it is no inward Ulcer, but only abundance of Humour, the substance whereof is Gross and White. The second is a great Cold ingendred and congealed, causing Humours something thin and slimy, of the Colour of Marrow, or the White of an Egg: this descendeth to the Throat, and lyeth there till it be discharged through the Nostrils. The third is by long continuance thicker, and therefore harder to be Cured; if the Colour thereof be yellow like a Bean, then is the Glanders most desperate, and lyeth also in his Throat: but if it be a brown or darkish yellow, then commonly a Feaver will accompany the Disease, To these three Distillations, there is commonly added a fourth, which is, when the matter which comes from his Nose, is Dark, Thin, and Reddish, like little sparks of blood; but then it is not said to be the Glanders, but the Mourning of the Chine, which is a Disease, for the most part held incurable. It is therefore most necessary for every good Farrier, when he

shall

shall take this Cure in hand, to consider well the matter which issueth from the Horses Nose: For if the Humour be clear and transparent, so that it may be seen through, then it is not greatly hurtful, or of much moment. If it be White it is worse, yet with much ease Cured. If it be Yellow, separate him from the sound Horses, for he is infectious, yet to be Cured: If that Yellow be mixed with Blood, it is with much difficulty helped, or if the matter be like unto Saffron, the Horse is hardly to be saved. He must also consider whether the matter stink, or have lost the smell; The first is the sign of a Ulcer, the latter of Death: also whether he Cougheth with straightness in his Chest or no; for that also is a sign of an inward Ulcer, and that the Disease is past Cure. Now for the Cure of these three Distillations, which are all that make up a compleat *Glanders*, you shall understand, that when the *Glanders* is of the first sort, it is easily helped by moderate Exercise, and warm Keeping: but if it be of the second sort, you shall give him warm Mashcs of Malt and Water, and perfume his Head well, and purge it by Sneezing; and into his Mashcs you shall put Fennel seed bruised. Others will take a pint of white-Wine, and a handfull of Soot, a quart of Milk, and two Heads of Garlick bruised; brew them together, and give it the Horse to Drink. Others will take a pottle of Urine, a handfull of Bay Salt, and a good quantity of Brown Sugar-candy, boyl it to a quart; then add Licoras and Aniseeds beaten to fine powder, and give it luke-warm to Drink. Others will take Lard, or Swines Grease and boyl it in Water: then take the Fat from the Water, and mingle it with a little Oyl Olive, and a good quantity of Urine, and half as much white-Wine, give a quart of this luke warm to drink. Others use to give of Ale a quart, of grated bread one Ounce and an half, the yolks of two Eggs, of Ginger, Saffron, Cloves, Cinamon, Nutmegs, Cardamomum, Spikenard or Lavender, Galingal, and Honey, of each a pretty quantity, mix these together, and give it to Drink. Now if the Distillation be of the third sort, which is the worst of the three, you shall take half a pound of Swines Blood, and melt it at the fire, add to it a pound of the juice of Beets, with three Ounces of *Eusorbium* finely beaten; and when it hath boyled a little, rake it from the fire, and add another Ounce of *Eusorbium* to it: Keep this Oyntment, and anoint therewith two very long Feathers, or little Rods, lapt with Linnen about, and so anointed, put them

into his Nostrils, and after rubbing them up and down, tye them to the Nose-band of the Bridle, and walk him abroad: Do thus three daies together, and it will either absolutely Cure him, or at least take away the Eye-sore. Others use to take a quart of Ale, an half penny-worth of long Pepper, a little Brimstone, a penny-worth of *Galingal*, two penny-worth of Spignard of *Spain*, two penny-weight of Saffron brayed, with two Ounces of Butter boyled in the Ale: When it is luke-warm, cast the Horse, and holding up his Head, power it equally into his Nostrils; then holding his Nostrils close, till his Eyes stare, and that he sweat; which done, give him Bayes and Ale to Drink: then let him rise, and set him up warm; feeding him with warm Grains and Salt, or with sweet Mash; but the best is, if the Weather be warm, to let him run abroad at Grass. Other Farriers use to dissolve in Vinegar three drams of Mustard-seed, and as much *Euforbium*; then to give him one dram at his Nostril every day before he Drink. Others use to take of *Myrrh*, *Iris*, *Illyrica*, seeds of Smallage, *Aristolochia*, of each three Ounces, *Salmeter*, *Brimstone*, of each five Ounces, Bayes two Ounces, Saffron one Ounce; make this into powder, and when you give it, give part in pills, made with Paste and Wine, and part by the Nostrils with strong Ale: do this for the space of three daies at the least. Others use to take of Malmsey a pint, of strong Ale a pint, of Aquavita four spoonfulls and brew them together, with a pretty quantity of Aniseeds, Licoras, Elicampane Roots, long Pepper, Garlick, and three or four new laid Eggs, and a little Butter; give this luke-warm to Drink; then Walk him abroad, and set him up warm; do this every other day for a Week roge her. Others use to take stale Urine that hath stood three or four daies, and ten Garlick heads, and seething them together, give it the Horse to Drink. Others use to take Swines grease well Clarified, and as much Oyl de Bay as a Walnut, and give it the Horse to Drink, with fair Water luke-warm.

☞ But better than all these it is, to take of Elicampane, Anniseeds, and Licoras, of each one penny-worth, boyl them in three pint of Ale or Beer till one pint be consumed, then add unto it a quarter of a pint of Sallet Oyl, and give it him to Drink luke-warm, then with a quill blow *Euforbium* up into his Nostrils, and within three daies after, take of Mustard four spoonfull, Vinegar a pint, Butter three Ounces, boyl them together, then add thereunto half an Ounce of Pepper,

Pepper, and give it the Horse luke-warm to Drink; use this Medicine a fortnight. Others use to take a handfull of pill'd Garlick, and boyl it in a quart of Milk till a pint be Consumed, then add thereto two Ounces of sweet Butter, and a pint of strong Ale: stir them well together, and give it the Horse fasting to Drink luke-warm; which done, Ride him a little up and down, and use this the space of nine daies.

Thus I have painly shewed you the Opinion and Practise of all the best *Farriers* both of this Kingdom and of others, and they be all very good and effectual; yet for mine own part, that which I have found ever the best in my practice, is, if the Disease be of the first or second sort, to give the Horse to Drink fasting every Morning for a fort night together, a pint of strong Ale, and five spoonfull of the Oyl of Oats, the making of which Oyl, you shall read in a particular Chapter following; but if the Disease be of the third sort, which is most desperate, you shall then take of Tanners Ouse a pint, and of new Milk a pint, and of Oyl Olive half a pint, and the quantity of a Head of Garlick bruised, and a little Turmerick, mix these well together, and give it the Horse to Drink: Do this thrice in one fortnight, and it will help, if any help be to be had.

C H A P. XLIV.

Two most certain and lately found out Medicines, which will without all fail Cure any Glanders, though our Farriers hold it impossible.

IF your Horses Cold be come to the worst Glanders, which is a continual Running at the Nose, and hath run by the space of divers Moneths, so that your *Farriers* can do you no good; shall then take better then two handfull of the white Cankerous moss which grows upon an old Oken pale, and boyl it in two quarts of Milk, till one quart be almost consumed; then strain it, and squeeze the moss well, which done, give it the Horse luke-warm to Drink: then take the Goose feathers, Brimstone, and Butter, in such manner as is set down in the new Additions for the Cold, or Poze in a Horses Head, (pag. 55.) and having put them up into his Nostrils, Ride him forth an hour or two gently, and after he is come home, draw forth the Feathers, and keep his Body warm. This Disease you shall understand, cometh

cometh not suddenly, but grows out of long process of time; so likewise the Cure must not be expected to be done in a moment, but with much leisure; therefore you must continue your Medicine as your leisure will serve, either every day, or at least thrice a week, if it be for four or five Months together, and be assured in the end it will yield your desire.

Now the second certain and well approved Medicine is, to take Elicampane Roots, and boyl them in Milk till they be soft, that you may bruise them to Pap: Then with a Horn give them to the Horse, together with the Milk luke-warm, being no more then will make the Roots Liquid: then having annointed your Goose-feathers, put them up into his Nostrils, and Ride him forth, as is before shewed.

C H A P. XLV.

Of the Mourning of the Chine.

THIS Disease which we call the *Mourning of the Chine*, or as some Farriers term it, the *moist Malady*, is that fourth sort of corrupt Distillation from the Brain, of which we have spoken in the Chapter before, shewing from whence it proceeds, and the signs thereof: *to wit*, that the Corrupt matter which issueth from his Nostrils will be Dark, Thin, and Reddish, with little streaks of Blood in it. It is supposed by some Farriers, that this Disease is a foul Consumption of the Liver, and I do not derogate from that Opinion: For I have found the Liver wasted in those Horses which I have opened upon this Disease: And this Consumption proceeds from a Cold, which after grows to a Peze, then to a Glanders, and lastly to this Mourning of the Chine.

The Cure whereof, according to the Opinion of the oldest *Farrers*, is, to take clear Water, and that Honey which is called *Hydromel*, a quart, and put thereunto three Ounces of Sallet Oyl, and pour it into his Nostrils each Morning, the space of three daies; and if that help not, then give him to drink every day, or once in two daies at the least, a quart of old Wine, mingled with some of the soveraign Medicine called *Tetrapharmacum*, which is to be had almost of every *Apothecary*. Others use to take Garlick, Houflick, and Chervill, and

and stamping them together, thrust it up into the Horses Nostrils.

Others use to let the Horse fast all Night, then take a pint and a half of Milk, three heads of Garlick pild and stamped, boyl them to the half, and give it to Horse, some at the Mouth and some at the Nose: then gallop him a quarter of a Mile, then rest him; then gallop him half a Mile, then rest him again: thus do twice or thrice together, then set him up warm, and give him no Water till it be Highnoon; then give him a sweet Mash: Use this Cure at least three daies together. Others use to take half a peck of Oats, and boyl them in running-water till half be consumed, then put them into a Bagg, and lay them very hot upon the Navel place of his Back, and there let it lie thirty hours, using thus to do three or four times at the least. Others use to take *Worm-wood*, *Peucedanum*, and *Centory*, of each a like quantity: boyl them in Wine, then strain them, and pour thereof many times into his Nostrils, especially into that which most runneth. Others use to take Hare-hound, Licoras, and Aniseeds, beaten to powder; then with sweet Butter to make pills thereof, and to give them fasting to the Horse. Others use to take Wheat-flower, Aniseeds, and Licoras stamped in a Morter, five or six Cloves of Garlick bruised; mix all these together, and make a paste of them; then make it into pills as big as Wall-nuts, and taking out the Horses Tongue, cast the Balls down the Horses throat three or four at a time, then give him two new laid Eggs she's and all after them.

Now after all these, the best and most approved Medicine, is, to take as much of the middle green bark of an Elder Tree growing on the Water side, as will fill a reasonable Vessel, putting thereunto as much running water as the Vessel will hold, and let it boyl till half be consumed, and then fill up the Vessel again with Water, continuing so to do three times one after another; and at the last time, when the one half is consumed, take it from the fire, and strain it exceedingly through a linnen Cloath; then to that Decoction, add at least a full third part of the Oyl of Oats, or for want of that, of Oyl Olive, or of Hoggs grease, or sweet Butter; and being warmed again, take a quart thereof, and give it the Horse to drink, one Hornfull at his Mouth, and another at his Nostrils, especially that which casteth out the matter. And in any case, let the Horse be Fasting when he taketh this Medicine; for it not only Cureth this, but any sickness

sickness proceeding from Cold whatsoever. It shall be also good to use to his Body some wholesome Friction, and to his Head some wholesome Bath, of which Baths you shall read more hereafter in a Chapter following. For his Diet, his meat would be sodden Barley, and sweet Hay, and his Drink warm Water, or Mashcs: but if it be in the Summer-season, then it is best to let him run at Grass only.

C H A P. XLVI.

A most Rare and Certain approved Medicine, to Cure any High running Glanders, called the Mourning of the Chine, held of all Men incurable.

 **T**His Disease, to my Knowledge, there is not any Smith or Farrier in this Kingdom, can tell how to Cure; for it comes not to the Extremity, till the Horse have run at his Nose a year or more; and have at the Roots of his Tongue, a hard Lump gathered, which will not be dissolved. Now for mine own part, it is well known I have Cured many with this Medicine only. Take of *Auripigmentum* and *Tussilaginis* beaten into fine Powder, of each of them four Drams: then beating them with fine Turpentine, bring them into a paste, then make of it little Cakes or Troches, as broad as a groat, and dry them: This done, lay about two or three of them on a Chasing-dish of Coals, and cover them with a Tunnel, so that the smoak may come out only at the end thereof, and so without any loss ascend up into the Horses Head through his Nostrils, then Ride the Horse till he begin to sweat; do this once every Morning before water, till the Running be stopt, which will be in a very short space, considering the greatness of the Disease.

C H A P. XLVII.

Of the Cough.

Coughing is a Motion of the Lungs, raised naturally from his Expulsive power, to cast out the hurtfull cause, as Neezing is the Motion of the Brain. Now of Coughs, there be some outward, and

and some inward: those are said to be outward, which proceed of outward causes, as when a Horse doth Eat or Drink too greedily, so that his Meat goeth the wrong way, or when he licketh up a Feather, or eateth dusty or sharp-bearded straw, and such like, which tickling his Throat, causeth him to Cough; those which are said to be inward, are either wet or dry, of which we shall speak more hereafter. Now of these outward Coughs, they may proceed from the Corruption of the Air, which if it do, you shall give him half an Ounce of *Diapente* in a pint of Sack, and it will help. It may also proceed from dust, and then you must wash it down by powring into his Nostrils Ale and Oyl mingled together. It may come by eating sharp and sowe things; and then you must put down his Throat pills of sweet Butter, whose softness will help him. It may proceed from some little or slight taken Cold, and then you shall take the whites and yolks of two Eggs, three Ounces of Saller-Oyl, two handfull of Bean flower, one Ounce of *Fenugreek*, mix them with a pint of old Malmsey, and give it the Horse to drink three daies together: or else take Tarr and fresh Butter, mix them together, and give pills thereof to the Horse four times in seven daies: that is, the first, the third, the fifth, and the seventh day. There be others which use to take a Gallon of fair water, and make it ready to seeth; then put thereto a peck of ground Malt, with two handfull of Box leaves chopt small, and a little Groundsell, mix them all together, and give him every Morning and Evening a pint for a Week together. If to the Box leaves you add Oats and Bettony, it is not amiss, so you keep the Horse warm. Others use to boyl in a Gallon of water one pound of *Fenugreek*, then straining it, give the water Morning and Evening by a pint at a time to drink, then drying his *Fenugreek* give it the Horse with his Provender. Others use for all manner of Coughs to take a quartern of white Currants, and as much Clarified Honey, two Ounces of sweet Marjoram, with old fresh Grease, and a Head of Garlick; melt that which is to be molten, and pun that which is to be beaten; mix them together, and give the Horse a pint thereof, better than three Mornings together. Others use to give the Horse the gut of a young Pullet dipt in Honey, and being warm; and certainly, there is not any of these Medicines but are most soveraign and well approved. Now whereas some

Farriers use to thrust down the Throat of the Horse a Willow-wand, rolled about with a Linnen cloath, and annointed all over with Hony, (I for my part) do not like it; for it both torments the Horse, more then there is occasion, and doth but only go about to take away that which is gone in the struggling, before the Medicine can be used: for it is only for a Cough, which cometh by a Feather, or some such like matter.

C H A P. XLVIII.

Of the inward, or Wet Cough.

Touching inward Coughs, which are gotten and ingendred by Colds and Rhumes of long continuance, being not only dangerous, but sometimes mortal, you shall understand, that they are divided into two kinds, the one Wet, the other Dry; the Wet Cold proceedeth from Cold causes taken after great heat; which heat dissolving Humours, those Humours being again congealed, do presently cause Obstructions and Stopping of the lungs. Now the signs to know this wet Cough, is, the Horse will ever after his Coughing, cast out either water or matter out of his Nostrils, or champ or chew with his Teeth the thick matter which he casteth out of his Throat, as you shall easily perceive, if you heedfully note him; he will also Cough often without intermission, and when he Cougheth, he will not much bow down his Head, nor abstain from his Meat: and when he Drinketh, you shall see some of his Water to issue out of his Nostrils. The Cure is, first to keep him exceeding warm; then forasmuch as it proceedeth of Cold causes, you shall give him hot Drinks, and Spices, as Sack, or strong Ale brewed with Cinamon, Ginger, Cloves, Treacle, long Pepper, and either Swines Grease, Saller. Oyl, or sweet Butter; for you shall know, that all Cold causes are Cured with Medicines that open and warm; and the hot with such as cleanse and Cool. Some use to take a pretty quantity of *Benjamin*, and the yol of an Egg, which being well mixt together, and put into an Egg-shell cast all down into the Horses throat, and then moderately Ride him up and down for more than a quarter of an hour: and do this three or four Mornings together. Others use to keep him Warm, and then to give him this Drink. Take of Barley one peck, and

and boyl it in two or three Gallons of running Water, till the Barley be soft, together with bruised Licoras, Anniseeds, and Raisons, of each a pound; then strain it, and to that Liquor put of Honey a pint, and a quarter of Sugar-candy, and keep it close in a pot to serve the Horse therewith four several Mornings, and cast not away the Barley, nor the rest of the strainings, but make it hot every day to perfume the Horse withall in a close Bag; and if he eat of it, it is so much the better: and after this, you shall give the Horse some moderate Exercise; and for his Dyet, let him drink no cold water till his Cough abate, and as it lesseneth, so let the Water be the less warmed.

Now for mine own part, though all these Receipts be exceeding good, and very well approved, yet in this Case, thus hath been, and ever shall be my Practice; if I found either by the Heaviness of the Horses Head, or by the Ratling of his Nostrils, that the Cough proceeded most from the stopping of his Head, I would only give him four or five Mornings together, three or four good round pills of Butter and Garlick, (well knodden together) fasting, then Ride him moderately an hour after; but if I found that the sickness remained in the Chest or Breast of the Horse, then I would give him twice in four daies a pint of Sack, half a pint of Saller-Oyl, and two Ounces of Sugar-candy well brewed together, and made luke-warm, and then Ride him half an hour after, and set him up warm, suffering him to drink no cold water till his Cough begin to abate and leave him.

But for all Wet Coughs, frettized and broken Lungs, putrified and rotten Lungs, or any such moist Disease, see the new Additions for the Mourning of the Chine, and it is a certain Cure.

C H A P. XLIX.

Of the Dry Cough.

THis Disease which we call the Dry Cough, is a gross and tough Humour, cleaving hard to the hollow places of the Lungs, which stoppeth the Wind-pipes, so that the Horse can hardly draw his Breath. It doth proceed by ill Government, from the Rhume, with distilleth from the Head, falleth down to the Breast, and there

inforceth the Horse to strive to cast it out.

The especial signs to know it, is, by eating Hot Meats, as Bread that is spiced, Straw dry, Hay, or such like, his extremity of Coughing will increase; by eating Cold and moist meats, as Grasse, Sorage, Grains, and such like, it will abate and be the less: he cougheth seldom, yet when he Cougheth, he Cougheth Violently, long time together, and Drily, with a hollow sound from his Chest: he also boweth his Head down to the ground, and forsaketh his meat whilst he Cougheth, yet never casteth forth any thing either at his Mouth or Nostrils.

This Cough is most dangerous, and not being taken in time, is incurable: for it will grow to the Purfick or Broken-winded altogether. The Cure, according to the opinion of the antient Farriers, is, that forasmuch as it proceedeth from Hot Humours, therefore you shall perfume his Head with Cold simples, as *Camomile*, *Mellilot*, *Licoras*, dried Red *Roses* and *Camphire* boyled in water, and the fume made to pass up into his Mouth and Nostrils.

Others use to take a Close Earthen pot, and to put therein three pints of the strongest Vinegar, and four Eggs, shells and all unbroken, and four Heads of *Garlick* clean pilled and bruised, and set the pot being very close covered in a warm Dunghill, or a Horses Mixin, and there let it stand 24. hours, then take it forth and open it, and take out the Eggs which will be as soft as silk, and lay them by untill you have strained the Vinegar and *Garlick* through a linnen Cloath: then put to that Liquor a quartern of Honey, and half a quartern of Sugar-candy, and two Ounces of *Licoras*, and two Ounces of *Aniseed* beaten all into fine powder, and then the Horse having fasted all the night, early in the Morning about seven or eight a clock, open the Horses mouth with a Drench staff and a Cord, and first cast down his Throat one of the Eggs, and then presently pour after it a Horn full of the afore said Drink, being made luke-warm: then cast in another Egg, and another Horn-full: and thus do till he hath swallowed up all the Eggs, or three at the least; then Bridle him and Cover him warmer than he was before, and set him up in the Stable, tying him to the bare Rack for the space of two hours: then unbridle him, and give him either some Oats, Hay, or Grasse; yet in any case give him no Hay; untill it hath been somewhat sprinkled with water; for there is no greater enemy to a dry Cough than

than dry Hay, dry Straw, or Chaff; then let him have cold water the space of nine dayes. Now if you chance the first Morning to leave an Egg untaken, you shall not fail to give it him, and the remainder of the Drink the Morning following. If you find by this practice that the Cough weareth not away, you shall then purge his Head with Pils, of which you shall read in the Chapter of Purgations: after his Pils received, you shall let him fast three hours, standing warm cloathed and littered in the Stable; you shall also now and then give him a warm Mash, and once a day trot him moderately abroad.

There be other *Farrers* which for this dry Cough take only the Herb called *Lyons foot*, *Ladies mantle*, *Spurge*, and *Smalage*, of each a like quantity, seeth them in a quart of old Wine, or a quart of running Water till some part be consumed, and give it the Horse to drink; if instead of the herbs themselves, you give the juyce of the herbs in Wine, it is good. There be others which take a good quantity of white Currants, and as much Honey, two Ounces of *Marjoram*, one Ounce of *Penirial*, with five pounds of fresh Grease, and nine Heads of *Garlick*; beat that which is to be beaten, and melt the rest; give this in four or five days like pils dipt in Honey. Others use to take *Myrrh*, *Opoponax*, *Iris*, *Ilerica*, and *Galbanum*, of each two Ounces, of red *Storax* three Ounces, of *Turpentine* four Ounces, of *Henbane* half an Ounce, of *Opium* half an Ounce, bear them to fine powder, and give two or three spoonfull with a pint of old Wine, or a quart of Ale.

Others use to take forty grains of Pepper, four or five Roots of *Radish*, four Heads of *Garlick*, and five Ounces of sweet Butter; stamp them all well together, and give every day a Ball of it to the Horse for a Week together, making him fast two hours after his taking of it: and surely it is a most Excellent approved Medicine for any old over grown Cold, or Cough. Other *Farrers* use to take of Oyl de Bay, and sweet Butter, of each half a pound, *Garlick* one pound, beat it together unpilled, and being well bearen with a pestle of Wood, add your Oyl and Butter unto it: then having made it into Balls, with a little Wheat-flower, give your Horse every Morning for a Week and more, three or four Balls as bigg as Walnuts, keeping him fasting after from meat three hours, and from drink till it be night, provided that still his Drink be warm, and his Meate, if it possible

possible may be, Grasse, or Hay sprinkled with water: as for his Provender, it would be Oats and Fenugreek sprinkled among it. Now if you perceive that at a fort-nights end, his Cough doth nothing at all abate, you shall then for another Week give him again the same Physick and Dyet; but truly for mine own part, I have never found it to fail in any Horse whatsoever; yet I will wish all Farriers not to be too busie with these inward Medicines, except they be well assured that the Cold hath been long, and that the Cough is dangerous.

C H A P. L.

Two Excellent true and well approved Medicines for any Cold, dry Cough, shortness of Breath, purfiness or Broken-winded.

THe first is, take of Tarre three Spoonfull, of sweet Butter as much, beat and work them well together with the fine powder of Licoras, Anniseeds, and Sugar-candy, till it be brought to a hard paste: then make it in three round Balls, and put into each Ball four or five Cloves of Garlick, and so give them to the Horse, and warm him with Riding both before and after he hath received the pills, and be assured that he be fasting when he takes it, and fast at least two hours after he hath taken it.

The second is, take of the white fat or lard of Bacon, a piece four fingers long, and almost two fingers thick both waies; then with your Knife making many holes into it, stop it with as many Cloves of garlick as you can conveniently get into it, then rowling it in the powder of Licoras, Anniseeds, Sugar-candy and Brimstone, all equally mixt together, give it your Horse fasting in a Morning at least twice a Week continually, and Ride him after it, and be sure that all the Hay he eats be finely sprinkled with water.

C H A P. LI.

The best of all other Medicines for a Dry Cough, never before mentioned, nor revealed.

TAke of the Sirrup of Colts-foot two Ounces, of the powder of Elicampane, of Anniseeds, and of Licoras, of each half an Ounce, of Sugar-candy divided into two parts, two Ounces, then with sweet Butter work the Sirrup and the powders, and one part of the Sugar-candy into a stiff paste, and thereof make Pills or small Balls, and role them in the other part of the Sugar-candy, and so give it to the Horse fasting, and exercise him gently an hour after it: and thus do for divers Mornings till you find amendment.

C H A P. LII.

Of the Frettized, Broken, and Rotten Lungs.

COughs do many times proceed from the Corruption and Putrifaction of the Lungs, gotten either by some extreme Cold, Running or Leaping, or by over-greedy Drinking after great thirst; because the Lungs being inclosed in a very thin film, they are therefore the much sooner broken; and if such a Breach be made, without instant Cure, they begin to Inflame and Apostume, Oppressing and Sickning the whole Lungs. Now the signs to know this Disease, is, the Horses flanks will beat when he Cougheth, and the slower they beat, the more old and dangerous is the Disease: he will also draw his wind short, and by little at once: he will groan much, be fearfull and loath to Cough; and often turn his Head to the place grieved: To conclude, he will never Cough but he will bring up something which he will champ in his Mouth after. The Cure is, give him two or three Ounces of Hoggs-grease, and two or three Spoonfull of *Diapente* brewed in a quart of Barly water, wherein Currants have been sodden. Other Farriers use to take a pound of Licoras, and being scraped and sliced, to steep it in a quart of water four and twenty hours; then to strain it, then to boyl three or four Ounces of Currants in it, and so give it the Horse

Horse to drink, and keep him fasting three or four hours after. There be other Farriers which use to take of *Fennugreek* and linseed, of each half a pound, of Gum-Dracant, of Mastick, of Myrrh, of Sugar, of Fitch-flower, of each one Ounce; let all these be beaten into fine powder, & then infused one whole night in a good quantity of warm water, and the next day give him a quart of this luke-warm, putting thereto two Ounces of the Oyl of Roses, and this you must do many dayes together: and if the Disease be new, it will certainly heal; if it be never so old it will assuredly ease him, but in any case let him drink no cold water: And for his food, Grass is the most Excellent.

Others use (and it is the best Cure) to take of Malmsey a pint, of Honey three Spoonfull, mix them together, then take of *Myrrh*, of *Saffron*, of *Cassia* and *Cinamon*, of each a like quantity, beat them to a fine powder, and give two Spoonful thereof in the Wine to drink, do this at least a fortnight together, and it is certain it will help these fretted and broken Lungs, but for the putrified and rotten Lungs, we will speak more in this next Chapter.

C H A P. LIII.

Of the Putrified and Rotten Lungs.

THis Disease of Rotten and Exulcerate Lungs, you shall know by these signs: he will Cough oft and vehemently, and ever in his Coughing he will cast little Reddish lumps out of his mouth, he will decay much in his flesh, and yet eat his meat with more greediness than when he was sound: and when he Cougheth, he will cough with more ease and clearness, than if his Lungs were but only broken. The Cure whereof, according to the practice of our ordinary English Farriers, is, to give the Horse divers Mornings together a pint of strong Vinegar warm, or else as much of mans Urine, with half so much Hoggs-grease brewed warm together.

But the more ancient Farriers take a good quantity of the juyce of Purslain mixt with the Oyl of Roses, adding thereunto a little *Tragacanthum*, which hath before been laid to sleep in Goats milk, or for want thereof in Barley, or Oaten milk strained from the Corn, and give him a pint thereof every Morning for seven days together. This Medicine is but only to Ripen and Break the impostume, which
you

you shall know if it hath done, because when the sore is broaken, his Breath will stink exceedingly: Then shall you give him the other seven dayes this Drink. Take of the Root called *Costus*, two Ounces, and of *Cassia*, or *Cinamon*, three Ounces beaten into fine powder, and a few Raisins, and give it him to drink, with a pint of Malmsey. Others use to take of *Frankincense* and *Aristologia*, of each two Ounces beaten into fine powder, and give the Horse two or three spoonfuls thereof with a pint of Malmsey. Others take of unburnt Brimstone two Ounces, of *Aristolochia* one Ounce and a half beaten to powder, and give it the Horse with a pint of Malmsey.

C H A P. LIV.

Of shortness of Breath, or Purfines.

THis Disease of short Breath or Purfines, may come two several ways, that is, Naturally, or Accidentally: Naturally, as by the straightness of his Conduits, which convey his Breath, when they want liberty to carry his Breath freely, or being cloyed up with fat, force Stoppings and Obstructions in his Wind-pipe, and thereby make his Lungs labour and work painfully. Accidentally, as by hasty running after Drinking, or upon full Stomach, by which Humours are compelled to descend down into the Throat and Lungs, and there stoppeth the passage of the Breath. The signs of this Disease are continual panting and heaving of his Body without any Coughing, great heat of Breath at his Nostrils, and a squeezing or drawing in of his Nose when he Breatheth; besides a coveting to hold out his Head whilst he fetcheth his Wind. The Cure, according to the opinion of some of our best Farriers, is, to give him in his Provender, the Kirnells of Grapes, for they both fat and purge; and you must give them plentifully. The warm Blood of a sucking Pigg is excellent good also. Other Farriers use to take Venus-hair, Ireos, Ash-keys, Licoras, Fenugreek, and Raisins, of each a dram and a half; Pepper, Almonds, Borage, Nettle-seed, *Aristolochia*, and *Colloquintida*, of each two drams; *Algaritium* one dram and a half, Honey two pound, dissolve them with water, wherein Licoras hath been sodden, and give him one pint every Morning for three or four Mornings. Others use to take Molline, or Long worr, and make a powder there-

of, and give two Spoonfuls thereof with a pint of running water, or else powder of Gentain, in the fore-said manner, and do it for divers Mornings.

Others use to take of Nutmegs, Cloves, Galingal, grains of Paradise, of each three drams, Caraway seed, and Fenugreek, a little greater quantity, as much Saffron, and half an Ounce of Licoras; beat them all into fine powder, then put two or three Spoonfuls thereof to a pint of White-wine, and the yolks of four Eggs, and give it the Horse to Drink; then tye his Head up high to the Rack for an hour after: that done, either Ride him, or Walk him up and down gently, and keep him fasting four or five hours after at the least: the nextday turn him to Grass, and he will do well. There be others which use to let the Horse blood in the Neck vein, and then give him this Drink: Take of Wine and Oyl, of each a pint, of *Frankincense* half an Ounce, and of the juyce of *Hare hound* half a pint; mix them well together and give them to Drink.

Others use to give him only somewhat more than a pint of Honey, Hoggs-Grease and Butter molten together, and let him Drink it luke-warm. Eggs made soft in Vinegar, as is shewed in the Chapter of the dry Cough, is Excellent for this shortness of Breath, so you give the Eggs increasing, that is, the first day one, the second day three, and the third five: and withall, to pour a little Oyl and Wine into his Nostrils is very good also. There be other Farriers which use to take a Snake, and cut off her Head and Tail, and then take out the Guts and Entrails, boyl the rest in Water till the Bone part from the Flesh: Then cast the Bone away, and give every third day of this Decoction more than a pint, till you have spent three Snakes: and this is Excellent good for the dry Cough also.

Now the last and best Medicine for this shortness of Breath, (for indeed in this Case I do not affect much Physicking) is only to take Anniseed, Licoras, and Sugar-candy, all beaten into very fine powder, and take four Spoonfuls thereof, and brew it well with a pint of white-wine, and half a pint of Sallet-Oyl: and use this ever after your Horses travail, and a day before he is travailed.

C H A P. LV.

Of the Broken winded, or Pur-sick Horse.

THIS Disease of Broken-winded, I have ever since I first began to know either Horse or Horse-leach craft, very much dispired with my self: and for many years did constantly hold (as I still do) that in truth there is no such Disease; only in this I found by daily Experience, that by over-hasty or sudden running of a fat Horse (or other) presently after his Water, or by long standing in the Stable with no Exercise and foul Food, that thereby gross and thick Humours may be drawn down into the Horses Body so abundantly, that cleaving hard unto the hollow places of his Lungs, and stopping up the Wind pipes, the Wind may be so kept in, that it may only have his resort backward, and not upward, filling the Guts, and taking from the Body great part of his strength and lively-hood: which if from the Corruption of our old Inventions, we call Broken-winded, then I must needs confess, that I have seen many Broken-winded Horses. The signs of which Disease are these, much and Violent beating of his Flanks, especially drawing up of his Belly upward, great opening and raising of his Nostrils, and a continual swift going to and fro of his Tuel: besides, it is ever accompanied with a Dry and Hollow Cough. The Cure, I must needs say in so great an Extremity, (for it is the worst of all the evils of the Lungs, which are before spoken of) is most desperate, but the preservations and helps both to continue the Horses Health and his daily Service, are very many, as namely, (according to the opinion of the ancient Farriers) to purge your Horse by giving him this Drink. Take of *Maiden-hair, Ireos, Ash, Licoras, Fenugreek, Basnis*, of each half an Ounce, of *Cardanum, Pepper, bitter Almonds, Borage*, of each two Ounces, of *Nettle-seed*, and of *Aristolochia*, of each two Ounces, boyl them altogether in a sufficient quantity of water, and in that Decoction dissolve half an Ounce of *Agarick*, and two Ounces of *Colloquintida*, together with two pound of Honey, and give him a pint and a half of this at a time, for at least a Week together; and if this Medicine chance at any time to prove too thick, you shall make it thin with Water, wherein *Licoras* hath been sodden; and some Farriers also

besides this Medicine, will with a hot Iron draw the Flanks of the Horse to restrain their beating, and slit the Horses Nostrils to give the wint more liberty, but I do not affect either the one or the other: The best Diet for a Horse in this case, is Grass in Summer, and Hay sprinkled with water in Winter. There be other Farriers, which for this Infirmitie hold, that to give the Horse three or four daies together sodden Wheat, and now and then a quart of new sweet Wine, or other good Wine, mixt with Licoras water, is a certain remedy. There be other Farriers, which for this Disease take the Guts of a Hedge-hog, and hang them in a warm Oven till they be dry, so that a man may make powder of them: Then give your Horse two or three spoonfull thereof with a pint of Wine or strong Ale: then the rest mixt with Anniseeds, Licoras, and sweet Butter, and make round Balls or Pils thereof, and give the Horse two or three after his Drink: and so let him fast at least two hours after. Now when at any time you give him any Provender, be sure to wash it in Ale or Beer; then take *Cumin*, *Anniseeds*, *Licoras*, and *Sentuary*, of each a just quantity, make them being mixt together into fine powder, and strew two spoonfulls thereof upon the provender being wet. This Physick must be used for a fortnight at the least. Others use to take of Cloves and Nutmegs three drams, of Galingale and *Cardamomum* three drams, of Soot, of Bay-seeds, and *Cumin*, of each three drams, and make them into fine powder, and put it into white Wine being well tempered with a little Saffron: then put to so many yolks of Eggs as may countervail the other quantity: then mix them with water wherein Licoras hath been sodden, making it so thin that the Horse may drink it, and after he hath drunk the quantity of a pint and a half of this drink, tye up his Head to the Rack, and let him so stand at least an hour after, that the drink may descend into his Guts, then walk him gently abroad, that the Medicine may work; and in any Case give him no water for the space of four and twenty hours after: The next Morning give him some Grass to eat, and the branches of Willow or Sallow, which will cool the Heat of the Paction.

 Now there be other Farriers which take of *Pances*, *Long-wort*, *Maiden-hair*, the crops of *Nettles*, *Carduus Benedictus*, herb *Fluctin*, the roots of *Dragons* bruised, the roots of *Elcampane* bruised, of *Water-hemp*, of *Penirial*, of *Light-wort*, of *Angelica*, of each of these

these a good handfull, or so many of these as you can conveniently get: bruise them, and lay them all Night in two or three Gallons of water, and give it a boyl in the Morning, and let the Horse drink thereof as much luke-warm as he will, then after this Drink, give him a pretty quantity of sodden Wheat; use this Diet for a Week or more at the least: and then if the Season be fit, put him to Grass. This Cure is of great Reputation, and thought to help when all other fail: for mine own part, I wish every man to judge it by the practice.

There be others, which only for nine or ten dayes together, will give their Horse water, wherein Licoras hath been sodden, mixt with Wine, and hold it a most soveraign help.

There be others, which will only give new Milk from the Cow: but I despair of that Cure, because Milk being only Flegmarick; Flegm is the only substance of this Disease. Other *Farriers* use to keep the Horse fasting four and twenty hours, then take a quart of Ale, a quarter of an Ounce of Fenugreek, half a quarter of Bayes, of the green Bark of Elder Trees, of Sugar candy, of water Cresses, of red Mints, of red Fennel, or Haw Tree leaves, and of Primrose leaves, of each half an Ounce, the Whites of six Eggs; beat these in a mortar, and seeth them in the Ale, give it him to drink, then let him fast after it two hours: then give him Meat and Provender enough, yet but a little drink. Others use to give him wet Hay, and moderate Travail: then take twenty Eggs, steep them in Vinegar four and twenty hours, giving the Horse two every Morning, and after the Eggs are spent, a pottle of new Milk from the Cow.

Now there be other *Farriers*, which only will dissolve in Vinegar fifteen Eggs, and give the Horse the first day three, the second day five, and the third day seven, and hold it a good help. Others will take an Ounce of Frankincense, two Ounces of Brimstone, and mix it with a pint of Wine, and half a pint of Honey. Others will take *Sal-niter*, burnt with the powder of pitch, and give it with the same quantity of Wine and Honey. Others will only give *Sal-niter* mingled with his meat, provided always, that in every Cure you keep your Horse from Cold and Labour, and daily chafe his Head with Oyl and Wine. But of this, look in the last new Additions for the dry Cough, noted thus .

C H A P. LVI.

Of the dry Malady or Consumption.

THis Disease of the dry Malady, or as the Antient Farriers term it, a general Consumption, is nothing but a meer Exulceration of the lungs, proceeding from a Cankerous fretting and gnawing Humour ingendred by Cold and Surfeit, which descending from the Head, sickness and corrodeth the Lungs. Some of our ignorant Farriers will call it the Mourning of the Chine, but they are thus far forth deceived, that the Mourning of the Chine doth ever cast some filthy matter from the Nose, and the dry Malady never casteth forth any thing.

The signs to know this dry Malady or Consumption, are these: His flesh, and strong estate of Body will consume and waste away, the Belly will be gaunt, his back-bone hid, and his Skin so stretched or shrunk up, that if you strike on him with your hand, it will sound hollow like a Tabor: his Hair will hardly shed, and either he will utterly deny his Meat, or the meat he eateth will not Digest, prosper, or breed any flesh on his Body; he will offer to Cough, but cannot, except in a faint manner, as though he had eaten small Bones; and truly, according to the Opinion of others, so I find by mine own practice of fifty years, that it is incurable, yet that a Horse may be long preserved to do much service, I have found it by these helps: First to purge his Head with such Fumes and Pills as are good for the Glanders, which you may find in the Chapter of Purgations, then give him Cole-worts small chopt with his Provender, and now and then the Blood of a sucking Pig warm.

There be other well Experienced Men, that instead of the Blood, will give either the juyce of *Leeks* mixt with Oyl and Wine, or else Wine and *Frankincense*, or Sallet Oyl and the juyce of Rue mixt together: But in my conceit, the best Cure, is, to purge his Body clean with comfortable and gentle purges, and then to be suffered to run at Grass, both for a Winter and a Summer, and there is no question, but he must necessarily end or mead, for languish long he cannot.

C H A P. LVII.

Of the Consumption of the flesh.

THIS Disease which we call the Consumption of the flesh, is an unnatural or general dislike, or falling away of the whole Body, (or, as we term it) the wasting of the flesh, which proceedeth from divers grounds: as namely, from inward Surfeits, either by naughty Food, or ill Diet, or from unclean, moist, and stinking Lodging, but especially from disorderly Labour, as by taking great and suddain Colds after Violent heat, or such like; all which procure the wasting or falling away of the flesh. The signs whereof are these: first, an unnatural and causeless Leanness, a dry and hard Skin cleaving fast to his sides, want of Stomach or Appetite to his Meats, a falling away of his Fillets, and a general Consumption both of his Buttocks and Shoulders: the Cure whereof, according to the Antients, is, to take a Sheeps Head unflaid, and boyl it in a Gallon and a half of Ale, or running Water untill the Flesh be consumed from the Bones; then strain it through a Cloath, and put thereto of Sugar half a pound, of Cinamon one Ounce, of conserve of Roses, of Barberies, and of Cherries, of each one Ounce; mingle them together, and give the Horse every Morning a quart thereof luke-warm, till two Sheeps Heads be spent; and after every time he Drinketh, let him be gently Walked or Ridden up and down according to his strength, that is, if the Weather be Warm, abroad, if it be Cold and Windy, then in the Stable, or some close House, suffering him neither to Eat nor Drink for two hours after his Medicine; and from Cold water you shall keep him the space of fifteen dayes. Now for his ordinary Food or Provender, you shall repute that best which he eateth best, whatsoever it be; and that you shall give him by little and little, and not any gross or great quantity at once, because the abundance and glut of Food taketh away both the Appetite and Nutriment which should proceed from wholesome Feeding.

C H A P. LVIII.

How to make a lean Horse fat.

BESIDES this General Consumption of a Horses flesh, which for the most part, or altogether, proceedeth from sickness; there is also another Consumption, or want of flesh, which proceedeth from Neshness, Tenderness, Freeness of Spirit, and the Climate under which the Horse is bred: as namely, when a Horse that is bred in a warm Climate, comes to live in a Cold; or when a Horse that is bred upon a fruitfull and rich Soil, comes to live in a Barren and dry place. In any of these Cases, the Horse will be lean without any apparent sign of Grief or Disease, which to recover, there be many Receipts and Medicines, as namely: The ancient *Farriers* did use when a Horse either grew lean without Sickness or Wound, or any known Distemperature, to take a quarter of a peck of Beans, and boyl them in two Gallons of water till they swell or burst, then to mix with them a peck of Wheat Bran, and so to give it the Horse in manner of a Mash, or instead of Provender: for it will fat suddainly. Others, and especially the *Italians*, will take Cole-worts, and having sodden them, mix them with Wheat Bran, and Salt, and give them instead of Provender. There be others which take the decoction of three Tortoyse being well sodden, (their Heads, Tails, Bones, and Feet being rejected) and giving it the Horse, suppose it fatteth suddainly: or if you mix the flesh of the Tortoyse so sodden with your Horses Provender, that is good also. But as the simples are *Fralian*, and not *English*, so I for mine own part, refer the use rather to them than to my Country-men. There be others which use to fat up their Horses, by giving them a certain Grain which we call *Boek*, in the same manner as we give Oats or Pease. There be others, which to fat a Horse will give him only parched Wheat, and a little Wine mixed with his water, and amongst his ordinary Provender alwayes some Wheat Bran; and be exceeding carefull that the Horse be clean Drest, well Rubbed, and soft Littered; for without such clean Keeping, there is no Meat will injoy, or do good upon him; and also when he is fedd, it must be by little at once, and not surfeited. There be other *Farriers*, which to feed up a lean Horse, will

will take Sage, Savin, Bay-berries, Earth nuts, Bears greafe, to drink with a quart of Wine. Others will give the Entrails of a Barbell or Tench with white Wine. Others will give new hot Draff, and new Bran, and twenty hard roasted Eggs, the shells being pulled off, then bruise them, and then put thereto a pretty quantity of Salt, then mix all together, and give a good quantity thereof to the Horse at Morn, Noon, and at Evening for his Provender; and once a day (which will be at High-noon) give him a quart or three pints of strong Ale, and when the Horse beginneth to be Glutted upon this meat, then give him dried Oats: if he be Glutted upon that then give him Bread, if he leave his Bread, give him Malt, or any Grain that he will eat with a good Appetite, observing ever to keep the Horse very warm, and with this Diet in fourteen dayes the leanest Horse will be made exceeding fat. There be other *Farriers* which to make a Horse fat, will take a quarter of Wine, and half an Ounce of Brimstone finely bearen with a raw Egg, and a penny weight of the powder of *Myrrh*; mix all together, and give it the Horse to drink many Mornings together. Others will take three-leaved Grass, half green, and half dry, and give it the Horse instead of Hay, by little at once, and it will fat suddainly, only it will breed much rank blood. Other *Farriers* use to take two penny worth of Pepper, and as much Saffron, Anniseeds and Turmerick, a penny worth of longe Pepper, two penny worth of Treacle, a penny worth of Licorras, a good quantity of Penirial, and Archangel: give the Horse these with the yolks of Eggs in Milk to drink. Others use to take Wheat made clean, and sod with Salt and Lard dried in the Sun, and give it twice a day before each Watering. Others strong Ale, *Myrrh*, Saller Oyl, and twenty grains of white Pepper, and instead of the Ale, you may take the Decoction, that is, the water wherein Sage and Rhue hath been sodden, it will soon make the Horse fat. Others take sodden Beans well bruised and sprinkled with Salt, adding to the water four times so much Bean flower, or Wheat bran, and give that to the Horse, and it will fat him suddainly. Wine mixt with the Blood of a sucking Pigg, made luke-warm, or Wine with the juyce of Feather-feaw, or an Ounce of Sulphur, and a penny weight of *Myrrh* well made into Powder, together with a new laid Egg, will raise up a Horse that languisheth. Barley dried, or Barley boyled till it burst, either will fatten a Horse.

 But the best way of fattening a Horse, (for most of the ways before prescribed are not to breed fat that will continue) is, first to give your Horse three Mornings together a pint of sweet Wine, and two spoonfull of *Diapente* brewed together: for that Drink will take away all infection and sickness from the inward parts: then to feed him well with Provender at least four times a day, that is, after his water in the Morning, after his water at Noon, after his water in the Evening, and after his water at 9 of the Clock at Night. Now you shall not let his Provender be all of one sort, but every meal, it may be, changed, as thus: if in the Morning you give him Oats, at Noon likewise you shall give him Bread, at Evening Beans or Pease mixt with Wheat Bran, at Night sodden Barley, &c. and ever observe, of what Food he eateth best, of that let him have the greatest plenty, and there is no question but he will in short space grow fat, sound, and full of spirit, without either dislike or sickness.

C H A P. LIX.

The Mirrour and Master of all Medicines, teaching how to make the leanest and unsoundest Horses that may be, fat, sound, and fit either for Market or Travail, in the space of fourteen dayes.

 IF your Horse be full of all the inward Diseases that may be, and brought to that dislike and poverty that you are desperate of his Life, you shall take of Anniseeds, of Cumin-seeds, of Fenugreek, of Carthamus, of Elicampane, of the flower of Brimston, of brown Sugar-candy, of each of these two Ounces beaten and searst to a very fine powder, then take an Ounce of the juyce of Licoras, and dissolve it in half a pint of White-wine, then take three Ounces of the Sirrup of Colts-foot, of Sallet-Oyl, and of life Honey, of each half a pint, then mix all this with the former Powders, and with as much Wheat flower as will bind and knit them altogether, work them into a stiff paste, and make thereof Balls as bigg as French Walnuts, Hulls and all, and so keep them in a close Gally-pot, and when you have occasion to use them, take one and annoint it with sweet Butter, and give it the Horse in the manner of a Pill, and Ride him a little after it, then feed and water him as at other times, and thus do (if it be to prevent

prevent sickness) for three or four Mornings together.

But if it be to take away infirmity, as Glanders, &c. then use it at least a Week or more.

But if to take away Molten-grease, then instantly after his heat, and in his heat.

But if it be to fatten a Horse, then use it at least a fort-night: now as you give them thus in the manner of a pill, so you may give them dissolved in sweet Wine, Ale, or Beer.

Lastly, if it be to fatten a Horse, then you shall take the second Balls: that is to say, of Wheat-meal six pound, or as Physicians write, *Quantum sufficit*, of Anniseeds two Ounces, of Cummin seeds six drams, of *Carthamus* one dram and a half, of Fenugreek seeds one Ounce two drams, of Brimstone one Ounce and a half, of Saller Oyl one pint two Ounces, of Honey one pound and a half, of White Wine four pints: This must be made into paste, the hard Simples being pounded into Powder, and finely searst, and then well kneaded together, and so made into Balls as big as a Mans fist, and then every Morning and Evening when you would water your Horse, dissolve into his Cold water one of these Balls, by lathering and chafing the same in the water, and then give it him to drink. The Horse it may be will be coy at the first to drink, but it is no matter, let him fast till he take it: for before two Balls be spent, he will refuse all waters for this only. This is the Medicine above all Medicines, and is truly the best scouring that can be given to any Horse whatsoever: for besides his wonderfull Feeding, it clenseth the Body from all bad Humours whatsoever.

CHAP. LX.

Of the Breast-pain, or pain in the Breast.

THOUGH most of our *Farrriers* are not curious to understand this Disease, because it is not so common as others: yet both myself and others find it is a Disease very apt to breed, and to indanger the Horse with Death. The *Italians* call it *Grannezza dipetto*, and it proceedeth from the superfluity of Blood and other gross Humours, which being dissolved by some extreme and disorderly heat, resorteth downward to the Breast, and paineth the Horse extremely that he

can hardly go. The signs are, a stiff staggering, and weak going with his Fore-leggs, and he can very hardly, or not at all bow down his Head to the ground, either to Eat or drink, and will groan much when he doth either the one or the other. The Cure is first to bathe all his Breast, and fore-booths with the Oyl of Peter, and if that do not help him within three or four daies, then to let him Blood on both his Breast-veins in the ordinary place, and then put in a Rowel either of Hair, Cork, Horn, or Leather, of all which, and the manner of Rowelling, you shall read in a more particular Chapter hereafter in the Book of *Chirurgery*.

Now there be other *Farriers*, which for this sickness, will first give the Horse an inward Drench, as namely, a pint of sweet Wine, and two spoonfull of Diapente, then bathe all his Breast and Legs with Wine and Oyl mingled together, and in some ten or twelve daies it will take away the grief.

C H A P. LXI.

Of the sickness of the Heart, called the Anticor.

THis sickness of the Heart, which by the ancient *Farriers* is called *Anticor*, as much as to say, against or contrary to the Heart, is a dangerous and mortal sickness, proceeding from the great abundance of Blood which is bred by too Curious and proud Keeping, where the Horse hath much meat, and little or no Labour, as for the most part your Geldings of price have, which running all the Summer at Grass, do nothing but gather their own food, and such like, where the Masters too much love and tenderness, is the means to bring the Horse to his Death, as we find daily in our practice: for when such naughty and corrupt Blood is gathered, it resorteth to the inward parts, and so suffocatech his Heart. The signs whereof are, the Horse will many times have a small swelling rise at the bottom of the Breast, which swelling will increase and rise upward even to the top of the Neck of the Horse, and then most assuredly it kills the Horse: he will also hang his Head either down to the Manger, or down to the Ground, forsaking his Food, and groaning with much painfulness. This Disease is of many an ignorant Smith taken sometimes for the Yellows, and sometimes for the Stagers, but you shall know.

know that it is not by these Observations: First, neither about the whites of his Eyes, nor the insides of his Lips shall you perceive any apparent Yellows, and so then it cannot be the Yellows, nor will he have any great swelling about his Eyes, nor dizziness in his Head, before he be at the point of Death; and so consequently it cannot be the Staggers. The Cure whereof is two-fold: the first a Prevention, or preservative before the Disease come; the second a Remedy after the Disease is apparent.

For the Prevention, or Preservative, you shall observe, that if your Horse live idly, either at Grass or in the Stable, and withall grow very Fat, which Fatness is never unaccompanied with Corruptness, that then you fail not to let him Blood in the Neck-vein before you turn him to Grass, or before you put him to feed in the Stable; and likewise let him Blood two or three Moneths after, when you see he is fed, and at each time of letting Blood, you must make your quantity according to the goodness of the Blood: for if the Blood be black and thick, which is a sign of Inflammation and Corruption, you shall take the more: if it be pure red, and thin, which is a sign of Strength and Healthfulness, you shall take little or none at all. There be others which use for this Prevention, to give the Horse a Scouring, or purgation of Malmsey, Oyl, and Sugar-candy, the making and use whereof you shall read in the Chapter of Purgations, and this would be given immediately when you put your Horse to feed, and as soon as you see his skin full swoln with fatness.

Now for the Remedy, when this Disease shall be apparent; you shall let him Blood on both his Platveins, or if the Smiths skill will not extend so far, then you shall let the Horse blood on the Neck-vein, and that he bleed abundantly: then you shall give him this Drink. Take a quart of malmsey, and put thereunto half a quarter of Sugar, and two Ounces of Cinamon beaten to powder and being made warm give it the Horse to drink: then keep him very warm in the Stable, stuffing him round about with soft Wisps very close, especially about the Stomach, lest the wind do annoy him: and let his ordinary Drink be warm Mathes of Malt and Water, and his Food only that, whatsoever it be, which he eateth with the best Stomach.

Now if you see any swelling to appear, whether it be soft or hard, then besides letting him Blood, you shall strike the swelling in divers places

places with a Fleam or Lancer, that the corruption may issue forth, then annoint it with Hogs-grease made warm: For that will either expell it, or bring it to a Head, especially if the swelling be kept exceeding warm. There be other Farriers which for this Disease use to let the Horse blood as is aforesaid, and then to give him a quart of Malmsey, well brewed with three spoonfull of the powder called *Diapente*, and if the Swelling arise, to lay thereunto nothing but Hay well sodden in old Urine, and then keep the same Diet as is aforesaid. Others use after the letting of Blood, to give the Horse no Drink, but only ten or twelve spoonfulls of that water which is called Doctor *Stephens* Water, and is not unknown to any Apothecary: and then for the rest of the Cure to proceed in all things as is before specified, and questionles I have seen strange effects of this practice.

C H A P. LXII.

Of tyred Horses.

Since we are thus far proceeded into the inward and vital parts of a Horses body, it is not amiss to speak something of the Tying of Horses, and of the remedies for the same, because when a Horse is truly tyred (as by over extreme Labour) it is questionles that all his Vital parts are made sick and feebled. For to tell you in more plainness what tying is, it is when a Horse by extreme and uncessant Labour, hath all his inward and vital Powers which should accompany and rejoice the Heart, expelled and driven outward to the outward parts, and less deserving Members, leaving the Heart forlorn and sick, insomuch that a General and Cold faintness spreadeth over the whole Body, and weakneth it, in such sort that it can indure no further Travail, till those lively Hears, Faculties and Powers be brought unto their natural and true places back again, and made to give comfort to the Heart whom their loss sickned.

Now for the tying of Horses, though in truth it proceedeth from no other cause but this before spoken, yet in as much as in our common and vulgar speech, we say every Horse that giveth over his Labour is tyred, you shall understand, that such giving over may proceed from four Causes: the first, from inward sickness: the second, from

from some Wound received either of Body or Limbs: the third, from dulness of Spirit, Cowardlines, or Restines; and the fourth from most extreme Labour and Travail, which is true tyredness indeed. Now for the first; which is inward sickness, you shall look into the general signs of every Disease, and if you find any of those signs to be apparent, you shall straight conclude upon that Disease, and taking away the cause thereof, have no doubt but the effect of his Tying will vanish with the same: for the second, which is by some wound received, as by cutting or dismembing the Sinews, Ligaments, Muscles, or by straining or stooming any bone or joynt, or by pricking in shoeing, or striking Nail, Iron, Stub or Thorn into the sole of the Horses foot, and such like.

Sith, the first is apparent to the Eye, by dis-joyning the skin, the other by Halting, you shall take a survey of your Horse, and finding any of them apparent, look what the grief is, repair to the latter part of this Book, which treateth of Chirurgery, and finding it there, use the means prescribed, and the tying will easily be Cured. Now for the third, which is dulness of Spirit, Cowardness or Restines, you shall find them by these signs: If he have no apparent sign either of inward sickness, or outward grief, neither sweateth much, nor sheweth any great alteration of countenance, Yet notwithstanding tyreth, and refuseth reasonable Labour, then such tying proceedeth from dulness of Spirit; but if after indifferent long Travail the Horse tyre, and then the man descending from his back, the Horse run or trot away, as though he were not tyred, the Man then mounting again, the Horse utterly refuse to go forward, such tying proceedeth from Cowardlines; but if a Horse within one, two, or three miles Riding, being temperately used, and being neither put to any trial of his strength, nor, as it were, scarcely warmed, if he in his best strength refuse Labour, and Tyre, it proceedeth only from Restines and ill Conditions. Then for the Cure of any of all these, proceeding from Dulness, Fearfulness, and Unwillingness, you shall take ordinary Window-glass, and beat it into fine powder: Then take up the skin of each side the Spur-vein between your Finger and your Thumb, and with a fine Naul or Bodkin, make divers small holes through his skin, then rub Glas powder very hard into those holes; which done, mount his Back, and do but offer to touch his side with your Heels, and be sure, if he have Life in him, he will go forward, the greatest
fear

fear being that he will still but go too fast : but after your journey is ended, and you alighted, you must not fail, (because this powder of Glais will corrode and rot his sides) to annoint both the sore places with the powder of Jet and Turpentine mixt together, for that will draw out the Venom, and heal his sides again. There be others which use when a Horse is tyred thus through dull Cowardliness or Restiness, to thrust a burning Brand or Iron into his Buttocks, or to bring bottles of blazing Straw about his Ears, there is neither of the Cures but is exceeding good.

But for the true tyred Horse, which tyreth through a natural faintness, drawn from exceeding Labour, the signs to know it, being long Travel, much Sweat, and willingness of Course during his strength : the Cure thereof, according to the opinion of some Farriers, is to pour oyl and Vinegar into his Nostrils, and to give him the drink of Sheeps-heads, mentioned in the Chapter of the Consumption of the flesh, being the 57 Chapter of this Book, and to bath his Leggs with a Comfortable bath, of which you shall find choice in the Chapter of Baths, or else charge them with this charge : Take of Bole-armony, and of Wheat-flower, of each half a pound, & a little Rozen beaten into fine powder, and a quart of strong Vinegar, mingle them well together, and cover all his Leggs therewith, and if it be in the Summer, turn him to Grass, and he will recover his weariness. Others use to take a slice of fresh Beef, having steeped it in Vinegar, lap it about your Bit or Snaffle, and having made it fast with a Threed, Ride your Horse there with, and he will hardly tyre: yet after your journey is ended, be sure to give your Horse rest, much warmth, & good feeding, that is, warm Mashcs, and store of Provender, or else he will be the worse whilst he liveth.

Now if it be so that your Horse tyre in such a place as the necessity of your occasions are to be preferred before the value of your Horse, and that you must seek unnatural means to controle Nature : In this case you shall take (where the powder of Glais before spoken of cannot be had) three or four round pibble Stones, and put them into one of his Ears, and then tye the Ear that the stones fall not out, and the noise of those stones will make the Horse go after he is utterly tyred; but if that fail, you shall with a Knife make a hole in the flap of the Horses Ear, and thrust a long rough stick, full of nicks, through the same; and ever as the Horse slacks his pace, so saw and fret the stick up and down in the hole, and be sure whilst he hath any Life he will not leave going.

Many other torments there are which be needless to Rehearse, only this is my most general advice, if at any time you tyre your Horse, to take of old Urine a quart, of Salt-peter three Ounces, boyl them well together, and bath all the Horses four legs in the same, and without question it will bring to the sinews their natural strength and nimbleness; and for other defects, warm and good keeping will Cure them.

And although some of our Northern Farriers do hold, that Oaten dough will prevent tyring, yet I have not approved it so, because I could never get any Horse that would eat it, the dough will so stick and clam in the Horses mouth: therefore I hold the Cures, already recited, to be fully sufficient. But for further satisfaction use these, which I reserved for mine own privacy.

Take a quart of strong Ale, and put thereto half an Ounce of the powder of Elicampane, and brew them well together, and give it the Horse with an Horn. 

Take a bunch of *Penerial*, and tye it to the mouth of your bit or snaffle, and it will preserve a Horse from tyring. Now if all these fail, then take off your Horses Saddle, and rub his back all over very hard with the herb called *Arsemart*, and lay *Arsemart* under his Saddle, and so Ride him. 

CHAP. LXIII.

Of the Diseases of the Stomack, and first of the Loathing of Meat.

THis Disease of the Loathing of Meat, is taken two wayes; the one a forsaking of Meat, as when a Horses mouth, either through the inflammation of his stomach, doth break out into Blisters, or such like Venemous sores; or when he hath the Lampas, Giggs, Woolfs teeth, and such like. The Cure of all, which you shall readily find in the second part of this Book, which treateth of Chirurgery: the other a dislike of his meat through the intemperature of his Stomach, being either too hot, as proceeding either from rankness of Blood, or extremity of Travail, as you may perceive by daily experience, when a Horse is set up in his Stable very hot, and meat instantly given him, it is all things to nothing, but he will loath and refuse it. Hence it comes, that I do ever hate the Noon-ride
 N bairing

baicing of horses, because Mens journys commonly crave haste, the Horse cannot take such a natural cooling as he ought before his meat, and thereby breeds much sickness and disease: for meat given presently after Travail when a horse is hot, is the Mother of all infirmity: or else it proceedeth from the intemperature of the Stomach, being too Cold, as being caused by some natural defect. Now if it proceed from heat only, which you shall know either by his sudden loathing of his Meat, or the extreme heat of his Mouth and Breath: Then to cool his Stomach again, you shall either wash his Tongue with Vinegar, or give him to drink Cold water mingled with Oyl and Vinegar. There be other Farriers which use to give this Drink: take of Milk and Wine of each one pint, and put therunto of Mel Rosatum three Ounces, and having washed his mouth with Vinegar and Salt, give him the drink luke-warm with a Horn. But if the loathing of his meat proceed from the coldness of his stomach, which only is known by the standing up and staring of the hair, Then by the opinion of the ancient Farriers, you shall give him Wine and Oyl mixt together divers Mornings to drink: but others of our late Farriers give Wine, Oyl, Rue, and Sage boyl'd together by a quart at a time to drink. Others to the former Compound will add white Pepper and Myrrh. Others use to give the horse Onions pill'd and chopt, and Rocket seed boyled and bruised in Wine. Others use to mix Wine with the blood of a Sow Pigg. Now to conclude, for the general forsaking or loathing of meat, proceeding either from hot or cold causes in the Stomach, there is nothing better than the green blades of Corn, (especially Wheat) being given in a good quantity, and that the time of the year serve for the gathering thereof. Others instead thereof, will give the Horse sweet Wine and the seeds of Gith mixt together, or else sweet Wine and Garlick well peel'd and stamp'd, being a long time brewed together.

C H A P. LXIII.

Of the casting out of the Horses drink.

THe ancient Farriers, especially the Italians, constantly do affirm, that a horse may have such a Palsy, proceeding from the Coldness of his stomach, that may make him unable to retain and keep his

his drink, but that many times he will vomit and cast it up again : For mine own part, from other causes, as from cold in the Head, where the Rhume bindeth about the Roots and Kirnels of the Tongue, hath as it were strangled and made straight the passages to the stomach : There I have many times seen a horse cast his water that he drank, in very abundant sort back again through his Nostrils, and sometimes strive with great earnestness to drink, but could not at all. The signs of both (from which cause soever it proceed) is only the casting up of his Drink or Water, and the Cure thereof is only to give him Cordial and warm drinks, as is Malmsey, Cinamon, Anniseeds, and Cloves, well brewed and mixt together, and to annoint his Breast, and under his Shoulders, with either the Oyl of Cyprus, Oyl of Spike, or the Oyl of Pepper, and to purge his Head with fumes or pills, such as will force him to sneeze, of which you may see store in a Chapter following : for such fumigations joyning with these hot Oyls, will soon dissolve the Humours.

C H A P. LXV.

Of Surfeiting with glut of Provender.

THere is not any Disease more easily procured, nor more dangerous to the life of a horse, than the Surfeit which is taken by the glut of Provender, it commeth most commonly by keeping the Horse extreme tharp and hungry, as either by long Travail, or long standing empty : and then in the height of Greediness, giving him such super-abundance of meat, that his stomach wanting strength to digest it, all the whole Body is driven into an infinite great pain and extremity. The signs are great weakness and feebleness in the horses limbs, so that he can hardly stand, but lieth down oft, and being down, walloweth and tumbleth up and down as if he had the Bots.

The Cure thereof, according to the common practice of our common Farriers, is, to take half a penny worth of black Sope, and a quart of new Milk, and as much sweet Butter as Sope, and having on a Chasing-dish and Coals, mix them together, and give it the Horse to Drink : this will cleanse the horses stomach, and bring it to it's strength again.

But the antient Farriers did use first, to let the horse blood in the Neck-vein, (because every Surfeit breeds distemperature in the blood) then trot the Horse up and down an hour and more, and if he cannot stale, draw out his Yard, and wash it with white Wine made luke-warm, and thrust into his yard either a Clove of Garlick, or a little Oyl of Camomile, with a piece of small Wax Candle. If he cannot Dung, first with your hand rake his Fundament, and then give him a Clister, of which you shall read hereafter: When his Clister is received, you shall Walk him up and down till he have emptied his Belly, then set him up, and keep him hungry the space of two or three dayes, observing ever to sprinkle the Hay he eateth with a little water, and let his Drink be warm Water and Bran made mash-wise: After he hath drunk the Drink, let him eat the Bran if he please, but from other Provender keep him still fasting, at the least ten dayes.

There be other Farriers, that in this case, use only to take a quart of Beer or Ale, and two penny-worth of Sallet-Oyl, and as much Dragon Water, a penny-worth of Treacle, and make all these warm upon the coals, then put in an Ounce of Cinamon, Anniseeds, and Cloves, all beaten together, and so give it the Horse luke-warm to drink.

☞ All these receipts are exceeding good, yet for mine own part, and many of the best Farriers confirm the same, that there is nothing better for this Disease than moderate Exercise, much Fasting, and once in four or five days a pint of sweet Wine, with two spoonfull of the powder of Diapente.

C H A P. LXVI.

Of Foundring in the Body, being a surfeit got either by Meat, Drink, or Labour.

THIS Disease of Foundring in the Body, is of all Surfeits the most vile, most dangerous, and most incident to horses that are daily Travailed; it proceedeth according to the opinion of some Farriers, from eating of much Provender suddenly after Labour; the Horse, being then, as it were, panting hot, (as we may daily see unskilfull Horse-men do at this day) whereby the meat which the Horse eateth,

not

not being digested, breedeth evill and gross Humours, which by little and little spread themselves thorough the Members, do at length oppress and almost confound the whole Body, absolutely taking away from him all his strength, insomuch that he can neither go nor bow his joynts, nor being laid, is able to rise again: Besides, it taketh away from him his Instrumental powers, as the office both of Urine and Excrements, which cannot be performed but with extreme pain. There be other Farriers, and to their opinion I rather lean, that suppose it proceedeth from suffering the Horse to drink too much in his Travail, being very hot, whereby the Grease being suddainly cooled, it doth clap about, and suffocate the inward parts with such a loathsome fulness, that without speedy evacuation, there can be no hope but of Death only. Now whereas some Farriers do hold, that this Foundring in the Body, should be no other than the Foundring in the legs, because it is (say they) a melting and dissolution of evil Humours which resort down-ward, they are much deceived: For it is not, as they hold, a dissolution of Humours, but rather a binding together of Corporal and Substantial evils, which by an unnatural accident doth torment the Heart: Now for the hold which they take of the name of Foundring, as if it were drawn from the French Word *Fundu*, signifying melting, truly I think it was rather the ignorance of our old Farriers, which knew not how to intitle the Disease, than any coherence it hath with the name it beareth. For mine own part, I am of opinion, that this Disease which we call Foundring in the body, doth not only proceed from the causes aforesaid, but also and most oftest by suddain washing Horses in the Winter-season, when they are extreme fat and hot with instant Travail, where the cold Vapour of the water striking into the Body, doth not only astonish the inward and vital parts, but also freezeth up the skin, and maketh the Blood to lose his office. Now the signs to perceive this Disease are, holding down of his Head, raising up of his Hair, Coughing, Staggering behind, trembling after Water, dislike of his Meat, Lcannels, Stiff going, Disability to rise when he is down: And to conclude, which is the chiefest sign of all other, his Belly will be clung up to his Back, and his Back rising up like a Camel.

The Cure, according to the opinion of the Farriers, is, first, to rake his Fundament, and then to give him a Clister: which done, and that the Horses belly is emptied, then take of Malmsey a quart,

of Sugar half a quartern, of Cinamon half an ounce, of Licoras, and Anniseeds, of each two spoonfull beaten into fine powder; which being put into the Malmsey, warm them together at the fire, so that the Hony may be molten, then give it the horse luke-warm to Drink: which done, walk him up and down either in the warm Stable, or some warm Road the space of an hour, then let him stand on the Bit fasting two hours more, only let him be warm Cloathed, Stopt, and Littered, and when you give him Hay, let it be sprinkled with Water, and let his Provender be very clean sifted from dust, and given by a little at once; and let his Drink be warm Mashcs of Malt and Water. Now when you see him recover and get a little strength, you shall then let him blood in the Neck-vein, and once a day perfume him with Frankincense to make him neese, and use to give him Exercise abroad when the weather is warm, and in the House when the weather is stormy.

Now there be other Farriers which use for this Disease, to take a half penny worth of Garlick, two penny worth of the powder of Pepper, two penny worth of the powder of Ginger, two penny worth of Grains bruised, and put all these into a pottle of strong Ale, and give it the Horse to drink by a quart at a time, dieting and ordering him as afore-said; and when he getteth strength, either let him blood in the Neck-vein, or the Spur-veins, or on both: to Conclude, there is no Drink nor Dyct which is comfortable, but it is most soveraign and good for this infirmity.

C H A P. LXVII.

Of the greedy Worm, or hungry evil in Horses.

THis hungry evil is a Disease more common, than found out by our Farriers, because the most of our Horse Masters being of great ignorance, hold it a special vertue to see a Horse eat eagerly, whereas indeed this over-hasty and greedy eating, is more rather an infirmity and sickness of the inward parts; and this Disease is none other than an insatiate and greedy eating, contrary to Nature and old Custom, and for the most part, it followeth some extreme great Emptiness, or want of natural Food, the beast being even at the pinch, and ready to be chap-faln. There be some Farriers which
suppose

suppose that it proceedeth from some extreme Cold outwardly taken by Travelling in Cold and Barren places, as in the Frost and Snow, where the outward Cold maketh the stomach cold, whereby all the inward powers are weakned. The signs are only an alteration or change in the Horses feeding, having lost all temperance, and snatching and chopping at his Meat, as if he would devour the Manger: The Cure, according to the opinion of some Farriers, is, first to comfort his stomach by giving him great slices of White bread toasted at the fire, and steeped in Muscadine, or else Bread untoasted, and steeped in Wine, and then to let him drink Wheat flower and Wine brewed together. There be others which use to Knead stiff Cakes of Wheat-flower and Wine, and to feed the Horse therewith. Others use to make him bread of Pinetree nuts and Wine mingled together, or else common Earth and Wine mingled together. But for mine own part, I hold nothing better than moderately feeding the Horse many times in the day with wholesome Bean bread, well Baked, or Oats well dried and sifted.

C H A P. LXVIII.

Of the Diseases of the Liver in General, and first of the Inflammation thereof.

THere is no question but the Liver of a Horse is subject to as many Diseases, as either the Liver of a Man or any other Creature, only through the ignorance of our common Farriers, (who make all inward Diseases one sickness) the true grounds and causes not being looked into, the infirmity is let pass, and many times poysoned with false potions; but true it is, that the Liver sometimes by the intemperateness thereof, as being either too hot or too cold, too moist, or too dry, or sometimes by means of evil Humours, as Cholera, or Flegm overflowing in the same, Heat ingendring Cholera, and Coldness Flegm, the Liver is subject to many sicknesses, & is diversly pained, as by Inflammations, Apostumation, or Ulcer, or by Obstructions, Stoppings, or hard Knobs: or lastly, by the Consumption of the whole substance thereof. The signs to know if the Disease proceed from Hot causes, is leanness of Body, the loathing of Meat, voiding Dung of a strong Scent, great Thirst, and looseness of Belly.

The

The signs to know if the Disease proceed from cold causes, is good state of Body, appetite of Meat, dung not Stinking, no Thirst, and the Belly neither loose nor costive. Now to proceed to the particular Diseases of the Liver, and first of the Inflammation, you shall understand that it commeth by means that the Blood through the abundance, thinness, boyling heat, or sharpness thereof, or through the Violence of some outward cause, breaketh out of the Veins, and floweth into the Body or Substance of the Liver; and so being disposed of his proper Vessels, doth immediately putrifie, and is inflamed, corrupting so much of the fleshy substance of the Liver, as is either touched or imbrued with the same, whence it commeth, that for the most part, the hollow side of the Liver is first consumed, yea, sometimes the full side also: This Inflammation by a natural heat is sometimes turned to Putrification, and then it is called an Apostumation: which when either by the strength of Nature or art, it doth break and run, then it is called an Ulcer, or filthy sore. Now the signs of an Inflammation on the hollow side of the Liver (which is the least hurtfull) is loathing of Meat, great Thirst, loosens of Belly, and a continual unwillingness to lye on the left side: but if the Inflammation be on the full side of the Liver, then the signs be short Breathing, a dry Cough, much Pain, when you handle the Horse about the Wind-pipe, and an unwillingness to lye on the right side. The signs of Apostumation is great heat, long fetching of breath, and a continual looking to his side. The signs of Ulceration, is continual coldness, starting up the hair, and much feebleness and fainting, because the filthy matter casting evil Vapours abroad, doth many times corrupt the Heart and occasion Death. Now for the Cure of these Inflammations, some Farriers use to take a quart of Ale, an Ounce of Myrrh, an Ounce of Frankincense, and brewing them well together, give it the Horse divers mornings to drink. Others use to take three Ounces of the seeds of Smallage, and three Ounces of Hyfop, and as much Southerwort, and boyl them well in Oyl and Wine mingled together, and give the Horse to drink; keep the Horse warm, and let him neither drink cold water, nor eat dry dusty Hay.

C H A P. LXIX.

Of Obstructions, Stoppings, or hard Knobs on the Liver.

THese Obstructions or Stoppings of a Horses Liver, do come most commonly by Travelling or Labour on a full Stomach, whereby the meat not being perfectly digested, breedeth gross and tough Humours, which Humours by the extremity of Travel, are violently driven into the small Veins, through which the Liver ought to receive good Nutriment, and so by that means breedeth Obstructions and Stoppings. Now from these Obstructions, (when they have continued any long time) especially if the Humours be Cholerick, breedeth many times hard Knobs on the Liver, which Knobs maketh the Horse continually lye on his right side, and never on the left, because if he should lye on the left side, the weight of the Knob would oppress the Stomach, and even sicken all the Vital parts in him.

The signs of these Obstructions or Stoppings, are Heaviness of Countenance, Distention or Swelling, great Dalness and Sloath in the Horse when he beginneth his Travail, and a continual looking back to his short Ribs, where remaineth his greatest pain and torment. Now the Cure thereof, is, to seeth continually in the water which he drinketh, *Agrimony, Fumitory, Camomill, Wormwood, Licoras, Anniseeds, Smallage, Parsley, Spiknard, Gentian, Succory, Endive* and *Lupins*, the Verrues whereof are most comfortable to the Liver. But forasmuch as the most part of our English Farriers are very simple Smiths, whose Capacities are unable to dive into these several distinctions, and that this Work (or Master-piece) is intended for the weakest Brain whatsoever: You shall understand, that there be certain general signs to know when the Liver of a Horse is grieved with any grief, of what Nature or Condition soever it be; and so likewise general Receipts to Cure all the griefs, without distinguishing or knowing their Natures: You shall know then if a Horse have any grief or pain in his Liver by these signs. First, by a loathing of his Meat; next, by the wasting of his Flesh, driness of his Mouth, and roughness of his Tongue, and great swelling thereof, and refusing to lye on the side grieved: And lastly, a continual looking backward.

Now the general Cures for the sickness of the Liver, is, according to the opinion of the ancient Farriers, to give the Horse Alces dissolved in sweet Wine, for it both purgeth and comforteth the Liver. Others use to give him to drink Ireos stamp and mixt with Wine and Water together, or instead of Ireos, to give him Calamint, called of the Latins Polimonia. Others give Savery with Oyl and Wine mixt together. Others use Liver-wort and Agrimony with Wine and Oyl. Others use comfortable Frictions, and to steep his Provender in warm Water, and to mix with his Provender a little Nitrum, not forgetting to let him stand warm, and lye soft: But that which is generally praised above all Medicines, is, to give the Horse a Wolfs Liver beaten to powder, and mixt either with Wine, Water, Oyl, or any other Medicine.

Now for a conclusion of this Chapter, if the Farriers skill be so good, that he can distinguish the Nature of each several infirmity about the Liver; then I would have him for to understand, that for Inflammations (which are the first beginners of all Diseases) would be used simples that mollifie and disperse Humours, as be these, Linseed, Fenugreek, Camomil, Anniseeds, Mellilot, and such like; to which mollifying simples, would be ever added some simples that are astringent or binning, as are these Red Rose leaves, Bramble leaves, Worm-wood, Plainrain, Myrrh, Mastick, Storax, and such like. Now for A postumes, they are to be ripened and voided, and Ulcers must be cleanted and scoured down ward, either by Excrement or Urine, and therefore the use of such simples as provoke either the one or the other, (of which you shall find plenty in other Chapters) is most necessary.

C H A P. LXX.

Of the Consumption of the Liver.

OF the Consumption of the Liver, I have spoken something in the Chapter of the Mourning of the Chine: yet because amongst our best Farriers it is diversly taken, I will shew you their divers opinions. First, some hold it cometh only from sudden cold after heat, taken either by drinking or standing still. Others hold it cometh of any Humour, especially of Cholerick matter, shed

shed throughout the whole substance of the Liver, which rotting by leafurable degrees, doth in the end corrupt and confound all the substance of the Liver, proceeding, as they think, from corrupt Meats, and sweet Drinks. And the last thinketh it commeth by extreme heat gotten in Travail, which inflaming the Blood, doth afterward putrifie, corrupt, and exulcerate the whole substance of the Liver: because the Liver is spongy like the Lungs, therefore the Cure of this Disease is held desperate; yet it bringeth no speedy or sudden Death, but a wasting and lingring infirmity: For the Liver being corrupted, digestion is taken away, and so the Body for want of good Nutriment, doth in time consume. The signs of this Disease is a loathing of Meat, and a stretching forth of the Horses Body at length as he standeth, he will seldome or never lye down, his Breath will stink marvelously, and he will continually cast exceeding foul matter, either at one Nostril, or at both, according as one side, or both sides of the Liver is consumed; and on that side which he casteth, he will ever have betwixt his neather jawes, about the middest of them, a hard Knob or Kirnel about the bigness of a Walnut. Now the preservative of this Disease, (for in truth it is incurable) is, according to the opinion of some Farriers, to take half a pint of Malmsey, and as much of the blood of a young Pigg, and to give it the Horse luke-warm to drink. Other Farriers use to give the Horse no other Food for the space of three dayes, than warm Wort, and Oats baked in an Oven, being sure that the Horse be kept fasting the first Night before he receive his Medicine. Others suppose, that if into the Wort which he drinketh, you do put every Morning two or three spoonfull of the powder made of Agrimony, red Rose leaves, Saccharum Rosaceum, Diarchadon Abbatis, Disantelon, Licoras, and of the Liver of a Woolf, that is more excellent. Others hold that this powder given with Goats milk luke-warm, is very good. Others hold that Malmsey, and the juyce of Fetherfew given to drink is also good.

Others use (and hold it equal with the best) to take an Ounce of Sulphur Vive beaten into fine powder, and a penny weight of Myrrh beaten to fine powder, mix them together with a new laid Egge, and give them to drink with half a pint of Malmsey; use this divers times, and keep the Horse fasting, yet separate him from other horses, for this Disease is infectious.

C H A P. LXXI.

Of the Diseases of the Gall.

AS is the Liver, even so the Gall of a Horse is subject to divers and many Infirmities, as to Obstructions, according to the opinion of old Farriers: from whence floweth the fulness and emptiness of the Bladder, and Stone in the Gall. And these Obstructions do chance two several wayes: First, when the passage by which Choler should pass from the Liver unto the Bladder of the Gall, as unto his proper Receptacle, is stopped; and so the Bladder of the Gall remaineth empty: for you are to understand, that the Gall is none other thing than a long, slender, little greenish Bladder, fixed underneath the Liver, which doth receive all the Cholerick bitter moisture, which would otherwise offend not only the Liver, but the whole Body also. Now if the passage of this necessary Vessel be stopped, there cannot chuse but follow many infirmities, as either Vomiting, the Lax, the Bloody-flux, or the Yellows.

Secondly, when the way whereby such Choler should issue forth of the Bladder of the Gall, down into the Guts and Excrements, is closed up, and so superaboundeth with too much Choler; from whence springeth dulness of Spirit, Suffocating, Belching, Heat, Thirst, and disposition to rage and fury; and truly to any Beast there is not a more dangerous Disease, than the over-flowing of the Gall: But our latter experience findeth that a Horse hath no Gall at all; but that filthy and corrupt matter is wasted and spent, either by Sweat, Exercise, or else doth turn to infirmity. The signs of both these kinds of Evils, or Obstructions, are yellowness of the Skin, infected with yellow Jaundise, and a continual C stiffness of the Body: and the Cures of them are, according to the most ancient Farriers, to give the Horse Milk, and great store of Saffron, boyled together, or instead of Milk, to give Ale, Saffron, and Anniseeds mixt together. But there be other Farriers, with whom I more do agree, which hold, that Selladine Roots and Leaves chopt and bruised, and boyled in Beer; or for want of Selladine, Rue, or Herb of grace, and given the Horse luke-warm to Drink, is most soveraign.

Now for the Stone in the Gall, which is of a blackish Colour, it cometh from the Obstruction of the Conduits of the Bladder, whereby the Choler being too long kept in, becommeth dry, and so converteth first into Gravel, and after into a solid and hard Stone, of which both the signs and the Cures are those last before Rehearsed.

C H A P. LXXII.

Of all such Diseases as are incident to the Spleen.

THe Spleen is a Long, Narrow, Flat, Spungy substance, of a pale fleshy Colour, joyning with the Liver and the Gall, it is the Recepracle of Melancholy, and the Dregs of the Blood, and is as subject to Infirmity, as any inward Member whatsoever, as to Inflammations, Obstructions, Knobs, and Swellings; it is through the Sponginess, apt to suck in all manner of filth, and to dilate and spread the same over the whole Body: The appearance thereof is on the left side under the short Ribs, where you shall perceive some small Swelling, which swelling gives great grief to the Midriff, especially after a full Stomach, taking away much more of the Horses Digestion than his Appetite; and being suffered to continue, it makes faint the Heart, and grows in the end to a hard Knob, or stony Substance.

This Disease, or Diseases of the Spleen, are incident to Horses most in the Summer, proceeding from the Surfeit, or greedy eating of green Meats. The signs of which Diseases are these, Heaviness, Dulness, pain on the Left side, and hard Swellings, short Breath, much Groaning, and an over hasty desire to his Meat. The Cure, according to the opinion of our best Farriers, is, to make the Horse sweat either by Labour or Cloaths, then to give him to drink a quart of White-Wine, wherein hath been boyled the leaves of Tamarisk bruised, and a good quantity of Cumin seed beaten to powder, and give it luke-warm. Others use, after the Horse hath sweat, to pour into his left Nostril every day, the juyce of Myrabolans, mixt with Wine and Water, to the quantity of a pint. Others take Cumin-seed and Honey of each six Ounces, of Lacerpitium as much as a Bean, of Vinegar a pint, and put all these into three quarts of water, and let it stand so all Night, and give the Horse a quart thereof next Morning,

Morning, having fasted all night. Others make the Horse to drink of Garlick, Nitrum, Hare-hound, and Worm-wood sodden in sharp Wine, and to bathe all the Horses left side with warm water, and to rub it hard. There be others which use to Cauterize or Scarrafie the Horses left side with a hot Iron; but it is barbarous and vile, and carrieth no judgment in the practice.

C H A P. LXXII.

Of the Yellows or Jaundise.

AS before I said, from the Obstructions or Over-flowings of the Gall and Spleen, doth spring this Disease which our common Smiths call the Yellows, and our better Farriers the Jaundise; and you shall understand, that of this Yellows or Jaundise, there are two kinds, the first an over-flowing of Choler, proceeding from the sickness of the Gall, and it is called simply the Yellows, or yellow Jaundise; because the outward parts of the Body, as Eyes, Skin, Mouth, inside of the Lips, and the like, are dried and coloured Yellow: the other an Over-flowing of Melancholy, proceeding from the sickness of the Spleen, and is called the black Yellows, or Black Jaundise, because all the outward parts are black. Now both these Jaundise, or Yellows, have their beginnings from the evils of the Liver; the yellow Jaundise, when the Liver by inflammation hath all his Blood converted into Choler, and so over-whelms the Body: and the black Jaundise, when some Obstructions in the Liver-vein, which goeth to the Spleen, hindreth the Spleen from doing his Office, and receiving the dregs of Blood from the Liver, or else when the Spleen is sur-charged with such dregs of Blood, and so sheddeth them back again into the Veins.

Now although this distinction of the black Jaundise, or black Yellows, will appear strange unto our common Farriers, yet it is most certain, that whensoever a Horse dyeth of the Yellows, he dyeth only of the black Yellows: for when it commeth unto the case of Morality, then are all the inward powers converted to Blackness, and the Yellow substance is clean Mastred; but whilst the matter is Yellow, so long the Horses Body is in good state of recovery. Besides, these Yellows do ever follow one the other, and the lesser hath no sooner

sooner got preheminence, but the greater pursues him; of all the inward Diseases in a Horses Body, that is most common, of finest in practice, and yet most mortal, if it be not early prevented. The signs of this Disease of yellow Jaundise, are yellowness of his Eyes, Nostrils, inside of the Lips, the Skin, the Yard, and the Urine: his Ears and his Flank will sweat, and he will Groan when he lyeth down, and he will not only be faint, but utterly forsake his Meat also. The Cures which are at this day in practice for this Disease, are infinite, and a World of them corrupt and poysonous: Every Smith almost making a Medicine of his own invention, God knows weak, and to little purpose, but for the best Receipts which at this day are used by any good Farriers whatsoever, I will deliver you the whole Caralogue.

First, for the Ancient Farriers, both Italian and French, they did use to take of Tyme and Cumin, of each like quantity, and stamping them together, to mingle it with Wine, Hony, and Water; and then to let him Blood in the Pisterns.

But now the Farriers of latter dayes use, first to let the Horse blood in the Neck-vein, suffering him to bleed, till you perceive the Blood to grow pure, then to give him this Drink: Take of white-Wine or Ale a quart, and put thereunto Saffron, and Turmerick, of each half an Ounce, and the juyce that is wrung out of a great handfull of Selladine, and being luke-warm, give it the Horse to Drink, then keep him warm the space of three or four dayes, giving him warm Water with a little Bran in it. Others use after the Horse is let blood in the Neck-vein, First to Rake him, then to give him a suppositary made of Salt, Honey, and Marjoram, and then give him to drink half an Ounce of Myrrh dissolved in a quart of Wine or Ale. Others use to give after Blood-letting, only cold Water and Nitrum mixt together. There be others, which after Blood-letting, will only stop his Ears with Selladine, and then bind them fast up, and let him have no Exercise for twelve hours after. Others use, after the letting him Blood, to give him a Clister, then to take Saffron, and Turmerick, and mixing them with a quart of Milk, give it him to drink luke-warm. Others use to let the Horse blood in the third barr of the Roof of his Mouth, with a sharp Knife, and after he hath bled well, to take a half penny worth of English Saffron, and a penny-worth of Turmerick, and a new laid Egg, with the shell and

all small broken, and mix it in a quart of stale Ale or Beer, and so let him up warm.

Others use to take after Blood letting, of Turmerick, and Saffron, alike quantity, and two or three Cloves, and six spoonfull of Vinegar and Verjuyce, and to put into each Ear of the Horse, three spoonfulls thereof, and then stop his Ears with black Wool, and so tye them up for seven or eight dayes after. Others take long Pepper, Grains, Turmerick, and Licoras, all beaten into fine powder, then brew them with a quart of strong Beer or Ale, and give it the Horse to drink. Others use after taking and Blood-letting, to take the juyce of Ivy-leaves, and mingling it with Wine, to squirt it into the Horses Nostrils, and to let him Drink only cold Water mixt with Nitrums, and let his Food be Grasse, or new Hay sprinkled with Water.

Thus you have seen, I dare well affirm, all the best practices which are at this day known for this Disease, and where they all fail, there is no hope of Cure, (as the old Farriers affirm) yet let me thus far further inform you, This Disease of the Yellows or Jaundise, if the Keeper and Master be not a great deal the more skilfull and careful, will steal upon you unawares, and (as I have often seen) when you are in the midst of your Journey, remote and distant far from any Town that can give you succour, it may be your Horse will fall down under you, and if you should let him rest till you fetch him succour, questionles he will be Dead.

In this extremity you have no help, but to draw out a sharp pointed Knife, Dagger, or Rapier for a need, and as near as you can, opening the Horses mouth, strike him Blood about the third bar of the Roof of his Mouth, and so letting him eat and swallow his own Blood a good while, then raise him up, and be sure he will go as fresh as ever he did: But after you come to a place of rest, then be sure to Blood him, and give him ha'f an Ounce of the powder of Diapente in a pint of Muskadine well brewed together, and thus do three or four Mornings together, and let him be fasting before, and fast two hours after; and after the Potion give him a little moderate Exercise, or else there will a worse fit come upon him.

Now to conclude for the black Jaundise, which of some Farriers is called the dry Yellows, though for mine own part I hold it to be incurable; yet there be other Farriers which are of a contrary Humour, and prescribe this Physick for the Cure thereof: First, to give the

the Horse a Clister made of Oyl, Water, Milk, and Nitrum, after his Fundament is raked, then to pour the Decoction of Mallows mingled with sweet Wine in his Nostrils, and let his Mear be Grass or Hay sprinkled with water, and a little Nitre, and his Provender dried Oats: He must rest from Labour, and be often Rubbed. Now there be other Farriers, which for this Disease would only have the Horse drink the Decoction of wild Coleworts sodden in Wine; the effects of all which I only refer to Experience.

C H A P. LXXIII.

Of the Dropsie, or evil habit of the Body.

WHereas we have spoken before of the Consumption of the Flesh, which proceedeth from Surfeits, ill Lodging, Labour, Colds, Heats, and such like: you shall also now understand, that there is another Driness or Consumption of the flesh, which hath no apparent cause or ground, and is called of Farriers a Dropsie, or evil habit of the Body, which is most apparently seen, when the Horse by dislike doth lose his true natural Colour, and when Baynes turns to Dannels, Blackness to Duskiness, and Whitnes to Ashines, and when he loseth his Spirit, Strength, and Alacrity. Now this commeth not from the want of Nutriment, but from the want of good Nutriment, in that the Blood is corrupted either with Flegm, Choler, or Melancholy, comming (according to the opinion of our best Farriers) either from the Spleen, or the weakness of the Stomach or Liver, causing naughty Digestion.

Others think it commeth from Foul Feeding, or much Idleness, but for mine own part, albeit I have had as much tryal of this Disease, as any one Man, and that it becommeth not me to controule men of approved judgment; yet this I dare averr, that I never saw this Disease of the evil Habit, or evil Colour of the Body, spring from any other grounds, than either Disorderly and Wild Riding, or from Hunger, or barren Woody Keeping. Betwixt it and the Dropsie, there is small or no difference. For the Dropsie being divided into three kinds, this is the first thereof, as namely, an universal swelling of the Body, but especially the Leggs, through the abundance of water lying between the skin and the flesh. The second, a swelling

in the covering or bottom of his Belly, as if the Horse were with foal which is only a watrish Humour abiding betwixt the skin and the rim: And the third, a swelling in the same place by the like Humours, abideth betwixt the great bag and the Kell.

The common signs of this Disease, are shortness of Breath, swelling of the Body or Legs, loss of the Horse; natural Colour, no appetite unto Meat, and a continual Thirst; his Back, Buttocks, and Flanks will be dry, and shrunk up to their Bones; his Veins will be hid that you cannot see them, and wheresoever you shall press your finger any thing hard against his Body, there you shall leave the print behind you, and the flesh will not rise of a good space after: when he lyeth down he will spread out his Limbs, and not draw them round together, and his hair will shed with the smallest rubbing. There be other Farriers which make but only two Dropsies, that is a wet Dropse, and a windy Dropse, but being examined, they are all one with those recited, have all the same Signs and the same Cure, which according to the antient Farriers is in this sort: first to let him be warm covered with many Cloaths, and either by Exercise, or otherwise drive him into a sweat; then let his Back and Body be rubbed against the hair, and let his Food be for the most part, Colts-worts, Smallage, and Elming Boughs, or whatsoever else will keep his Body soluble or provoke Urine: when you want this Food, let him eat Grass, or Hay sprinkled with water, and sometimes you may give him a kind of Pulse called Ciche, steeped a day and a night in Water, and then taken out and layd so, as the Water may drop away.

There be other Farriers which only would have the Horse to drink Parsley stampd and mixt with Wine, or else the Root of the herb called Panax stampd and mixt with Wine. Now whereas some Farriers advise to slit the Belly a handfull behind the Navel, that the Wind and Water may leisurely issue forth, of mine own Knowledge, I know the Cure to be most vile; nor can it be done, but to the utter spoil and Killing of the Horse: for a Horse is a Beast, and wanting knowledge of his own good, will never be dress'd but by Violence, and that Violence will bring down his Kell, so as it will never be recovered. Now for these Dropsies in the Belly, although I have shewed you the Signs and the Cures, yet they are Rare to be found, and more Rare to be Cured; but for the other Dropse, which is the swelling of the Legs, and the loss of the Colour of the hair,

hair, it is very ordinary and in hourly practice: the best Cure whereof, that ever I found amongst the Farriers, is this.

Take of strong Ale a Gallon, and set it on the fire, and then skum off the White froth which riseth, then take a handfull of Worm-wood with stalks, and put them into the Ale, and let them boyl till it be come almost to a quart: then take it off, and strain it exceedingly, then dissolve into it three Ounces of the best Treacle, and put in also an Ounce and a half of long Pepper and Grains beaten to very fine powder: then brew them all together till it be no more but luke-warm, and so give it the Horse to drink; the next day let him blood on the Neck-vein, and annoint his Forelegs with train Oyl, and so turn him into good Grass, and fear not his Recovery.

C H A P. LXXV.

Of the Diseases in the Guts of a Horse, and first of the Cholick.

A Horses Guts are subject unto many and sundry infirmities: as namely, to the wind Cholick, fretting of the Belly, Costiveness, Laxe, Bloody-flux, and Worms of divers kinds. Now for the Cholick, it is a grievous and tormenting pain in the great Gut or Bag, which, because it is very large and spacious, and full of empty places, it is the more apt to receive divers offensive matters, which do breed divers infirmities, especially Wind, which finding no ready passage out, maketh the Body, as it were, swell, and offendeth both the stomach and other inward Members. This Disease doth not so much appear in the Stable, as abroad in Travail, and the signs are these: the Horse will often offer to stale, but cannot; he will strike at his Belly with his hinder foot, and many times stamp; he will forsake his Meat, and towards his Flank you shall see his Belly appear more full than ordinary, and he will desire to lye down and wallow. The Cure thereof, according to the most ancient Farriers, is, only to give him a Clister made either of Wild Cucumbers, or else of Hens-dung, Nitrum, and strong Vinegar, the manner whereof you shall see in the Chapter of Clisters, and after the Clister labour him.

Others use to give the Horse the Urine of a child to drink, or a Clister of Sope and Salt water. Others use to give him five drams of

Myrrh in good wine, and then Gallop him gently thereupon. Others use to give him Smalage and Paſſey with his Provender, and then to Travail him till he ſweat. But for my own part, I hold it beſt to take a quart of Malmſey, of Cloves, Pepper, Cinamon, of each half an Ounce, of Sugar half a quartern, and give it the Horſe luke-warm, and then Ride him at leaſt an hour after; but before you Ride him, annoint all his Flanks with Oyl-de bay, or Oyl of Spike. Now if whiſt you Ride him he will not Dung, you ſhall then Rake him, and if need be, enforce him to Dung, by thruſting into his Fundament a pill'd Onion Jagg'd Croſs-wayes, that the tickling of the Jayce may inforce Ordure: and by no means, for four or five dayes let him drink no Cold water, nor eat any Graſs or green Corn, but keep him upon whoeſome dry Meat in a warm Stable.

C H A P. LXXVI.

Of the Belly-ake, or Fretting in the Belly.

BEſides the Cholick; there is alſo another grievous pain in the Belly, which Farriers call the Belly-ake, or Fretting in the Belly; and it proceedeth either from eating of Green Pulſe, when it grows on the ground, or raw undried Peaſe, Beans, or Oats, or elſe when ſharp fretting Hamours, or Inflammations, or abundance of groſs matter is gotten between the great Gut and the Panicle. The ſigns are much Wallowing, great Groaning, and often ſtriking at his Belly, and Gnawing upon the Manger. The Cure, according to the opinion of ſome Farriers, is, firſt to annoint your hand with Sallet-Oyl, Butter or greaſe, and then thruſting it in at the Horſes Fundament, pull out as much Dung as you can reach, which is called raking a Horſe: then give him a Cliſter of water and Salt mix'd together, or inſtead thereof, give him a Suppoſitory of Honey and Salt, and then give him to Drink the powder of Centuary and worm-wood brew'd with a quart of Malmſey. Others uſe only to give the Horſe a Suppoſitory of New-caſtle Sope, and for mine own part, I hold it only the beſt.

C H A P. LXXVII.

Of the Costiveness, or Belly-bound.

Costiveness, or Belly-bound, is, when a Horse is so bound in his Belly, that he cannot Dang; it is a Disease of all other most incident to Running Horses, which are kept in a dry and hot Dyer. Now my Masters, the great Farriers, affirm, that it proceedeth from Glut of Provender, or over-much Feeding, and Rest; or from wind, gross Humours, or Cold, causing Obstructions, and Stoppings in the Guts; but I suppose (and imagine that all the best Keepers of Hunting or Running Horses will consent with me) that it rather proceeds from much Fasting, whereby the Gut wanting fresh substance to fill it, doth out of its own great Heat, bake and dry up the litle which it containeth; For it is a certain Rule, that nothing can overflow before it be full. Or else it may proceed from eating too much dry and hot Food, which sucking up the slegm and moisture of the Body, leaves not sufficient whereby it may be digested; however, it is a dangerous infirmity, and is the beginning of many other evils. The signs are only abstinence from the office of Nature, (I mean Danging) which is most usual in all Beasts. The Cure whereof, according to the opinion of the Ancientest Farriers, is, to take the water wherein Mallows have been long boyled, to the quantity of a quart, and put thereto half a pint of Oyl, or instead thereof, half a pint of Butter very sweet, and one Ounce of Benedicte Laxati, and pour that into his Fundament Clisterwise: then with a string fasten his Tail hard to his Tucl, and then trot the Horse up and down a pretty while, that the Medicine may work so much the better; then let his Tail loose, and suffer him to void all that is in his Belly; then bring him into the Stable, and having stood a while, give him a litle well-clarified Honey to drink; then cover him and keep him warm, and let his Drink for three or four dayes be nothing but sweet warm Mashcs of Malt and water. Other Farriers use to take eleven leaves of Lorrel, and stamping them in a Mortar, give it the Horse to drink with one quart of good strong Ale.

Others use to take an Ounce of Brimstone finely beaten to powder, and mixing it with Spurge, to give it the Horse in a Mash to drink.

drink. Now for mine own part, I could wish you, if the Disease be not very extremely Violent, only but to rake the Horses Fundament, and then to Gallop him in his Cloaths till he sweat, and then give him a handfull or two of clean Rye, and a little Brimstone mixt with it: for Brimstone being given with Provender at any time, will scoure: but if the Disease be Raging and Violent, take a quarter of a pound of white Sope, a handfull of Spurge, and a handfull of Hemp-seed, bray them very well together, and give it the Horse to drink with a quart of Ale luke-warm, then let him Fast, and Exercise him more than half an hour after; and be sure to keep him very warm, and let his Drink be only warm Mashcs. A World of other scouring Receipts there be: but you shall find them more at large in the Chapter of Purgations, Clifters, and Suppositories.

C H A P. LXXVIII.

Of the Lax, or too much Scouring of Horses.

THe Lax, or open flux of a Horses body, is a dangerous Disease, and quickly bringeth a Horse to great weaknes and faintnes; It proceedeth sometimes from the abundance of Cholerick Humours, descending from the Liver or Gall down into the Guts: sometimes by drinking over-much cold water immediately after his Provender; sometimes by suddain Travelling upon a full stomach before his Meat be digested; sometimes by hasty Running or Galloping presently after Water; and sometimes by licking up a Feather, or eating Hens-dung: there is no Disease that taketh more sore upon a Horse in a short time than this, and yet, sith Nature her self in this Disease seemeth to be a Physician to the Horses body, I would not wish any Farrier to go about too suddenly to stop it; but if you find that by the continuance, Nature both loseth her own strength, and the Horse the good estate of his Body, then you shall seek remedy, and the Cure thereof, according to the opinion of ancient Farriers, is this: Take of Bean-flower, and Bole-Armeny, of each a quartern, mix them together in a quart of Red Wine, and give it the Horse luke-warm to drink, and let him be kept very warm, and have much rest: also let the water that he drinketh be luke-warm, and mixt with Bean flower; yet by no means let him drink above once

in four and twenty hours, and then not to his full satisfaction. Others take a pint of Red wine, the powder of one Nutmeg, half an Ounce of Cinamon, & as much of the Rind of a Pomegranat, & mixing them together, give it the horse luke-warm to drink, & let him not drink any other Drink, except it be once in four and twenty hours, half a Horse-draught of warm water mixt with Bean-flower. Others take a half-peny worth of Allom beaten into fine powder, & Bole-Armeny beaten small, and a quart of good Milk, mingle them together till the Milk be all on a Curd, and then give it the Horse to drink, observing the Dyer before rehearsed: But if this Disease shall happen to a sucking Foal, as commonly it will, and I my self have seen many that for want of Experience have perished thereby, you shall then only give it a pint of strong Verges to drink, and it is a present remedy. For the Foal only feeding upon Milk, and that Milk avoiding in as liquid form as it was received, the Verges will curdle it, and so make it avoid in a grosser and more tougher substance.

C H A P. LXXIX.

Of the Bloody-flux in Horses.

IT is not to be doubted, but that a Horse may have the Bloody-flux, for in my Experience I have seen it, besides the confirmation of all my Masters, the old Farriers. Now of the Bloody-flux they make divers kinds, for sometimes the fat of the slimy filth which is avoided, is sprinkled with a little Blood; sometimes the Excrements is watrish Blood, like the Water wherein Bloody flesh hath been washed; sometimes Blood mixed with Melancholy, and sometimes pure Blood: but all these proceeding from one Head, which is the Exulceration of the Gut, they may all very well be helped by one Cure. Yet that you may know whether the Exulceration be in the inward small Guts, or in the outward great Gut, you shall observe if the Matter and Blood be perfectly mixt together, then it is the inner small Guts; but if they be not mixed, but come out severally, the Blood most commonly following the Matter, then it is in the thick outward Guts. Now this Bloody flux cometh most commonly of some sharp Humours, ingendring either by naughty raw Food, or unreasonable Travel, which Humours being violently driven,

driven, and having passed through many Crooked and Narrow wayes, do cleave to the Guts, and with their heat and sharpness free them and cause Exulcerations and grievous pain. Sometimes this Bloody-flux may come from extreme Cold, extreme Heat, or extreme Moistness, or through the Violence of some extreme Scouring formerly given, wherein some poysonous simple, as Siomony, Sibium, or such like, may be applied in too great a quantity; or it may come from the weakness of the Liver, or other Members, which serve for Digestion. The sign of this Disease, is only the avoiding Blood with his Excrements, or Blood instead of Excrements: And the Cure, according to the opinion of the ancient Farriers, is to take Saffron one Ounce, of Myrrh two Ounces, of Southern-wood three Ounces, of Parsley one Ounce, of Rue three Ounces, of Spittle-wort, and Hyssop, of each two Ounces, of Cassia, which is like Cinamon, one Ounce, let all these be beaten into fine powder, and mingled with Chalk and strong Vinegar wrought into a paste, of which paste make little Cakes, and dry them in the shadow, and being dried dissolve some of them in a pint and a half of Barley-milk, or for want thereof, in that juyce which is called Crimor Prifame, and give it the Horse to Drink: for it not only Cureth the Bloody-flux, but being given with a quart of warm Water, it healeth all grief and pain either in the Belly or Bladder, which commeth for want of staling.

Now for mine own part, I have ever used for the Bloody-flux, but this Medicine only. Take of Red Wine three pints, half a handfull of the Herb called *Burfa Pastoris*, or Shephards purse, and as much Tanners bark taken out of the Fat and dried, boyl them in the Wine till somewhat more than a pint be consumed, and then straining it very hard, give it the Horse luke-warm to drink, if you do add unto it a little Cinamon it is not amiss. There be other Farriers which use to dissolve in a pint of Red Wine, four Ounces of the conserve of Sows, and give it the Horse to Drink: but either of the other Medicines are fully sufficient.

C H A P. LXXX.

Of the falling down of a Horses Fundament.

HOrses sometimes, by means of the Disease formerly spoken of, which is the Bloody-flux, and sometimes by a natural weakness in the inward Bowels, coming through the Resolution of the Muscles, serving to draw up the Fundament, will many times have their Fundaments fall down in great length, both to the much pain of the Horse, and great loathsomeness to the beholders. Now the resolution or falling down, may come partly by over-much straining to Dung when a Horse is costive, and partly by over-great moisture, as it happens in young Children: for, than a Horse, no Creature hath a moister Body. Now the signs are apparent, hanging down of the Fundament, and the Cure is this. First, you shall look whether the Fundament be inflamed, that is, whether it be much sweld or no, if it be not inflamed, then you shall annoint it with Oyl of Roses warmed on a Chafing-dish and coals, or for want of such Oyl, you shall wash it with warm Red Wine, but if it be inflamed, then you shall bath it well with a soft sponge, dipt in the decoction of Mallows, Camomill, Linseed, and Fenugreek, and also you shall annoint it well with Oyl of Camomill and Dill mingled together, to assuage the Swelling: and then with a gentle hand, and warm Linnen cloaths, thrust it fair and softly up into his true place; that done, bathe all the Tuel with Red Wine, wherein hath been sodden Acatium, Galls, Achorn Cups, and the paring of Quinces: Then throw upon it either the powder of Bole-Armonick, or of Frankincens, or Sanguis Draconis, Myrrh, Acatium, or such like, and then give him to drink the dry Pills of Pomegranats beaten to powder, either with Wine or warm water, and be sure to keep the Horse very warm, and in his Body neither too soluble or loose, nor too costive or hard bound, but of a mean and soft temper, for the extremity of either is hurtfull.

C H A P. LXXXI.

Of the Bots, Truncheons, and Worms in a Horses Body.

MY Masters, the old antient Farriers, are of opinion, that the Guts of a Horse do breed three sorts of Worms, that is to say, little short Worms with great red Heads, and long small white Tails, which we call Bots: short and thick Worms all of a bigness like a mans Finger, which we call Truncheons, and great long worms as big as a Mans finger, and at the left six inches in length, which we call by the simple name of Worms only.

 Now in mine own Experience, and all other Mens, I find a fourth sort, which is of a middle size, and are red and fiery, with thick, short, sharp Heads, and are called poysonous red Worms, and are of all other most poysonous and dangerous, for they will ascend up even to the throat of the Horse, and will choak and kill him, and sometimes they will eat through his stomach, and so confound him.

Now for mine own part, I am of opinion, that the first which are Bots, are not bred in the Guts but in the Stomach only, because having cut up many Horses, I never could yet find any one Bot in the Guts, yet great store of both the other Worms, nor ever cut up the stomach of a Horse, but I found great abundance of Bots, and neither of the other Worms: whence I am confidently opinionated, that Bots are ever bred in the Stomach, and both the other sorts of Worms in the Guts: Truth it is, that all three do proceed from one self same cause, which is a Raw, Gross, and Flegmatick matter, apt to putrifaction, and ingendred by foul and naughty Feeding; and as they proceed from one self cause, so have they all one Sign, and all one Cure. The signs then are, the Horse will forsake his Meat, and not stand upon his Leggs, but wallow and tumble, and beat his Belly with his feet, and sometimes the pain will be so extreme, that he will beat his Head against the ground, and truly, the Violence of the Red-worms are wonderfull, for I have seen Horses whose stomach have been eaten quite through with them, so that the Meat which they eat, could not abide in their stomach, but fell upon the swallowing into the Body, making the Body swell like a Tun, and so have died with huge torment. Now the Cure according to the antientest Farriers is, to take
a quart

a quart of sweet Milk, of Honey a quarrern, and give it him luke-warm; then walk him up and down for the space of an hour after, and so let him rest for that day, with as little Meat and Drink as may be: and by no means suffer him to lye down. Then the next day when the Horse is fasting, take of Rue a handfull, of Savin as much, and being well stampt, put thereunto a little Brimstone, and a little Soor of a Chimney beaten into fine powder, put all these things together in a quart of wort, or new Ale, and there let them lye in steep the space of an hour or two; then strain it hard through a fair cloath, and give it the Horse to drinke luke-warm, then Bridle him, and walk him abroad the space of an hour, then set him up, and let him stand on the Bit two or three hours after, and then give him a little Hay.

Other ancient Farriers use only to give the Horse for this Disease, the warm Guts of a new slain Hen or Chicken, being thrust down the Horses throat, and sure it is passing good, especially if a little Sale be mixed with them: and this must be done three Mornings together fasting, keeping the Horse from Drinking three or four hours after. Others use to take three Ounces of the Roots of Caphers, beaten with half so much Vinegar, and put it down the Horses throat: or else a pint of Milk, and a spoonfull of Sope given the Horse to drink: or Brimstone and Milk given to drink, all very soveraign. Others use to bind about the Snaffle or bit, mans Dung new made, and so Ride him therewith.

Others take of Gentian, Aloes, and Savin, of each half an Ounce, and brew them together with Honey and strong Ale. Others use to take only a quart of cold sweet Wort. Others take Savin and Souther-wort, or else Worm-wood, and the tops of Broom small chopt, and mix it with the Horses Provender. Others use to give the Horse to drink luke-warm, Elder-berries sodden in Milk. Others use to give the Horse with his Provender, his own Hair chopt small, and mixt with Bay-Salt. Others put hot Embers in Water, and presently strain it, and give it the Horse to drink. Others make little round Balls of Honey, and the fine powder of Chalk, and putting them into Ale, make the Horse swallow them. Others use to take, especially for the long Worms, a half-penny worth of Fenu-greek, of Anniseeds a quarter of a pound, a half-penny worth of Bay-berries, as much Licoras, and as much Turmerick, and a little quantity of Brimstone, bear them into powder, put them into a quart

of Ale, and give it the Horse fasting luke-warm to drink: then Ride him an hour after, then set him up warm four and twenty hours after. Others use, especially for the Truncheons, to take two spoonfull of the powder of Worm-wood, finely sear'd, and put it in a pint of good Malmsey, and after it is brewed a while, let it stand and soak all night, and then give it the Horse in the morning fasting, then keep him without meat or drink four hours after. Others use to give the Horse to drink, two spoonfull of Worm seed, and as much Brimstone, as powder of Savin, with a quart of Malmsey, Ale, or Beer. Others use to take as much black Sope as a Walnut, and as much Brimstone beaten to powder, and a head or two of Garlick pill'd and bruised, and put into a quart of good Ale, and give it the Horse luke-warm to drink.

This Medicine may also be administered to a Mare great with Foal, if she be troubled with the Bets or other Worms, so that the black Sope be left out, for it is a Violent purger, and may kill the Foal in the Mares belly; yet for mine own part, I never give any inward Physical Medicines to a Mare great with Foal, but if I find her troubled with Worms, as is easie to be done by the stinking of her Breath, by the sliminess of her Mouth, and by the greatness of the Worm-veins under her Lips, then presently I do nothing but let her Blood in the Roof or Palate of her Mouth, and make her eat her own Blood; for that I know will both kill wormes, and help most inward Maladies. But leaving Mares with Foal, let us return again unto Horses. There be other Farriers which use to take a handfull of new Hens-dung, and a quart of stale Ale, and bray them well together; then take a handfull of Bay Salt, and put two Eggs to it, and having mixt them all well together, give it the Horse to drink. Others use to take half a penny-worth of Saffron, and as much Allum, and mix them with a pint of Milk, and give it the Horse to drink: or else give him green Willow, and green Reed to eat. Others use (and think it the best of all other Medicines) to take the Guts of a young Hen or Pigeon, and roul it in a litle black Sope, then in Bay Salt, and so force it down the Horses throat. Others use (especially for the Truncheons) to let the Horse drink Hens dung, Mint, Sage, and Rhue, with Beer or Ale, and so let him bleed in the Nostrils. To conclude, except you see the Horse very much pained, you shall need to give him nothing but Rozen and Brimstone mixt

mixt together, and blended with his Provender, having care that you ever give it Fasting, and long before the Horse do Drink.

Lastly, and as the chief of all Medicines for all manner of Worms, take as much Precipitate as will lye on a silver two-pence, and work it with as much Butter as a French Walnut, then lap it in another piece of Butter as big as a Hens egg, and so give it the Horse fasting in the manner of a Pill. Ride him a little after it, and give him no water that Night, and let him fast two hours, then feed as at other times.

C H A P. LXXXII.

Of the pain in a Horses Kidneys.

There is no question, but the same Infirmities which do belong unto the Liver or Spleen of a Horse, do also belong unto the Kidneys, as Inflammations, Obstructions, Aposthumes, and Ulcers; and truly, in opening of Horses, I have found the Kidney sometimes wasted, which I imputed to some matter of inflammation: I have likewise found much Gravel, which was only through Obstructions; and I have seen the Kidneys as black as ink, which could not come without an Ulcerous Apostumation. But forasmuch as a Horse is a Beast, who cannot tell the manner of his pain, nor we so heedfull as we might have been, to observe the Symptom of every grief, we are inforc'd to conclude all under one Name, which is the pain in the Kidneys, gotten either by some great strain in Leading, or by some great burthen Bearing.

The signs are, the Horse will go Roling and Staggering behind, his Urine will be blackish and thick, and his Stones (if he have any) will be shrunk up into his Body; if he have not, you shall perceive the Sheath of his yard to be drawn backward, and the great Vein which runneth up the side of his Thigh, called the Kidney-vein, will slack and beat continually. The Cure, according to the opinion of the Ancient Farriers, is, first to bathe his Back and Loins with Oyl, Wine, and Nitrum, warmed together, and after he is bathed, cover him with warm Cloaths, and let him stand in Litter up to the Belly, then give him to driak water wherein hath been sodden Dill, Fennel, Anniseeds, Smallage, Parsley, Spikenard, Myrrh, and Cassia,

Cassia, or as many as you can conveniently get of these simples. The next Morning fasting, give him to drink a quart of Ews milk, or for want thereof, half so much Saller-Oyl, and Deers suet molten together: or if you can get it, the Root of Daffodill boyled in Wine, and let his Provender be dried Oats; and in his Diet keep him about ten daies, and he will Recover.

C H A P. LXXXIII.

Of the Diseases belonging to the Bladder or Urine, and first of the Strangury.

According to the determinate opinion of all the best and Antientest Horse-Leaches, the Bladder of a Horse is subject to three dangerous Diseases, as first, the Strangury, or Strangullion; the second, the Pain-piss, and the third the Stone, or Pissupprest. Now for the first, which is the Strangury, or Strangullion, it is, when the Horse is provoked to stale often, and avoideth nothing but a few drops; it commeth without doubt, either by the heat and sharpness of Urine, caused either by great Travail, or by sharp and hot Meats and drinks, or else by the Exulceration of the Bladder, or by means of some Aposthume in the Liver and Kidneys, which Aposthume being broken, the matter resorteth down into the Bladder, and with the sharpness thereof causeth a continual provocation of pissing. The signs are (as I said before) a continual desire to piss, yet avoiding nothing but a few drops, and those with such pain, that he will whisk, wry, and beat his Tail as he pisseth,

The Cure whereof is, to bathe the Horses hinder Loins with warm water, and then take Bread and Bay-berries, and temper them together with May Butter, and give him two or three Balls thereof down his throat three daies together.

Others use, (and I have ever found it the best) to take a quart of new Milk, and a quartern of Sugar, and brewing them well together, give it the Horse to drink six Mornings together, observing to keep the Horse from all sharp meats, as Mow burnt Hay, Bran, and such like.

H A P. LXXXIII.

Of the Pain-piss, or Pissing with pain.

THis Disease of Pain-piss, is, when a Horse cannot piss, but with great pain and labour, and doth proceed sometimes from the weakness of the Bladder, and the Cold intemperance thereof; and sometimes through the abundance of Flegm and gross Humours, stopping the neck of the Bladder. The signs whereof are, the Horse will stretch himself out as though he would stale, and thrust out his yard a little, and with the pain clap his Tail betwixt his thighs to his Belly, and having stood so a good while, in the end he will stale a good quantity.

The Cure whereof, according to the opinion of some Farriers, is, to take the juyce of Leeks, sweet Wine, and Oyl, and mingling them together, to pour it into his right Nostril, and walk him a little up and down upon it: or else to give him to drink Smallage seed, or else the Roots of wild Fennel sodden with Wine. Others use to put fine sharp Onions clean pill'd, and a little bruised, into his Fundament, and then to chafe him immediatly upon it, either by Riding him, or Running him in a Mans hand: or else to take the scraping of the inward parts of the Horses own Hoofs, beaten into powder, and mingled with Wine, and pour it into his right Nostril, and then Ride him upon it. Others use to lead the Horse to Sheep-coats, or Sheep-pens, where great store of Sheep are wonted, and making the Horse to smell of the Dung, and Piss of the Sheep, it will provoke him to stale presently. Others use to give the Horse white Dogs dung dried and mingled with Ammoniacum, Salt, and Wine to drink: or else Hogs dung only with Wine, or the dregs of Horse piss and Wine.

C H A P. LXXXV.

Of the Stone, or Pils-suppress in a Horse.

THe Stone, or Pils-suppress in a Horse, is, when a Horse would strain stale, but cannot at all, and therefore may well be called the suppression of the Urine. It proceedeth according to the opinions of my Masters, the old Farriers, sometimes from the weaknes of the Bladder, when the water Conduit is stopped with gross Humours, or with matter descending from the Liver, or from some Inflammation or hard Knobs growing at the mouth of the Conduit, or for that the sinews of the Bladder are numbed, (so as the Bladder is without feeling: or it may come by keeping a Horse in Long Travail, and not suffering him to stale; but most commonly and oftest it cometh from Obstructions in the Kidneys, where, by the causes aforesaid, a certain Red Gravel being bred, and falling down into the Conduits, by mixture of Flegm and other gross Humours, is there brought to be a hard Stone, and stoppeth the passage of the Urine. For the signs there needeth no more but this, that he would strain pils, but cannot.

The Cure, according to the opinion of the most antientest Farriers, is, first to draw out his yard, and bathe it well with white Wine, and pick it, and scour it well, lest it be stopped with dirt and filthines; then put a little Oyl of Camomill into his yard with a wax Candle, and a bruised Clove of Garlick: but if that will not force him to stale, then take of Parsley two handfull, of Coriander one handfull, stamp them and strain them with a quart of white Wine, & dissolve therein one Ounce of Cake Sope, and give it luke-warm unto the horse to drink; and see that you keep him as warm as may be, and let him drink no cold water for the space of five or six dayes, & when you would have him to stale, let it either be on good plenty of straw, or upon the grass, or in a sheep coat. Others (and those of the best esteem for Horse-leach-craft at this day) use only to give white Wine, Cake-sope, and Butter very well mixt together, and let the Horse Drink it warm.

Others use to annoint the Horses belly first with warm water, then when it is dried, to annoint it again with Sallet-Oyl, Hogs-grease and

and Tarr mixt together and made warm, and so hold a hot Iron against his Belly whilst it is annointing, that the Oyntment may the better enter the Skin: But I hold this Medicine to be much better for the Scrangury, or any other pain in the Belly, than for the Stone; yet it is approved good for all. Others use to take a pint of white Wine or Ale, and mix it with a little Garlick, and the whites of ten Eggs, and give it the Horse to drink: or else give him the juyce of red Cole-worts mixt with white wine, or the Root of Alexanders bruised, and sodden in Wine to drink, and wash his yard with Vinegar. Others use to take either Worm-wood, Southern-wood, or Galingale, or Mallows, or Pimpernell, some of these, or any one of those, stamp and strained, and give it the Horse with Ale to drink. Others use to take a pint of white Wine, half a pint of Burr-seed beaten very small, two Ounces of Parsley seed, half a handfull of Hyssop, half an Ounce of black Sope, mix them all well together, and warm it and give it the Horse to drink: or else take un-set Leeks, and stamp them small, and Sope, Milk, and Butter, and being mixt together, give it the Horse to drink. Others use to take a Nutmeg, and a handfull of Parsly-seed, beat them to powder, then take as much Butter, and mix them all together in a quart of strong Ale, and give it the Horse luke-warm to drink: or else take the Seed of Smallage, Parsly, Saxafrace, the Roots of Philupendula, Cherry-stone Kernels, Grummell-seeds, and Broom-seeds, of each a like quantity, beat them into fine powder, and give it the Horse with a pint or a quart of white Wine.

Now albeit, these Medicines before rehearsed, are daily in practice, and approved very sovereign, yet for mine own part, I have found none more sovereign than this: Take a quart of strong Ale, and put it into a pottle pot; then take as many Keen Radish Roots, clean washt, being str through and bruised, as will fill up the pot; then stopping the pot very close that no Air may come in, let it so stand four and twenty hours, then strain the Ale and the Roots very hard into a clean Vessel, and give it the Horse fasting in the Morning to drink: then Ride him a little up and down, and so set him up warm, and watch him, and you shall see him stale. This you must do divers Mornings together.

C H A P. LXXXVI.

Of a Horse that pisseth Blood.

There is nothing more certain, than that a Horse many times will piss Blood instead of Urine, the cause (as the most ancient Farriers suppose) proceeding from some one of these Grounds; either overmuch Labour, or too heavy a Burthen, especially when the Horse is fat: for by either of them the Horse may come to break some vein in his Body, and then you shall see clear Blood come out, and no Urine at all; but if the Blood be mixt with Urine, then they suppose it commeth from the Kidneys, having some ragged Stone therein, which through great Travel doth fret the veins of the Kidneys, and make them bleed, through which as the Urine passeth, it taketh the Blood away with it also; but for my own part, I have not found any greater cause for the pissing of Blood then the taking up of a Horse from Grass in the strength of Winter, (as about Christmas) and presently, without a dayes rest in the Stable, to thrust him into a long and weary Journey: from this cause I have seen many Horses after two or three dayes Journey, to piss Blood in most grievous manner. The signs are needles. The Cure according to the opinion of the ancient Farriers, is this: First, let the Horse bleed in the palat of the mouth, to convert the Blood the contrary way; then take of Tragagant which hath been steeped in white Wine, half an Ounce, of Poppy-seed, one dram and one scruple, and of Storax as much, and twelve pine apple Kernels; let all these things be beaten and mingled well together, and give the Horse thereof every Morning the space of seven dayes; the quantity of a Wall-nut, infused in a quart of sweet Wine. Other latter Farriers use to let the Horse bleed in the Neck, and boyl that Blood with Wheat, and with the powder of dried Pomegranat pills; then strain it, and give it him three or four mornings together to Drink, and let him by no means Travil thereupon: or else give him of husked Beans boyled with husks of Acorns beaten small, and mixe together. Others use to make him a Drink with the Roots of Dafodil mingled with Whe tflower, and Summach sodden long in Water, and so to be given to the Horse with sweet Wine: or else

to make him drink of Goats milk and Sallet-Oyl, straining thereunto a little Frumenty: or else to give him sodden Beans and Deers suet in Wine, each of these are of like force and goodnes. Now there be others which use for this Disease to take Barley, and seeth in the juyce of Gum-folly, and give him the Barly to eat, and the juyce to drink: or else take the powder of Licoras and Anniseeds rouled up in Honey, and make round Balls thereof, and cast down the Horses throat two or three of them: Lastly, and the best, take Licoras, Anniseeds, and Garlick bruised together with Sallet-Oyl and Honey, and give it in a quart of new Milk to the Horse to drink, it is very soveragin also; and these two Medicines last rehearsed, are exceeding good also for any Cold or Glandrs.

C H A P. LXXXVII.

Of the Colt Evil.

THe Colt Evil by the most ancient Farriers, especially the Italians, whose hot Country affordeth the Beasts of more Hot and strong Natures than ours doth, is thought to be a continual standing Erection, together with an unnatural Swelling of the Yard, proceeding either from some wind, filling the Arteries and hollow Sinews, or Pipes of the Yard; or else through the abundance of Seed, provoked by the natural heat of the Horse; but our Farriers, who have not seen that experience, because our Horses are of a Colder temper, say, it is only a Swelling of the sheath of the Yard, and of that part of the Belly about the Yard, together with the Cod also, proceeding from corrupt seed, which commeth out of the Yard, and remaining within the sheath, there putrieth: And this judgment we find by Experience to be most true. Now you shall understand, that Geldings as well as Horses are subject therunto, because they want natural Heat to expell seed any further.

The signs are only the outward Swelling of the Sheath and Cod, & none other: and the best Cure is, first to wash the sheath clean with luke-warm Vinegar, then draw out the yard and wash it also; which done, Ride the Horse twice every day, that is, Morning and Evening, into some deep Running water up to the Belly, tossing him to and fro, to allay the heat of his Members till the swelling be vanished,

and if you swim him now and then, it will not do amiss. Others use to bathe his Cods and Yard with the juyce of House-lick, or with the water wherein Kinholm hath been sod. Now this Colt-evil will sometimes stop the Horses Urine that he cannot piss: then you shall take new Ale, and a little black Sope, and give it the Horse to drink. Others use to wash the Horses Cods and Sheath with Butter and Vinegar made warm. Others use to wash his Yard and Cods with the juyce of Hemlock, or else take Bean-flower, Vinegar, and Bole-Armonick, and mixing them together, lay it Plaisterwise to his Sheath and Cods. Others make him a plaister of wine Lees, House-lick, and Bran mixt together, and laid to his Sheath and Cods: but if the first Receipt will serve, I would not wish you to use any other Medicine,

C H A P. LXXXVIII.

Of the Mattering of the Yard.

THis Disease of the Mattering of the Yard, is seldome seen but amongst the hot Races or Breeds of Horses, as the Jennet, the Barbary, and such like; and it happeneth ever at Covering time, when the Horse and Mare both being too hot, do burn themselves, by which means there issueth forth of the Horses yard much filthy matter: The signs are the falling down of the matter, and a swelling at the end of the Yard, and the Horse can by no means draw up his yard, or cover it within his sheath. The Cure is, to take a pint of white-Wine, and boyl therein a quartern of Roch-allom, and with a large Serringe or squirt, squirt in three or four squirtsfall into his yard one after another, and be sure that your squirt go home unto the bottom, that the Liquor or Lotion may scoure the Bloody matter away: this do five or six times every day till the Horse be whole.

C H A P. LXXXIX.

Of the shedding of the Seed.

THe shedding of the Seed, or the falling away of the Sperm in Horses, is none other than that which we call in men the Running of the Reins: it commeth, as our old Farriers say, either by abundance, and rankness of Seed, or by the weakness of the Stones, and Seed-Vessels, not able to retain the Seed untill it be digested and thickned; but truly for mine own part, I think it commeth ofner (especially amongst our English Horses) by some great strain in Leaping, or by teaching a Horse to Bound, and making him bound above the compass of his Natural strength. The signs are only the shedding of his Seed, which will be White, Thin, and Watrish. The Cure, according to the antient Experiments, is, first to Ride the Horse into some cold water up to the Belly, in somuch that his Stones may be covered with water; which done, bathe his Fundament with Water and Oyl, then cover him exceeding warm, and give him every day to drink Red Wine, and Hoggs Dung, till the Flux of his seed stay; but latter Experience hath found this Receipt better. Take of Red Wine a quart, and put therein a little Acatium, the juyce of Plantain, and a little Mastick, and give it him to drink; and then bathe all his Back with Red Wine, and Oyl of Roses mixt together; but other Farriers take Venice, Turpentine, and being washt, beat it well with half so much Sugar, and then make round Balls as big as walnuts, and give the Horse five every Morning till the flux stay.

C H A P. XC.

Of the falling down of the Yard.

THe falling down of the Yard, is when a Horse hath no strength to draw up his Yard within the sheath, but lets it hang down between his Leggs ill-favouredly: it commeth (as our best Farriers suppose) either through the weakness of the Member, by means of some Resolution in the Muscles and Sinews, serving the same, caused by some great strain or stripe on the Back; or else through extreme

Weariness and Tying. The sign is only the apparent hanging down of the Member: and the Cure is, (according to some opinions) to wash the Horses yard in Salt water from the Sea, or for want thereof, with Water and Salt; but if that will not prevail, then prick all the outmost skin of his yard with a sharp Needle, but yet as slightly as may be, and not deep: and then wash all the pricks with strong Vinegar, and this will not only make him draw up his yard again, but also if at any time his Fundament chance to fall, this Cure will put it up again. There be other Farriers which for this Disease will put into the pipe of the Horses yard, Honey and Salt boyled together, and made Liquid, or else a quick flye, or a grain of Frankincense, or a Clove of Garlick clean pill'd and bruised, and bathe his Back with Oyl, Wine, and Nitre made warm and mingled together.

But the best Cure, according to our English practice, is, first, to wash all the yard with white-Wine warmed, and then annoint it with Oyl of Roses and Honey mixt together, and so put it up into the sheath, and with a little Bolster of Canvas keep it from falling down, and dress him thus once in four and twenty hours, until he be recovered, and in any Case let his Back be kept as warm as is possible, both with Cloath and a charge of Plaster made of Bole-Armornick, Eggs, Wheat flower, Sanguis Draconis, Turpentine, and Vinegar; or else lay next his Back a wet-Sack, or wet lay, and a dry Cloth over it, and that will keep his Back exceeding warm.

C H A P. XCI.

Of the Diseases incident to Mares, and first of the Barrenness of the Womb.

THe only Disease incident to the Womb of a Mare, (as far forth as our Farriers are Experienced) is Barrenness which may proceed from divers causes, as through the untemperateness of the Matrix, being either too hot and fiery, or too cold and moist, or too dry; or else too short, or too narrow, or having the Neck thereof turned awry, or by means of some Obstruction, or Stopping in the Matrix, or in that the Mare is too fat or too lean, and divers other such like causes. Now the Cure thereof, according to the old Farriers, is, to take a good handfull of Leeks, and stamp them in mortar with four or five spoon-fuls

fals of Wine, then put thereunto twelve flies, called Cantharides, then strain them all together with a sufficient quantity of water to serve the Mare therewith two days together, by pouring the same into her Nature with a Clister-pipe made for the purpose, and at the end of three dayes next following, offer the horse unto her that should cover her, and after she is covered, wash her Nature twice together with Cold water.

There be others which use to take of Nitrum, of Sparrows Dung, & of Turpenine, of each a like quantity well wrought together, and make a Suppository, and put that into her Nature, and it will cause her both to desire the Horse, and also to conceive. There be some of opinion, that it is good to put a Nettle into the Horses mouth that should cover her. Of all which, let only Experience be your warrant.

C H A P. XCII.

Of the Pestilent Consumption in Mares.

There is a certain Pestilent Consumption incident to Mares when they are with Foal, proceeding from cold Flegm, gathered by raw foggy Food in the Winter-season, which descending from the Kidneys, doth oppresse the Matrix, and makes the Mare consume and pine away, so that, if she be not holpen, she will want strength to Feal her Foal. The signs are, suddain Leanness, and a drooping of Spirit, with much dislike of Meate, a continual desire to be laid. The Cure is, to pour into her Nostrils three pints of Fish brine, called Garume, three or four Mornings together, and if the grief be very great, then take five pints, and it will make her vent all Flegm at her Nostrils.

C H A P. XCIII.

Of the rage of Love in Mares.

It is reported by some of our English Farriers, that Mares being proudly and high kept, will at the Spring of the year, when their Blood begins to wax warm, if they chance, when they go to the water,

water, to see their own shadows therein, that presently they will fall into an extreme Love therewith, and from that Love into such a hot Rage, that they will forget either to Eat or drink, and never cease Running about the pasture, gazing strangely, and looking oft about and behind them. The Cure of this Folly, is, presently to lead the Mare to the Water, and there to let her see her self as before, and the second sight will utterly extinguish the memory of the first, and so take away her Folly.

C H A P. XCIV.

Of Mares which cast their Foals.

THe occasion why Mares cast their Foals, that is, to Foal them either before their times, or dead, are very many, as strains, strokes, intemperate Riding, rushings, hard Wintrings, or too great Fatness, and such like. Now you shall understand, that this abortive-ment, or untimely casting of a Foal, is most dangerous to the Life of a Mare: For nature being, as it were, detained from her true and perfect custom, which is the preservation of Health, cannot chuse but give way to the contrary, which is Death and Mortality, and the Body and Pores being set open to the air, before it be able to defend the Cold, cannot choose but be suffocated with unwholesome Vapours. If therefore you have a Mare at any time which doth cast her Foal, and withall falleth sick upon the same, you shall presently take her into the House, and set her up very warm, then give her two spoonfull of the powder of Diapente well brewd in a pint of Muskadine, and feed her with sweet Hay, and warm Mashcs, for at least a week after.

C H A P. XCV.

Of Mares that are hard of Foaling.

IF it happen by any mischance, or otherwise, that the passages or other conduits, which lead from the Matrix, be so straightened that the Mare cannot Foal, and so be in danger of her Life: then it shall be good that you help her by holding and stopping her Nostriils with

with your hand in a gentle manner, that her Breach may not have passage, and she will Foal with a great deal the more ease, and much sooner; and sure the pain is nothing, because a Mare always Foaleth standing. Now if at any time when your Mare hath Foaled, she cannot void her Secundine, which is the skin wherein the Foal is wrapped, in that natural manner as she ought, you shall then take a good handfull or two of Fennel, and boyl it in water: then take half a pint of that, and another half pint of old Wine, and put thereto a fourth part of Oyl, and mingle them all together over the fire, and being but luke warm, pour it into the Mares Nostils, and hold her Nostils close with your hand, to keep it in a pretty while after, and no question but she will void her Secundine presently.

C H A P. XCVI.

Of making a Mare to cast her Foal.

IF at any time you would have your Mare to cast her Foal, as having present occasion to use her, or in that the Foal is not worthily enough begot, you shall take a bottle of new Milk, and two handfulls of Savin chopt and bruised, and putting them together, boyl them till one half be consumed; then strain it very hard, and give it the Mare luke-warm to drink, then presently Gallop her a good space, then set her up, do thus two Mornings, and before the third she will have cast her Foal. Others use with their hand to kill the Foal in the Mares belly, but it is dangerous, and the former Medicine is more sufficient. And thus much of the infirmities of Mares. Now let us return again to Horses and Mares in general.

C H A P. XCVII.

Of the Drinking of Horse-leaches by Horses.

IF a Horse at any time drink down Horse-leaches, they will suck his Blood and Kill him. The signs are, the Horse will hang down his head to the ground, and abundance of filthy flaver will fall from his mouth, and sometimes some Blood also. The Cure is, presently to give him a pint of Sallet-Oyl to drink, and that will

make them fall away, and kill them. But the best is, to give him half an Ounce of Diapente brewed in a pint of good strong Beer or Ale.

C H A P. XCVIII.

Of Swallowing down Hens dung, or any Venemous thing whatsoever.

IF a Horse chance to swallow down any Hens-dung with his Hay, it will fret his Guts, and make him to avoid much filthy matter at his Fundament. The Cure whereof, is, to take a pint of Wine, half a pint of Honey, and two spoonfulls of Smallage seed bruised, and mixing them well together, to give it the Horse to drink, and then to Walk him well upon the same that he may empty his Belly. But if the Horse chance to lick up any other Venemous thing, as Neut, or such lick, which you shall know by the instant swelling of his body, and the trembling of all his members; then the Cure is, first to put him into a sweat, either by Cloaths or Exercise; then to let him blood in the Palate of the mouth, and look how much he bleedeth, so much let him swallow down hot: or else give him strong Wine and Salt mixt together: or else take the Root, and Leaves, and fruit of Briony, which being burnt to ashes, give the Horse a good spoonfull thereof, with a pint of sweet Wine to drink.

Now for mine own part, I have ever used to take a pint of Saller-Oyl, and two spoonfull of Sugar-Candy beaten to powder, and as much of the powder Diapente, and brewing them together, give it the Horse to drink: or for want of Diapente, so much of the shaving either of Ivory, or an old Stags horn, especially the tips thereof burnt.

C H A P. XCIX.

Of purging Medicines in general, and first of the Suppository.

Purging is said of our most antient Farriers, to be an emptying and discharging of all and every superfluous humors which disorder the body with their evil qualities: For such humors breed evil nutriment, which, when it will not be corrected nor holpen with good

good Diet, alteration, nor the benefit of nature and kindly heat, then must it by force either be taken away by Purgation, Clister, or Suppository. Now for as much as a Horse is troubled with many Diseases in the Guts, and that nothing can purge the gut with that gentleness which a Suppository doth, I will here first begin to speak of Suppositories.

Understand then, that a Horse being surfeited, and full of evil humours needing to be purged, it is best first to give him a Suppository, least if you should come to apply a Clister, the great Gut being stopped with dry, hard, and hot excrements, the Medicine being not able to work beyond it, lose both labour and vertue; so that I make account a Suppository is but onely a preparative to a Glister, and but onely to cleanse and make loose the great Gut, which commeth to the tuell. The gentle Suppository then, and that which purgeth Flegm in the best manner, is, to take a square piece of cake sope, or white new Castle sope, about five or six inches long, and shaving it round till it be not above three inches about in the midst, and a little smaller at each end than in the midst: then annoint it over with Sallet-Oyl, and so with your hand thrust it up more than a full span into his Fundament: then suddenly clap his tayl to his tuell, and hold it hard and close more than half an hour, in which space the most part of the Suppository will be wasted, then gently take away your hand, and let him void the Suppository at his pleasure. The next Suppository to this, and which purgeth Choler abundantly, is, to take Savin stamp small, Staves aker and salt, and boyl them in Honey till it be thick, then rake and knead it, and roul it of a pretty thick long roul, as before you were taught for the hard sope, and minister it at histuell. The next to this, and that which purgeth Melancholy, is, to take a keen Onion, and pilling off the skin, jag it a little cross-wise with your knife, and so thrust it up into the Horses Fundament. There is, besides these Suppositories, one other Suppository which is, to take a quart of Honey, and boyl it on the fire till it come to be thick like a Salve, then powr it forth upon a Table, and knead it like a piece of dough: then when it begins to harden, or grow stiff, (as it will do when it begins to cool) then roul it up under your hand, and make it in the form of a Suppository, as is before shewed, & administer it in the same manner. This Suppository is good to purge the gut of any fowl Humour, and therewithall is comfortable to the body.

Now you must also understand, that as these Suppositories are preparative before Glisters, so they are likewise to be used simply of themselves, where the sickness of the Horse carrieth no great danger: For upon every slight occasion, or small driness, which is to be dissolved with the most gentle Medicine, to administer a Glisters, were to bring the Horses body to such an intemperate looseness, as would prove much worse than the former contrary driness. Therefore I wish every carefull Farrier (because the body of a Horse would not be tampered withall too much by physick) first, in the case of costiveness, or inflammation of the inward parts, to approve a Suppository: as namely, the first prescribed and naked like a mans fist, or else like a roul or quantity of Roch-Allome, or else four inches of a great tallow Candle or Percher of four in the pound; which if it work effectually, and keep the Horses body soluble, then to proceed no further; but in case it do not, but that the offensive matter still breedeth and encreaseth, then to administer a Glisters; and where that faileth to take away the offence, to administer a Purgation. Now by the way, you are to take with you this general rule, and never to fail in the performance, which is, never to administer either Suppository or Glisters, but first immediately before you give it, to Rake your Horse, which Raking, is in this manner. First, you shall annoint all your hand and arm over either with Saller Oyl, sweet Butter, or fresh Grease, and then thrust it into the Horses Fundament, and draw out all the Dung, Flegm, and filthy matter that you can feel, even as high up as the great bag: Which done, then either administer your Suppository or Glisters, which you please, at your leisure; and in any case, whilst the Horse is thus in Physick, keep him exceeding warm.

CHAP. C.

Of Glisters, and their Uses.

THe natures and properties of Glisters are divers, and therefore it is necessary that every carefull Farrier learn to know to what end they serve, and of what Drugs or Simples they ought to be compounded: For every Glisters is to be made according to the Disease. Now of Glisters, some are to ease griefs, and to allay the sharpness of the

the Humours; some to bind, some to loosen, and some to purge, and some to heal Ulcers. These Glisters by cleansing the Guts, refresh the vital parts, and prepare the way before for every inward and strong Purgation. Therefore, whensoever a Horse, through grossness of Humours, corruption of Blood, or abundance of Flegm, Choler, or Melancholy, is brought unto that evil habit of body, that of necessity he must be purged, and that especially his pain is in his Guts and Body, you shall then, as before I said (having made a probation of a Suppository) first of all administer a Glisten, lest by Purging suddenly with any Purgation or Potion, you stir up a multitude of evil humours, which finding no passage downward (because the Guts being stopped with Wind and Dregs) do strike upward, and so perhaps put the Horse into much greater danger.

Now for the composition of Glisters, you shall understand, that they be made of four things; that is, of Decoctions, of Druggs, of Oyl, or such like unctuous matter, as Butter, or soft Grease, and fourthly of divers Salts, to provoke the vertue Expulsive. A Decoction is the broath of certain Herbs and Siraples boyled together in water, untill the third part be consumed. Now sometimes for want of such Decoctions, you may if you please, use some fat Beef-broth, or the broath of a Sheeps head, or such like, or Milk, or Whay, or some such like liquor, mingled sometimes either with Honey, or with Sugar, according to the quality of the Disease; the Glisten being either Lensitive, that is to say, easing of pain: or Glutinative, which is, joyning of things together: or else Absterfive, which is, wiping away, or cleansing of filthy matter. Now of this Decoction, or Broath, being very clean strained, you shall never take above three pints at the most, and many times but a quart; into which you shall put such Druggs as are needfull, exceeding not at the most, above three or four ounces, according as the Simples be more or less violent: of the Oyl you shall never use in a Glisten above half a pint, and of Salt not above three or foure Drams. You shall also continually administer your Glisten luke-warm, either with some long Horn, or a large Glisten pipe made for the purpose, and fixed to the largest bladder you can get; and this Glisten-pipe is of all the best, and doth least lose labour. When you do administer a Glisten, you shall set the Horses hinder parts somewhat higher then the foreparts, and then you shall put the Glisten-pipe in at his Tuel into his Funda-

Fundament up to the head, and having the confection within the Bladder, wring it with a very good strength into his body. A Glisters would be administered to a horse when he is rather empty than full paunched, whether it be in the fore noon or after-noon. Now for the retaining or holding of the Glisters in the Horses body, three quarters of an hour is sufficient, of what quality soever it be. Now you are to note by the way, that as soon as the Glisters is administered unto the Horses body, you must draw out the Pipe with all the gentleness that may be, and suddenly clap his tayl to his Tuel, and so hold it with your hand, without any moving or stirring of the Horse, till the Medicine hath his full time of working.

Now to come unto particular Glisters, that you may know which Glisters it for which purpose; the first is, take of the pulp of Colocynthis, half an ounce, of Dragantium three quarters of an ounce, of Centuary and of Worm-wood, of each half a handfull, of Castoreum a quarter of an ounce, boyl them in three pints of water, then being strained you shall dissolve therein of Gerologundinum three ounces, of Salt three quarters of an Ounce, and of Oyl Olive half a pint, and so luke-warm administer it Glisters-wise, as hath been before expressed: this Glisters is exceeding Sovereign for the Pestilence in Horses, or for any Fever of what nature soever.

The next is, to take the Decoction of Mallows, and to mix therewithall, either fresh Butter, or Sallet Oyl, and so luke-warm administer it: this is of all Glisters the most gentlest, and as the former Glisters is absterfive or cleansing, so this is lenitive and a great easer of pain; it is most Sovereign for a Horse that is taken, or that hath any contraction or Convulsion, and generally for any Costiveness in a Horse whatsoever, proceeding from inward surfeit or sickness, as from the surfeit by Provender, foundring in the body, and such like. The next is, to take of Salt water, or clean Brine a quart, and dissolve therein a pretty quantity of Sope, and then luke-warm administer it: this Glisters is very good for the Cholick, or any other sickness of the Guts or Belly. And thus from these three Glisters you may compound many Glisters; but in mine opinion, if you use no more than them onely, they will be fully sufficient.

C H A P. C I.

Of Purgations, and their Uses.

THe Purging of Horses is ever by one of these two wayes, either by Pills, or by Potion: Pills are any solid and substantial stuff fixed together in one body, and being made into round balls, are cast down the Horses Throat. And a Potion is, when you give the Horse any liquid Purging matter to drink, whether it be Purging Powders dissolved in Wine or Ale, or that it be any other liquid stuff. Now for Pills, they onely Purge and make clean the Head and Brain, bringing Flegm and other gross Humours down into the Excrements: And Potions cleanse the Stomach, Guts, and every other inward Member. Now the Art of the true carefull Farrier is, in chusing of the Simples, whereof these Pills or Potions are to be compounded, and in aptly, or artificially applying the same. First then, it is needfull that every good Farrier (before he go about to Purge his Horse) know with what ill humour a Horse is oppress'd, as whether it proceed from Choler, Flegm, or Melancholy, and where the humours do most abound; and then what Simples are best to Purge those humours, and with what property, quality, and temperament they be indued; for some Simples are most Violent, and next couzens to strong Poysons, as Scamony, or Coloquintida: some again are gentle, and rather nourishing than Medicinal, as Manna, Cassia, Whay, Prunes, and such like: and some are neither too violent, nor too gentle, but of a mean, as Rubarb, Agarick, Sene, and Aloes. Now the antient Farriers did use to Purge their Horses with the pulp of Coloquintida, sometimes with the Roots of wild Cowcubbers, and sometimes with the Broath of a sodden Whelp mixt with Nitrum, and such like, but at this day they are not of our practice, and therefore I wish him, that for his experience, still to make a tryal of strong Medicines, or know the working of every simple, (which is a most praise worthy Ambition,) first to make his proofs upon Jades, whose loss he respecteth not, and so by that working to adventure on better Horses.

But to return to my purpose, the Farrier who goeth about to Purge a Horse by Purgation, must consider the nature of the Horses Disease,

Disease, and the strength of the Horse, and with them joyn the nature, strength, and quantity of the Medicine: he must also consider the Climate under which the Horse is bred, the time of the Disease, the time of the Year, and the time of the Day. For as the Diseases and the Humours which cause the Disease, are sundry, so they must be avoided by sundry Medicines, sundry wayes compounded, according as experience from a continual practice shall instruct you: wherein you are to observe and note, that weak, delicate, and tender Horses are not to be purged with that Violence, which strong, stubborn, and sturdy Horses are, and therefore in such cases, the quality and quantity is to be looked unto of every Simple. The Climate is to be respected, as whether it be hot or cold; and the time of the Disease: For some Diseases must be purged at the beginning, as Fevers, Pestilence, Yellows, Staggers, and all Violent inward Diseases, and some not till the water be thoroughly digested, as Colds, Strangles, and Apostumations. Now albeit the sickness proceeds from cold Humours, yet you must not administer as hot Simples in Summer as in Winter; nor in the contrary case, so cold things in Winter as in Summer, whereby you see the time and the season of the year is to be respected. Then touching respect of the day, you are to observe, that day to be best that is most temperate, fith too much heat maketh a Horse faint, and too much cold doth hinder the Medicine from working. A little regard is to be had in the Wind and Weather; for a moist day with a South-Wind, is to be preferred before a North-wind with a dry day. Now the best hour of receiving any kind of Potion, is ever in the morning, after he hath fasted from meat and drink all the night before. As soon as your Horse hath received any Pill or Potion, let him be walked or gently Ridden up and down one hour at the least, and then set up, and suffered to stand on the Bit two hours after, well littered and cloathed, and stopp'd; but if you perceive that he beginneth to grow sick or ill (as in it commonly Horses will) then you shall suffer him to lye down, and as soon as his sickness is past, you shall offer him to drink a Mash of Malt and water luke-warm: from any other meat keep him fasting till his Medicine have done working.

Now to come to particular receipts and Medicines themselves, you shall easily understand, that although the antient Farriers do make
but

but two kinds, that is to say, Pills and Purgations, yet I divide them into three, that is to say, Scourings, Pills, and Purgations. Scourings are those wholesome, natural, and gentle purging Medicines, which stirring up no great Flux of humours, do only keep the body clean from such evils as would arise and grow, being every way as wholesome in health as in sickness, and may most properly be termed Preparatives, or preparers of the body to entertain more stronger Medicines. To speak then first of the most gentlest and natural scouring, it is onely Grass being given to a Horse only fifteen dayes together, and no more, for after that it fatteth and not scoureth. Next unto Grass is Sorrage, which is only the blades of green Corn, as Wheat, Rye, Barley, and such like, being given seven dayes and no more. Next is green Thistles, being cut up, and given the Horse to eat the space of five dayes and to more. And the last of this nature is the Mash, made in this manner: take a peck of ground Malt, and put it into a Pail, then take a Gallon and a half of Water boyling hot from the fire, and put it into the Malt, then with a staff, mash and stir them together at least half an hour, till tasting the Water you feel it as sweet as Honey, then being lukewarm, give it the Horse to drink. All these scourings do only but cleanse the Guts, and cool the Body, adding comforts to the spirits, and ingendring strength, only the Mash is to be used after labour, or instead of drink in the time of any great sickness. Scourings of a little stronger nature are these: first, when you give your Horse any Provender, to mix with half a peck of Oats, a handfull or two of clean drest Hemp-seed: or else to take a good quantity of Box-Tree Leaves, and put them into a Pewter dish, then set them before the fire, and let them dry leasurly till they be so hard that you may crush them into powder, then take as much of the powder of Brimstone as there is powder of Box, and mix them together, and amongst half a Peck of Oats mix a handfull of this powder, and give it the Horse to eat; both these Scourings are to be used after labour, especially when the Horse hath sweat much.

These two Scourings work upon no matter, but what nature is willing to expel; they Purge the Stomach, Head, and Intrails, they kill all kind of Worms, and dry up Flegm. Scourings of the strongest nature are to take of Sallet Oyl half a pint, and of new Milk from the Cow a pint, brew it together, and give it the Horse luke-

T

warm:

warm: or else take a pint of Muskadine, and half a pint of Sallet Oyl, and being mixt together, give it the Horse to drink: Or else half a pint of Oyl, and a pint of Sack mixt together, and given the Horse to drink luke-warm.

These scourings cleanse the Head, Body, and Guts of all Flegm or molten Grease, which any violent labour hath dissolved: they are exceeding good for any manner of cold, or stoppings in the Wind-pipes, and if you add unto them good store of Sugar-Candy, it will preserve and keep the Horse from sickness. Now for Pills, you shall very plainly understand, that the first and easiest are these, either to take twenty Cloves of Garlick clean pild and bruised, then a quarter of a pound of sweet Butter, and so roul up the Garlick in four or five balls or Pellets, as big as two Walnuts a piece; and so taking out the Horses tongue, thrust them down his Throat one after another: or else to take a quarter of a pound of Butter, and as much red Saunders; beat them well together in a mortar, and then make it into four or five balls, and put them down the Horses Throat. Pills of some-what strong nature, are to take a handfull of Rosemary leaves, and chopping them small, mix them with a quarter of a pound of sweet Butter, and then making it into round balls, give them unto the Horse: Or else take round pieces of raw Melons, and thrust them down the Horses Throat: Or else to take five Green Figs, and put them down the Horses Throat.

 The strongest Pill is this: take of Lard two pound, laid in water two hours, then take nothing but a quarter of a pound of the clean fat thereof, and stamp it in a Mortar, and thereto put of Liquorish, of Anniseeds, and of Fenugreek, of each beaten into powder one Ounce and a half, of Aloes likewise in powder one Ounce, of Agarick half an ounce, knead all these together like a Paste, and make thereof four or five balls, and give it the Horse. The last recited Pill is singular good for the dry Cough, and all the other Pills are most Sovereign for all infirmities of the head, which grow either from Flegm, Melancholy, or any other cold or moist cause whatsoever. Now for Purgations, which are the strongest cleansers of the body, they be these: take two Ounces of Myrrh, and mix it with a pint of Wine, and it will purge all sickness which proceedeth of Cholera: the signs whereof are, his belly will swell, be very hot, and he can neither dung nor break wind: Take a pint of Wine and Beat a raw Egg therein

therein, and add to it a quarter of an ounce of Brimstone, and half an Ounce of Myrrh beaten to powder, and give it the Horse luke-warm, and it will purge all inward Diseases proceeding of Meancholy. Two Spoonfuls of the powder Diapente, given with half a pint of Swines greafe, purgeth all Diseases proceeding of Flegm. Take as much black Sope as a Walnut, a quart of new milk, and a quarter of a pint of Saller-Oyl, and give it the Horse luke-warm, and it purgeth all cold infirmities, but maketh the Horse exceeding sick. Take the Guts of a Tench or Barbel, being cut into litle small pieces, and give it the Horse in a quart of white Wine, and it will purge the Horse from all Costiveness or pain in the Guts. Rye being boyled, so that it burst not, then dried again, and given the Horse instead of Provender, purgeth and killeth all manner of Worms. Take of Radish roots one ounce, of the root called Panax, and of Scamony, of each half an ounce, beat all these together, and boyl them in a quart of Honey, then give the Horse two spoonfuls of this in a quart of Ale luke-warm to Drink, and it will purge all gross Humors, from whence proceedeth either the falling evil, or any Disease of the brain.

Take and boyl Elicampane-roots in milk till they be soft, that you may bruise them to pap, and then adding thereto half a pint of Saller-Oyl, give it the Horse to drink luke-warm, and this will purge and cleanse any kind of Glaunders. Take of sweet Sope a quarter of a pound, and make it into three balls, and give them to the horse, and it will purge, all evil humours whatsoever, both violently, and most abundantly.

C H A P. CII.

A most excellent rare scouring for any horse, sick or sound, and especially for running or hunting horses, whose greafe must necessarily be molten.

FORasmuch as the greatest Art which doth belong to the keeper either of running or hunting Horses, consisteth in the taking away from the Horse his gross glut and fat, which not only offendeth the vital parts, but also stoppeth up the conduits and Vessels of wind, and that it cannot any way be done, but by scouring after exercise; you shall understand, that the best of all scourings, which hath hitherto been approved, is this, which I will here set down:

You shall take twenty Raisins of the Sun, and pick out the stones, and ten figgs, which you shall slit in the midst round-wise, boyl them in a pottle of running water till the water be consumed, and thickned: then take the powder of Licoras, Anniseeds, and Sugar-candy finely searst, and mix it with the Raisins and Figgs, stamping and working them together till it be brought to a stiff paste, then making round balls thereof of a pretty bigness, roul and cover them all over with sweet Butter, and give so many of them unto the horse as you shall think meet for his strength; provided that the day before, you must give your Horse such exercise as will be sure to melt his grease, and that immediately before you give him this Medicine, you also warm him thoroughly, that the humors being again stirred up, the Medicine may work more effectually.

CHAP. CIII.

Of Neezing or Fumigation, and the Use thereof.

THere is yet also another manner of Purgihg of a Horse, and especially his Head, and that is, by forcing him to neeze or snort violently at his Nose, casting forth all filthy and gross matter, which otherwise will offend and oppres the brain; and this neezing is wrought sometimes by fumes or smoaks, sometimes by Powders, and sometimes by Oyls, the sharpness of which, tickling the tender and quick parts of the Head, do compell this snorting and neezing: Surely there is no Purgation more wholesome, for as it cleanseth and separateth gross matter, so it comforteth and maketh strong the Brain. Now to come unto particular medicines which do procure this neezing, they be these: squirt into a Horses Nostrils either Mans Urine which is old, or the Urine of an Ox which hath had much rest, and it will force a Horse to neeze, and is most wholesome for any Quotidian Fever. Take the powder of Gamdragant, Eufens, and Damask Roses well mixt together, and blow it with a Quill into the Horses Nostrils, and it is good either against the Fever in Summer or Winter. Take warm Vinegar and squirt it into his Nostrils, and it is comfortable against the Fever which cometh by raw Digestion. Take Garlick stalks a handfull, being broke into little pieces, and a good quantity of Frankincense, and being put upon a Chafing-dish

dith and Coals, hold the Chafing-dish under the Horses Nostrils, so that the fume may ascend up into his head: and this is most excellent against the Head-ach. Take feathers and Brimstone, and burn them on a Chafing-dish and Coals under the Horses Nose: or blow Pepper and Perithre beaten to Powder up into his Nostrils, either of both these are most excellent against the sleeping evil. Take the powder of Mother-wort, and blow it up into a Horses Nostrils, and it is good against the falling evil. Take two Goose feathers anoynted over with Oyl de Bay, and thrust them up and down in the Horses Nostrils: or else take Sage, Penyrial, and Wheat, Long sodden together, and put into a Bag as hot as may be, which Bag would be so close fastned to the Horses head, that all the smoak and flavour thereof may ascend up into his Nostrils: Or take a Clout anoynted with Sope or Oyl de Bay, and rub it up and down his Nostrils as high as may be. Any of all these, or all these together are most excellent against any cold, poze, or other obstructions in the head. Take Orpiment and Sulphur, and burn them on the Coals and hold it under the Horses Nose: or take Oyl de Bay, Euforbium and white Ellebore, and anointing two feathers therewith, thrust them up into the Horses Nostrils: both these are good against the Glanders.

Take of the stalks of Briony, or wild Vine, two handfulls, and bruise them betwixt two stones, and being so bruised, put them into a linnen bag, and fasten the Bag so to the Horses Head, that the sent may go up into his Nostrils without touching the herb with his mouth: and this is excellent against the mourning of the Chine, or any inward cough. Take of Rosemary, of Nard, and of Sage, dried and beaten into fine Powder, of each a like weight, and with a Quil blow them up into the horses Nostrils: or take the powder of white Pepper, or of Salt Niter, or of Iris Ilirica, or black Eleboris, and blow them with a Quil up into the Horses Nostrils: or take Linnen chopt, dipt in the Dregs of Oyl, and setting it on fire, then suddenly put it out again, and let the smoak ascend up into the Horses Nostrils: or squirt into his Nostrils Aristolochia, mixt with Wine, or Salt Niter mixt with water, or Salt and Roch Allom mixt with Wine: or take ground Ivy beaten small, and thrust up into his Nose: or Bayberries beaten small, and burnt on the Coals under the Horses Nose: or a Coal of fire put into a lump of wet Hay, making a smothering smoak, and

and held under the Horses Nose. Any of these are most excellent against any Disease of the head, especially Staggers, Colds, Glaunders, Strangle, and such like.

Yet all these have their several imperfections: the best Fumes then of all others whatsoever, is, to take the best Olibanum, Storax, and Benjamine, and bruising them grossly together, burn them under the Horses Nose.

C H A P. CIV.

Of Frictions and Bathes, and of their several Uses.

FRictions or Bathes, are a certain rubbing, annointing, or bathing of a Horses Body all over, especially against the hair, because the Medicine may sink in so much the better, with comfortable and Soveragin Unguents, whose vertues do loosen the skin, chear up the inward spirits, and spread a lively heat and feeling over the whole body: And of Frictions, both according to the opinion of the old Farriers and also of the best of this present age, these are the most Soveraign. Take of Damask Roses one pound, of old Oyl a pint, of strong Vinegar a pint and an half, of Mint and Rue, beaten into powder, of each one ounce and a half, together with one old dry Nut, beat them, and mingle them well together: Then being strained and made luke-warm, if it be in the Summer time, and that the Sun shine hot, take the Horse abroad: But if otherwise, keep him in the Stable, and heating a bar of Iron exceeding hot, hold it over, and on each side the Horse, and with the Oyntment rub and chafe the Horse all over against the hair, untill the horse begin to sweat; then Cloath the Horse very warm, and let him stand. This Friction is excellent against all Winter Fevers, or any inward sickness that commeth of Cold. Take of black Elleborus two or three handfulls, and boyl it in a sufficient quantity of strong Vinegar, and with that rub and chafe all the Horses Head and Body quite over once or twice a day, and it is most excellent against Frenzie, Madnes, or any Dryness, or Scaliness of the skin.

Take Oyl de Bay, or Dialhea, and anoynt all the Horses Body all over therewith, holding a Pan of Coals, or a hot bar of Iron near the Oyntment, to make it sink in; or else make him a Bathe of Running

Running water, wherein is boyled Rue, Wormwood, Sage, Juniper, Bay-leaves, and Hylop, and bathe all his body therewith: Either of these are most Sovereign for the mourning of the Chine, or any Disease of the Liver, Lungs, or Spleen. Take Wine and Oyl, and having mixt them together, chafe, and rub the Horses body therewith, and it is most Sovereign for any inward sickness, especially the Liver. To bathe a Horse in Salt water is very wholesome, both for the Horses skin, and also for any Disease in the stomach.

Lastly, take of Mallows, of Sage, of each two or three handfulls, and a Rose-cake, boyl them together in water, then being boyled till the water be all consumed, add a good quantity of Butter, or Saller Oyl, and mixing them together, bathe all the Horses four Leggs therewith, and all the parts of his Body also: and there is nothing more Sovereign for a Horse that hath been tyred or over travelled. To let blood, and with that Blood, and Oyl, and Vinegar, presently to anoynt his Body, helps most sorts of infirmities.

CHAP. CV.

General Drenches or Medicines for all the inward Diseases or surfelts in Horses.

There is no Medicine more Sovereign for all Diseases which breed in a Horses body, then to take half an ounce of the Powder called Diapente, and brew it either with a pint of Sack, if it be for Colds, or Muskadine, if it be for heart sicknesses, and so give it the horse to drink fasting in the morning: and do this at least three mornings together, especially when the horse beginneth first to droop. The next to this, is, to take of Selladine two handfulls, both Root and Leaves, chop them and bruise them: then take of Rue as much, of red Sage and Mint as much, and of Aloes half an ounce: boyl these in a Pottle of Beer or Ale till the one half be consumed, and then give it the Horse luke-warm to drink.

Take four ounces of Diapente, and mix it with four ounces of clarified Honey, and keep it in a close Glass, and give half an ounce thereof with a pint of sweet Wine to the horse to drink, and it is an excellent Drench. Take of Liquorish an ounce, of Anniseeds, Cumin-seeds,

seeds, Elicampane Roots, of each half an ounce, of Turmeric and Bayes, of each a quarter of an ounce, of Long Pepper and Fenugreek, of each two drams, beat these small and searce them, and put five spoonfuls thereof into a quart of Ale warmed, with a little Butter or Oyl, and it is very Sovrain for any Disease coming of cold causes. Take a quart of good Ale or Wine, a raw Egg beaten and mingled with twelve Scruples of quick Sulphur, and four Scruples of Myrrh made into powder, and give it the horse to drink, it is a good Drench. The powder of Brimstone mixt with sweet Wine, is a good Drench also. The Root of the Sea-Onion, the Roots of Popler, called the Greek Rhammos, mingled with common Salt, given in water, keepeth the Horse Long in health. Take fine powder of Fenugreek, and bruise it, seeth it in water till it wax thick, add a pound of sweet Butter, an ounce of Linseed Oyl, and as much of the Oyl of Nuts; mingle them well together, and give it the horse in three or four dayes to drink, by a pretty quantity at a time. Selladine simply of it self, or Rue simply of it self, boyled in Beer or Ale, and as much Brimstone as a Wall-nut, is an excellent Drench for any long taken surfeit. Garlick and Houfleeck beaten together in a Mortar, and then boyled in Beer or Ale from a Pottle to a Quart, then mixt with Liquorish, Anniseeds, and Sugar-Candy, and a pretty quantity of Sallet Oyl, is an excellent Drench for any inward sickness which doth proceed from hot causes, as is the Frenzie, the Anticor, and such like. And thus much of general Drenches, and their uses.

C H A P. CVI.

How to make the powder called Diapente.

THis word Diapente is as much as to say, Composition of five Simples: for the receipt is thus compounded. Take of *Gentian*, of *Aristolochia*, of *Bayberries*, of *Myrrh*, and of the shavings of *Ivory*, of each a like quantity, beat them into very fine Powder, and then searce it. This Powder is praised to be a Sovrain Preservative or Medicine against all inward Diseases: and therefore I would wish every Farrier, and all such as are the Masters of good Horses never to be without it.

C H A P. CVII.

A most famous Receipt, which is both a singular Drench and singular Oynment, called of the Italians Accopum.

TAke of Euforbium half an ounce, of Castoreum one ounce, of Adraces half a quarter of a pound, Bdclium half an ounce, and half a quarter, of Pepper a quarter of a pound, Fox Grease half an ounce, Opoponax one ounce, Lacerpitium three quarters of an ounce, Amoniacum half a quarter of a pound, Pidgeons Dung as much, Galbanum half an ounce, Nitrum one ounce one quarter, Spuma Nitri three quarters of an ounce, Ladanum a full quarter of a pound, Perethrum, and Bay-berries, of each three quarters of an ounce, Cardadam two ounces, Seed of Rue half a quarter of a pound, Seed of Agnus Castus one Ounce, Parsley half an ounce, dried Roots of Ireos, or Flower-de-Luce, one ounce one quarter, Hyfop and Carpobalsamum a quarters of a pound, Oyl of Flower-de-Luce a quarter of a pound, and half a quarter, Oyl de Bay as much, Oyl of Spicknard three quarters of a pound, Oleum Cyprinum three quarters of a pound, and half a quarter, the oldest Oyl Olive one pound and a half, Pitch a quarter of a pound and two ounces, Turpentine a quarter of a pound, melt every one of these that will melt, severally by themselves, and then mingle them together with the rest of the Simples beaten into fine Powder: and after that they have been a little boyled on the fire, take it off, and strain it into a fair Vessel, and whensoever you will give your Horse any thereof, give it him with Wine, or four or five spoonfulls with a pint of Sack or Muscadine: and if with long keeping it waxeth any thing stiff or hard, then soften it with the Oyl of Cipress, so that it may be good and thick.

This Confection is both a Medicine and an Oynment, if you put it in the Horses Nostrils, it will draw out all noysome humours, and discharge his head of all grief: if you anoynt his body therewith, it healeth all Convulsions, Colds, and Driness, or Withering of the Body; and if you bathe his Limbs therewith, it driveth away all weariness and tiring; and if you give it him with wine to drink, it cureth all kind of inward Maladies.

C H A P. CVIII.

How to make the Oyl of Oats.

TAKE of Milk two Gallons, and warming it on the fire, put thereto a quarter of a pound of burnt Allom, which will make it run of Curds, then take out the Curd and cast it away; then strain the Whay through a coarse Cloath in a clean Vessel: then take a quarter of a Peck of clean husked Oats that were never dried, and put them in the Whay, and set them on the fire till the Oats burst, and be soft; then take them off, and put them into a Cullender that is full of holes, so that the Whay may go gently from them without any pressing (for you must keep the Oats as moist as may be :) this done, put the Oats in a frying Pan, and set them over the fire, stirring them continually, till you see the Vapour or smook of them not ascend upwards, but as it were run about the Pan, then suddenly take them off, and putting them into a press, press them most exceedingly, and look what commeth from them, is only the Oyl of them, which you must save in a close glass. Now there are other more artificial and curious wayes to distill and extract this Oyl, but this of all other is the most easiest and surest for every meancapacity. This Oyl of Oats is of all Medicines and Simples whatsoever, the most excellent and Soverain for a Horses Body, as being extracted from the most natural, wholelom, and best food which doth belong unto a Horses Body. This Oyl being given by four or five Spoonfulls at a time in a pint of sweet Wine, or a quart of strong Ale, and some of the whay powred into the horges Nōstrils, doth Cure the Glaunders before all other Medicines. It is also (given in the same manner) the best of all Purgations; for it purgeeth away all those Venemous and filthy Humours, which feedeth the most incurable Farcy whatsoever. And for mine own part, as long as I can conveniently come by this Oyl of Oats, so long will I never in any Medicine whatsoever, use any Oyl or Unctuous matter than it only: I having found by experience, that it is the Soverain of all Simples of that kind, whatsoever they be.

C H A P. CIX.

*Certain brief Observations to be observed at home and abroad,
whilst the Horse is in health.*

THese Observations now following, are gathered from the most exact Principles, and unfaillible grounds of all the best and surest approved Hors-men, either of this Kingdom, or of any other Nation within Christendom.

First then, for the general feeding of your Horse when he is in health, you shall feed him with Straw, Hay, Oats, fine little Wheat, Beans, Barley, Bread made of Beans, Pease, or Fitches, or any other Meat that swels not in the Horses body,

It is the opinion of *Camerrarius*, first to give Provender, then Hay, and lastly water; but our English custom is, first Hay, then water, and lastly Provender.

In your travel feed your Horse betimes for all night, that thereby the Horse may sooner take his rest.

The quantity of Provender which you shall give your Horse at one time, shall be as much as you can hold in the palm of both your hands at six times, or three pints by measure.

Horse bread which is made of clean Beans, clean Pease, or clean Fitches, feedeth exceedingly.

Let your Horses Meat and Drink be exceeding sweet and clean, yet his Water by no means extreme cold running water from the Rock; for it pierceth too much.

To rub your Horses mouth with Salt and Wine, will make him both eat and drink with a much better appetite.

Let your Horse neither eat when he is hot, nor drink when he is hot, neither presently after his travel.

Labour your horse moderately, when the weather is either extreme hot, or extreme cold, that so you may avoid extreme heats, or sudden colds.

Travel not your Horse too late, that your own eye may see him well dried, and well fed before you take your own rest.

Never take your Saddle from your Horses back suddenly.

Lend not your Horse, lest your self walk on foot.

Let your Horse lye clean and dry, keep your Stable sweet, let no wine lye neer it, nor let any pullen come within it.

Let your Horse be ever tied with two Reins.

Let the light of your Stable be ever towards South and North, yet so as the North Windows may in the Winter be shut close at pleasure, and opened in the Summer to give fresh air.

Ride your Horse oft a little on stony wayes, that he may the better feel his feet, and harden his Hoofs.

Have ever near your Stable some close plain Green, that your horse being let loose, he may oft tumble-himself thereon.

Let your Horses bed be of soft sweet Straw, somewhat above his kners, of which, Wheat straw is the best: for though Barley-straw be the softest, yet a Horse will cover to eat it, and it is unwholesom, and Wheat-straw is not unwholesom to eat, yet it is hard to lye upon: as for Oat-straw it is the best in the Superlative, for it is both wholesom to eat, and soft to lie upon.

Curry or dress your Horse twice a day, that is, before water, and when he is curried, rub him with your hand, and with a Rubber; his head would be rubbed with a Wet-cloth, and his Cods made clean with a Dry-cloth: his Fore-top, his Main, and his Tail, would be often wet with a wet Main-comb, and ever where the horses hair is thinnest, there curry the gentlest.

Let the plattchers of your stable lye even, and Level, that your Horse may stand at his ease, and not prove lame by too much oppressing his hinder parts.

Let not any Mud-wall be within your horses reach, for he will naturally cover to eat it, and nothing is more unwholesom.

Give your Horse plenty of Garbage (which is chopt Wheat-straw) both with his Provender, and without.

Let your Hay bottles be very little, and tied very hard: for so your Horse shall eat with the best stomach, and make least waste.

To sprinkle water upon your Hay, is most wholsom, and to sprinkle Fenugreek upon your Provender, is a Soverain: the first is good for the Wind, the latter for Worms.

Give your Horse daily exercise, for that gets the best stomach to his meat.

Purge your Horse once a year with Grasse, or with green blades of Corn, called Forrage, for fifteen dayes together; yet before you purge

purge him, in any case let him bleed; and whilst he is in Purging, by no means let him have any Provender.

A Horse after travel hath ever more blood than any beast whatsoever.

Green Grass or Forrage cleanseth the blood, increaseth strength, healeth Diseases, avoideth Melancholy, helpeth the Horses growth, and maketh the skin smooth: whilst the Horse is at soyl, by no means let him take cold.

The Northern man watereth two hours before he rideth at the least, then lets the Horse eat a little Hay, then gives Provender, but not much, and bridlerh the horse up a quarter of an hour before he rideth: At night he watereth two miles before he taketh his Lodging, then riderh easily; he neither walketh his horse, nor stuffeth him, nor loofeth any Girt, but only rubbeth him very clean, and so lets him bite upon his Bridle half an hour after, with good store of Litter under him; then he gives the Horse Hay, and after Provender, before he goeth to water again, (yet but a little) then seeth the horse throughly well dressed and rubbed, well Littered, and most sufficiently meated.

There be others which walk after labour, then rub well, Littereth and unbridleth: both which be good, so that the one have not too much walking, nor the other too cold a Stable. But howsoever, stuff not your Horse backwards, but betwixt his foreleggs, and formost girt: for backward stuffing is perilous, lest drawing his yard when he would stale, he draw back in his sheath any of the Litter that stop him. The Northern man's use agreeth with the French principles, which saith: use no other walking than your self on your horse's back, by riding him gently till you come at your Inn, and so make him cold, then shake litter under him, rub his Leggs, his Belly, and every part of his body well, till he be dry, then unbridle him, rub his head well, and give him Hay; slack no Girt till it be night, that the Windows be shut; suffer the Horse to drink but a little at once, to avoid sudden cooling of the Stomach, or driving the horse into a shaking Fever: At night rub and curry well, and feed according to the Horses stomach.

Other good Farriers ride gently till the Horses sinews be chafed, and never water in travel till the horse have staled, and forbear to travel him fast before he hath drunk, that he may not drink in his

grat heat, and they hold the standing water the best; after water for a Mile they ride softly till his water be warmed in his Belly, and before they come to their Inn they do not water, nor of an hour after they have unbridled: then they Cloath well, and give Provender, having a care that their horses stand not in the Wind, and that they have been rubbed dry and clean. Now all these principles are exceeding good, yet I would wish every traveller to learn how his horse hath been used, and that custom (if it be not too much against reason) still to follow.

If you come late to your Inn, and that your journey be great and earnest, so that your Horse will not eat till he have drunk, and yet is hot notwithstanding, then let his drink be Milk given in the dark, lest the whitnes make him refuse it: this is both Cordial and pleasant: if you cannot get Milk enough, then mingle Milk with water luke-warm, for no drink would be given a horse hotter.

If your Horse either by labour or any surfeits be brought low, lean, and weak, you shall give him Mares Milk to drink many dayes together, and it will make him strong.

It is not good to wash your Horse, especially if he be either hot or very fat: otherwise you may wash his Leggs above his knees, so that in no case you wash his Belly, and that you ride him a good round pace after his washing, then by no means walk him, but see him up and dress him: The purer the water is wherein you wash your Horse, the more wholesome it is, so that it be not too extreme cold.

The best hours to water your Horse in, (when he lives at rest) is betwixt seven and eight in the morning, and four or five in the evening.

When you travel, at every steep Hill light, both to refresh your Horse and yourself.

Let a fat or hot Horse have his water at four times, and not so much as he will drink at once; give him Provender twice at night, and but once in the morning: let his Cloath neither be too hot, nor with Straw too much stuffed: when he eateth good Hay, let him have less Provender than when he eateth Straw: give his Meat by little at once to avoid glutting of him, and let him stand two hours every day without meat.

Rubbing much, hard, and well, doth profit, preserve, and doth keep

keep doth strength of Body and Leggs: for in rubbing and combing, a Horse doth take much delight, and it doth better than much meat.

To feed with Barley (according to the opinion of the antient Italians) Ingendreth good blood, encreaseth strength and courage, and maintaineth health; but with us here in England, we find Oats to be much better feeding.

In the Dogg-dayes it is not wholesome to ride your Horse oft in the water to allay his natural heat.

The Masters eye to see his Horse well carried, and with the hand well rubbed, and well meated, and the Stable sweet and clean kept, preserveth health, and wonderfully feedeth the horse.

Cleanse and pick the soles and bottoms of your Horses feet oft, and stuff them well with Ox-Dung, anoynt his hoofs with fresh Grease, Tar, or Turpentine.

Much rest is the Mother and the Nurse of many Diseases. When you ride, look often to your Saddle, and your Horses shoes; and you shall find much more ease in journey.

C H A P. CX.

Certain special Principles in Foals and in Horses.

THe Foals whose Legs be long, will ever be tall, for of all beasts their Legs in length ever grow the least, and by the bigness of their Legs you shall guess the strength and greatness of their bodies.

Let your Colts, if you can possibly, never be housed till they be past three years old.

The Greek Horse (which we call the Turkey Horse) is a most excellent horse, swift, bold, well headed, tall, and strong; many of them be White, some Bay, some Sorrel, and some Black.

The Arabian Horse is most swift, and most beautifull.

The Horse of Africa, which we call the Barbary horse, is of good courage, swift, and nimble, and therefore both the Turkey horse, and he must be used with all lenity and gentleness, and not with beating.

The Frizeland Horse is fiery, yet the worst of any.

The Flemish Horse is worse than the Frizeland.

The Spanish Jenet is good, swift, and light.

The Neapolitan Courser for all uses is most excellent and beautiful.

And the English Horse is best both for great burthens or Long travel.

Observe to win your Horse by patience and gentleness, and never be angry or mad with your horse, if he be of great metal; only the dull horse must with much beating be quickned and enflamed.

Anoint your Bit when you put it first into your Horses mouth, with honey, and the Powder of Liquorish, or else with honey and Salt: and at no time put any Bit or Snaffle into your Horses mouth before you have washt it.

Never take your Horses back before you have the Bridle Reins fast in your hands; and when you walk down any Hill, by no means drive your horse loose before you.

If your Horse have a long back, let him have a large Saddle, and if he have a low back, let the Saddle have a high seat, and if his back be short, let the Boulsters stand the neerer and closer together.

If your Horse be dull, you must spur him soundly, and after such spurring, rub his sides with Salt.

C H A P. CXI.

Certain general Observations concerning Mares.

IN length and height, a Mare groweth till she be five years old, and a Horse till he be six.

When a Mare is past two years old she may be covered, but the best time is after four year old.

Common Mares may bring Foals every year, but let your best Mares bring but every second year, especially if they bring Horse Colts.

After covering by no means travel your Mares.

To get Horse Colts, cover before the full of the Moon, and when the sign is a Female: and to get Mare Colts cover after the full, and in the Male signs: for note it, there be twelve signs, six Male, and six Female.

To make a Mare stand to her Horſing, ſet her by the horſe two or three dayes, that he may much deſire, and be acquainted before he cover her: After bring them out, and let him ſerve her, and have ready a pail of water, which, when the horſe ſhrinketh from her, powr upon the ridge of the Mares back: then ſet them ſo far aſunder as that the one may not hear the other: Do this three mornings, and three evenings together, then let her not come neer the horſe after, till ſhe be knit, leſt the deſire of him again, make her to ſhoot out that which ſhe kept before:

To know whether your Mare be with Foal about Chriſtmas, or no, powr a little Water into her ear, and if ſhe only ſhake her head, ſhe is then with Foal, but if ſhe ſhake both head and body alſo, ſhe is not with Foal.

When you wean your Foals, take them from the Mares four dayes before the full of the Moon, and after the Foals have ſo remained four and twenty hours, let them again ſuck till they wax very full: then remove them for altogether, and the next morning give every one three ſlips of Saven, and ſo after let them have till they be three years old, all plenty of meat abroad, rather than in the Stable.

Let your Stallion for Trotters be either Neapolitan-Courſer, or Arabian, Turk, or Barbery, and for Amblers, either the Spaniſh Jener, or the Iriſh Hobby.

Put your Mares to the Horſe, from middle March till middle May, or middle June, the Moon having newly changed.

It is good to put the Horſe and the Mare for three or four nights together in ſome vaſt empty houſe, and in the morning take the horſe away, and feed him well; but feed your Mare ſparingly, eſpecially give her little water.

At the end of ſix moneths, by no means chaſe your Mares; or then they are in quickning, and may eaſily be made to caſt their Foals.

The Wall-eye either in Mare or Horſe, doth never ſee perfectly, eſpecially when there is any Snow on the ground.

A Mare goeth with Foal eleven moneths and ten dayes.

Let your Maie be of a mean ſtature, large, and broad, and of good ſhapes; and the Stallion of like ſhape, but ſomewhat taller; and temper their Natures thus: Put unto the hot Horſe the cool Mare, and to the hot Mare the cool Horſe: and let your grounds wherein you breed, be Dry, Hilly, and with running ſtreams in it.

C H A P. CXII.

Certain special Notes to be observed in the buying of a Horse.

First, mark his colour and his shape, that is to say, a comely well proportioned head, with an out looking eye, good well raised shoulders, and a thick large breast, broad brawn, large and broad flat Leggs, short Pasterns, and little feet: for long Pasterns shew weakness, and broad feet shew dulness; feel if he have no Glanders between his Chaps, no Splents, Curb nor Spaven, look he be not Pur-sick or broken-winded: put your hand before his Eyes, to know if he see well. Look into his mouth for his age: if he be past eight years old, feel all down the strut of his Tayl with your hand, and if you feel that it be smooth, then the horse is not very old, but if it have any rough knobs towards the end, buy him not, for his good dayes are past. Let him run at the Halters end, for if he be lame (having that liberty) he would favour that Leg which is amiss, and not lean upon it. If he turn up the white of his Eye, or lay his Ear to his Neck when he is ridden, he is a sullen Jade, and full of naughty qualities: if when you stir him in the Stable, he stare and look back upon you with a stout Countenance, it is a token of a good stomach in him; and great aptness to be taught: if he stir the end of his Tayl as he passeth out, and is ridden, and yet doth not wisk it, it sheweth that his pace is unperfect: be sure to see him turn as short as may be, that you may know whether he be swayed in the back or no: the middle stature is the best, and the short knit Horse is the strongest. The Wall Eye ever seeth the worst.

The Horse that is of nature Gentle, swift, light, nimble, of easie pace, and good colour, strong feet, good Loyas, speedy in eating, and good at his Provender, is ever the best for use, and the readiest money in the Market at all times. See if the hair in the spurring place be white, for it argueth slowness and spur-galling.

The Horse that will paw and beat the ground with his foot when he is stayed from going forwards, is ever like to be good and durable in travail.

Many other notes there are that are needless to rehearse, which by the observing of these will easily come into your memory.

C H A P. CXIII.

General notes concerning some Simples already spoken of.

ALL manner of Marrows or Pichs, of what kind soever they be, must be kept by themselves in a dry cool place, and preserved from all filth or uncleanness, and from the annoyance either of wind or fire, and so they will last fully out a whole year.

You shall keep no Syrrups, nor sweet Electuaries, nor Pills, nor Powders, nor Conserves of Flowers, nor any Oyntments, Sucts, or Emplaisters, above one whole year, only bitter Electuaries, or Conserve of Fruitors Roots, will last fully out two years.

Of Oyls, some will last long, some must be new made: Oyls extracted out of Wood or Metals, will last long.

Gather Roots in Autumn, but take the small sprigs from them, and make them clean and dry.

Dry small Roots in the shade and Wind, and great Roots either in the Wind and Sun, or by the fire: lay them in a dry place towards the South, and they will keep long, provided that neither Sun nor moisture injure nor hurt them.

Gather all manner of Herbs when they do most flourish, and dry them in the shade, except they be very moist and apt to putrifie; they last for the most part a whole year.

Gather Seeds and Fruits when they be fully ripe; they also last but one whole year.

Gather the Rind or Bark of any Simple when the Herb is ripe: drie them, and they will last many years.

CHAP. I.

*What proportion of measure is required in every member of a
well shapen Horse.*

As much as the great substance of this Art of Chirur-
gery, or second part of Horse-leach-craft, applied
only unto outward infirmities, consisteth of Inci-
sions, Cauterizings, Corrodings, and Dismembrings,
as well as of Comfortings, Incarnating, Cleansing,
Conglutinating, and binding up Members in their

true form, and that all joyntly together, go but about to make a
true and well-formed Body: I think it meetest that I begin with
the true proportion and measure which is required in every Member
of a well shapen Horse, that the careful Farrier thereby understand-
ing how, and in what fashion every Lineament should be placed,
or what proportion and quantity they do contain, he may at no time
through ignorance either dismember or disgrace the same: as I
have

have many times seen simple Farriers do, when contrary to all Art and Rule, they have cut in sunder the main Cords, Sinews, and Tendons, by which a horses Limbs are governed.

To begin then, you shall understand, that, according to the Description of the most antient and worthy Farriers: there are in a Horses Palate of his mouth twelve bars or degrees like steps, one above another, standing (when his mouth is turned upwards) like a pair of stairs: his tongue would be half a foot long, his upper lip six inches, and his neather lip five inches long; each of his Jaws would be ten inches long, his head from his Eyes down-ward full twelve inches long, his Ears five inches long, the circuit or compass of his Eye four inches about, his Neck from the nape of his Head unto the Withers would be seven handfulls, from the Withers to the Fillers twelve handfulls, and from the Fillers to the setting on of the Tayl six handfulls: The Length of the shoulder would be twelve inches, and the Length of his Shank six inches, the Length of his hinder Hoof would be twelve inches, and his Cambrel five inches, and the Length of the whole Body from the head to the Tayl would be an hundred inches. Now as horses are bigger or lesser, so these measures either exceed, or are less; neither do I confidently build upon these quantities of the antient Farriers, because, I having my self measured many horses, I never yet could find any certainty in the proportions: only this is the most certainest rule that ever I could find, that look what quantity is between the Nape of the Horses Neck, and the uttermost part of the Withers, there must ever be twice so much between the Withers and the setting on of the Tail; and look what quantity is between the top of the shoulder-blade, or top of the Withers, to the Elbow of the Horse, it must be twice so much from the Elbow to the setting on of the Hoof: And look how much is from the top of the Hip to the stifling place, it must be twice so much from the stifling place to the setting on of the hinder hoof: And this is the certainest rule that ever I could find for a Horses tract proportion. And therefore for your better satisfaction, behold this Picture that is now here placed, which is the Anatomy of a most perfect horse, with lines drawn from every member, directing and shewing all the outward Diseases or Sorances belonging to a horses body,

CH. V. II.

C H A P. II.

Of the Veins belonging to a Horse, and how many there be.

IT is most necessary, that every good careful Farrier know all the principle Veins in a Horses body, especially those which in the time of need, or in sickness are to be opened: And therefore to begin, you shall know that from the Liver, which is the Fountain of blood, both in Man and Beast, doth arise one main great Conduit or large Vein, which ascending into the body, doth divide it selfe into thus many several branches, or lesser Rivers. First, within the Palate of his mouth, above the first and third bars, are two notable Veins, which the best Farriers do touch and strike when the Horse hath any Disease in his Head, Brain, or Stomach: He hath also other two which descend down from the lower parts of his Eyes unto his Nostrils, and are ever opened for any grief in the Eyes: He hath two others which are above his Eyes, and run cross the Temples of his head, and are called the Temple Veins, which are likewise opened for all manner of cold Diseases in the head; he hath also two great main Veins running along each side of the Wind-pipe, even from the uppermost joynt of his nether chap down to the Breast, which are called the Neck Veins, and are those which are ordinarily opened for any Disease whatsoever. He hath then two Veins which arise upwards from between his fore Legs to the top of his breast, and are called the Breast-veins, and they are opened when the horse hath any Fever, or is sick at the heart. He hath other two which likewise ascend from between the fore Legs, but do not mount so high as the Breast-veins, but rest upon the formost bough of the fore-leg, and they be called the Flat-veins, and they be opened either for foundring, or other grief in the Limbs. He hath other two Veins which run down from the Elbow of the fore shoulder, down all along the inside of the fore-legs, and are called the Shank Veins, which are opened for Splents, Mal'ander, or such like. He hath then four Veins which run along the fetlocks of the horse, and are called the shackle-veins, which albeit, they are but small, yet they are many times opened for stiffness in the Joynts, or for tying: then he hath four Veins about the Cronets in his hoofs, and are called the Cronet-
Veins,

Veins, and are opened for foundring in the Feet, or for Ring-bones: then he hath four Veins within his four Hoofs, running about his Toes, and are called the Toe-veins, and are only opened for foundring or frettizing in the Feet: he hath then two main great Veins which descend down from his stones alongst the inside of his Thighs to his Cambrel, and are called the Kidney-veins, which are onely opened for Diseases in the Kidneys: He hath then two other Veins which descend from above the hinder Cambrel, all alongst the inside of the hinder Legs down to the Feet locks, and are called the Spaven-veins, which are opened for the blood spaven only: He hath then two veins in his Flanks, which are called the Flank-veins, and are opened for any grief in the Reins or Fillets: he hath then two veins in his hinder Hanches called the Hanch-veins, and are opened for any manner of Consumption of the flesh, or such like: Then he hath two Veins which run alongst his side, even from the Elbow of the fore-leg unto the flank, and are called the Spur-veins, and are opened for foundring or Spur-galling. Lastly, he hath one single Vein in his Tayl, which is called the Tayl-vein, and is opened for the shedding of the hair or any manginess. So there is in a Horses body of principal Veins, which upon occasion must be opened, just thirty seven, as you may perceive by this Figure, which is the true Anatomy of all the principal Veins and others within a horses body; where you are to understand, that the Letter *A* sheweth the Temple-vein, *B* the Eye-veins, *C* the Palat-veins, *D* the Neck-veins, *E* the Breast-veins, *F* the Plat-veins, *G* the Shank-veins, *H* the Cronet-veins, *I* the Hoof-veins, *K* the Spur-veins, *L* the Kidney-veins, *M* the Spaven-veins, *N* the Flank-veins, *O* the Hanch-veins, *P* the Tayl-veins, *Q* and *R* the Fet-lock-veins. Now for the other small Threds, or Veins, which as it were, over-spread the whole body, because nature will allow no part or Member to be empty or void of blood, they be also veins, derived from the other main great Veins, yet of no efficacy or force, but such as upon any necessary incision may very well be cut asunder without any flux of blood, or other danger: but for the other Master veins, they may not be cut but with great peril. And thus much for Veins, which are the instruments of heat.

C H A P. III.

Of the Sinews in a Horses Body.

Touching the Sinews within a Horses Body, you shall understand, that from the Brain, which is the principal Fountain or Well-spring of Sinews whatsoever, there is derived one great main Sinew or Tendon, which passing through the hollownels of the Neck and Back bone, doth extend it self even to the nethermost Joynt of the Horses Strunt: From his main Sinew is derived two small Branches, which passing through certain holes in the top of the Horses skull, run down alongst the horses Cheeks, even to the point of his Nostrils: Then hath he two other branches, which passing through certain holes in his nether Chap, knit that and the upper together, and so run down by his great Teeth, and meet just below his nether Lip: then hath he twenty eight small Threds, which running through so many small holes in the seven bones of his Neck, knit them fast together: So likewise to Knit all his Chine even to the very nether end of his Strunt fast together, the number whereof is infinite, and uncertain: Then hath he two main great Sinews, which extending themselves over both the Spade-bones, are divided into many branches, and run down into the Fore-legs, even into the Coffins of the Hoofs, and Knit every Joynt fast and substantially together: then hath he two other main Sinews, which coming through two holes to the great Columel or flat bones of the Hips or Huckle, do extend themselves (being divided into many branches) down both the hinder Legs, even within the Coffins of the hoof also, & bind all these several Joynts fast & strongly together. Now lastly, you shall understand, that from the setting on of the horsesneck, unto the flat Columel or Huckle bone, doth extend one great broad Sinew of three inches broad, being of one only thick and smooth substance, without any one Thred or Branch derived from it, which not only holdeth together the shoulder-blades, but also covereth all the horses Chine quite over, and this of the common F. rriers is called Pax-wax: So that a Horse hath in all of main and principal Sinews, from whence a World of other Sinews are derived, just thirty eight, as you may more plainly perceive by the Picture aforegoing, which is the perfect

perfect Anatomy of all the Sinews within a horses body, and how they are divided.

C H A P. IV.

Of the number, and situation of Bones in a Horses Body.

First, you shall understand, that every Horse or Ox, hath in his whole Body, just one hundred and seventy several bones, and no more: that is to say, in the upper part of his head two bones, from the Fore head to the Nose two bones, his nether Jaws two bones, of fore Teeth Twelve, of Tusks four, of Grinders twenty four, from the Nape of the Neck to the points of the Spade bones, seven; from the Spade bones to the Huckle bones, eight; from the Huckle bones to the end of the Tail, seven: Then is there the great broad hinder bone, which hath twelve Seams or Joynts in it; then is there the two Spade bones, and from thence to the Forcels or Canal bones, other two bones called the Marrow bones, and from thence to the first joynt above the Legs other two bones, and from thence to the knees, two called the Thigh bones, and from thence to the Pasterns other two called the Shank bones, and from thence downward into the hoofs be in all 16 little bones. Then there is a great bone in the Horses Breast, whereunto are fastned 36 Ribs great and small, and to the Columel behind be two bones, and from the Molars to the Joynts other two bones; and also two bones towards the Ribs, from the bending of the Hoof unto the Leg, are two small bones, and from the Leg to the two focils of the Leg other two little bones, and from the Pasterns into the Hoof, sixteen little bones: all which, and their several situations you shall more plainly behold in this Picture, which is the most perfect Anatomy of the bones of a Horse, being simply compounded together, that can be by demonstration.

C H A P. V.

How, and when a Horse should be let blood, the end whereof, and the signs of the necessity.

THe antient Farriers, and those of these present times, are at great difference touching the letting of a Horse blood: For some would have him let blood four times in the year; that is to say, in the Spring, in the Summer, in Autumn, and in the Winter. Others would only have him let blood three times in the year: namely, in May, when he is turned to Grass, because the blood then be- ginneeth to encrease. Secondly, in September, that blood if it be in- flamed, may then evacuate and breath forth. And thirdly, in December, to let go the gross and knotty blood which is bred by la- bour or careless keeping. Others would have a horse to be let blood but once in the year: namely, in the beginning of May only, when he is to be put to Grass, alleging this reason, that if the Horse be not let blood in the Spring, the new blood being mixt with the old cor- rupt blood, will be apt to be inflamed and so draw upon the horse some grievous sickness, and this reason is excellent good. Others would have the Horse to be let blood in the Vein not above once in a year; namely, at the beginning of May: but in the Palate of the mouth they would have him let blood at least once every moneth, alleging that it will clear the sight, comfort the brain, and give him good appetite to his meat: but to conclude, there is not any of these opinions but are sound and good, so the Horse be young and in strength, his blood increasing; but if he be old, and his blood in the Ebb, then you cannot let blood too seldome. Now that it is sic a young horse should be let blood, is proved by the daily experience of the Polander Horses, who being at liberty (out of natural instinct in themselves) sail not once a year to let themselves blood; yet we have divers of our best Farriers, who would not have a Horse let blood before there be urgent necessity, lest the use of letting blood bring a Horse to an evil custom, and draw on sickness unexpected; but with that opinion I cannot agree, because I hold it more vertue to prevent a danger before it come, than to drive it away being present. Now that oft letting of blood breedeth in a Horse weakness, and maketh

maketh the blood to resort to the inward parts, cloying the Heart and Intraills, and making the outward parts fat and unweldly, there is no question but that the letting a horse blood twice in the year, namely, at beginning of May, and the end of December, (at which times only I would have a Horse let blood and no other) should be accounted oft, I see no reason. Now for Stallions, the ancient Farriers would by no means have them let blood, because say they the covering of Mares is as great an expence of blood as may be, affirming that one ounce of Seed doth countervail five ounces of blood, and truly I am of that opinion too: but whereas they likewise advise by no means to let Geldings blood, because the loss of their stones is the loss of their natural heat; to that I am much contrary, because I have found it by continual experience, that Geldings do as oft dye through the Corruption and abundance of blood as Horses; Nay, and much more often, in as much as they want the helps which Horses have for Purging their bloods from uncleanness. Now in the letting of Horses blood, every careful Farrier is first to respect the Climate under which the horse is bred, knowing that those Horses which are bred in cold Countreys, have ever more blood than those which are bred in the hot: then he must consider the time of the year, which would ever be the Spring, or the fall of the Leaf, both these times being most temperate, neither exceeding in heat nor in cold. Next he must regard the time of the day, which would ever be in the morning fasting, so it be not at the Horses waking from sleep, but at least an hour or two after; then he must look unto the state of the Moon, that the sign be not in that part of the body where he intendeth to let blood. Next he must look to the Horses age, if he be young, and not come to his growth, it will hinder his waxing; and if he be old and come to decrepitness, his blood had more need be repaired than wasted. Lastly, he shall look to the Horses strength and ancient custom, and so accordingly he shall deal with him, observing that some horses may better spare two or three pound of blood, than other some one pound. Now thus much I have spoken touching ordinary and natural letting of blood, without compulsion of any sickness or Disease; but in case where sickness or infirmity craveth this office of letting blood, there you shall neither respect Climate, Season of the year, time of the Day, Sign, Age, strength nor custom, but setting all aside, apply your self onely to the re-

removing of the infirmity. Now the signs to know if a Horse stand in need to be let blood are these: his Eyes will look red, and his Veins will swell more than ordinary: also he will have a certain itch about his Main and his Tayl, and still be continually rubbing them; and sometimes will shed some of his hair also: he will now and then pill about the Roots of his Ears, or in those places where the head-stall of the Bridle lies: his Urine will be red and high coloured, and his dung will be black and hard: also if he hath red inflammations, or little bubbles on his back, or doth not digest his meat well, it is a sign the Horse would be let blood: or if he have any apparent sign or yellowness in the whites of his Eyes, or in the inside of his Lips, either upper or nether, it is a sign he would be let blood: for after any of these signs doth most commonly follow some one or other grievous sickness, which to prevent is the true Art of a skilful Farrier. Now it is meet that when you intend to let a Horse blood (having leasure to do the same) that you suffer him to be thinly dyed a day or two before he be let blood, to the end that his body may be quiet, and not troubled with digestion. Now for the manner of letting a horse blood, you shall as near as you can, let him stand upon even ground, and if it be the Neck-vein which you would strike, you shall take a long small Cord with a noose, and putting over to the horses Neck, as close to the setting on of the shoulder as you can, there draw it as straight as is possible, and then fasten it with a running knot, and presently you shall see the Veins to appear as big as a mans little finger, even from the nether Chap down to the Neck. Now you are to observe that the place where you are to strike the Vein in, is, even within three fingers or four fingers at the most of the nether Chap: as thus; if your Horse have a Long, fine, thin Neck and skin, then you may strike the Vein within three fingers, or less of the Chap, (such the higher is ever the better) but if he have a short chub Neck, with a thick skin, and many wreaths or rous about the setting on of his Chaps, then you shall strike the Vein at least four fingers from the Chap, lest those wreaths together with the thickness of the skin, do so defend the Vein that your Fleim cannot reach it. When you have thus raised the Vein up, you shall cause one to stand on the contrary side of the Horse, and with his fist thrust the Vein forth hard against you: then you shall either with a wet Sponge, or with a little spittle, wet the part of the vein which you

you mean to strike, and then separating the hair, set your Fleim even and directly upon the Vein; and then with a good smart blow strike it into the Vein: Which done, you shall cause one to put his finger into the Horses mouth, and tickling him in the roof thereof, make him chew and move his Chaps, for that will force the blood to spin forth; now the blood which you take from the horse, it is very necessary that you save in divers Vessels, for divers causes: as first, that you may see when all the corrupt blood is come forth, and that when the colour thereof is grown pure, and so remaineth being cold, that then you suffer the Horse to bleed no more; or else that you save it to bathe the Horses body therewith, which is most wholesome; or else to make a Medicine therewithall by mingling with the blood Vinegar and Oyl, and so bathe the Horses body therewith, especially that place which was let blood. For the antient Farriers hold an opinion, that it is endued with a certain natural vertue, and power to comfort the weak and feeble Members of a Horse, and to dry up all evil humours. Now as soon as your horse hath bled sufficiently, you shall Let loose the Cord, and immediately the vein will stop; then with that Cord you shall stroak down the Vein just over the Orifice twice or thrice, which will both close up the hole, and also turn the course of the blood: this done, set the Horse up in the Stable, and let him stand fasting two or three hours after, and then after dyet him according as in your discretion you shall think meet, that is to say, if he be a sick Horse, then like a sick horse with good Provender and warm Mashcs: but if he be a sound Horse, then like a sound Horse, either turn him to Grass, or keep him in the Stable after his antient custome.

Now if you would let your Horse blood either in the Temple-veins or the Eye veins, you shall then Cord him hard about the midst of the Neck, and not near his shoulders, having a care that you touch not his Wind-pipe, and so throttle him: for it will make both these Veins shew most apparently. If you intend to let the Horse blood in the Breast-veins, or Plat-veins, of some called the fore Thigh-veins, you shall then Cord him behind the shoulders, close to the Elbows of the horse, and over-thwart his Withers, and that will make these two Veins shew. Now you shall understand, that not any of these veins last spoken of, as about the Head or the Breast, must be let blood by striking them with a Fleim, (though it be the manner of

our common Smiths) for it is most beastly and butcherly, and also full of much danger by striking through the Vein, (if he be not skilfull:) but you shall with a fine sharp Lancet open the Vein, even in such sort as you see a skilfull Chirurgeon open the Vein in a mans Arm. Now for the Letting a Horse blood in the Palat of the mouth, you shall but only with a sharp pointed Knife, prick the Horse between the second and third bar, as deep as a Barley Corn is Long, and he will bleed sufficiently: as for all other Veins in a Horses Body whatsoever, which are to be opened, you shall understand, that whensoever it is needful that they bleed, that then they must be taken up, and not Corded at all. Now touching the taking up of Veins, and the manner how to do it, you shall read more at Large in particular Chapters towards the end of this book.

C H A P. VI.

Of outward Sorrhances what they are, and of certain general Observations in the Cure of them.

Outward Sorrhances, according to my meaning in this place, are taken two manner of wayes, that is to say, either it is an evil state and composition of the body, which is to be discerned either by the shape, number, quantity, or sight of the Member evil affected and Diseased: or else it is the loosning and division of any unity, which as it may chance diversly, so it hath divers names accordingly. For if such a division or loosning be in the Bone, then it is called a Fracture: If it be in any fleshly part, then it is called a Wound, or an Ulcer: If it be in the Veins, then a Rupture: if in the Sinews, then a Convulsion or Cramp; and if it be in the Skin, then it is called an Excoriation: and of all these severally I intend to treat in the following Chapters. Now for as much as in this general Art of Chirurgery, or Sorrhances, there are certain general Observations, or Cavcats to be held inviolate, I will, before I proceed any further, give you a little taste thereof.

First, you shall therefore understand, that it is the duty of every good Farrier, never to burn or Cauterize with hot Iron, or with Oyl, nor to make any incision with knife, where there be either Veins, Sinews, or Joynts, but either somewhat lower, or somewhat higher.

Item,

Item, You shall never apply to any joynt or Sinewy part, either Rosalgar, Arfnick, Mercury, Sublimatè, nor any such violent Corrosive.

Item, It is ever better to Launce with a hot Iron than a cold, that is, it is better to Cauterize than to incise.

Item, Blood doth ever produce white and thick matter, Choler a watrish thin matter, but not much, salt Flegm, great abundance of matter, and Melancholy many dry Scabs.

Item, When you Let blood, you must take but the fourth part from a Colt, which you take from a grown Horse.

Item, You must never Let blood, except it be either to divert sickness, and preserve health, or to refresh and cool the blood, or else to diminish blood, or to Purge bad humours.

Item, In all Impostumes or swelling Sores, called Tumors, you must observe the four times of the sickness, that is to say, the beginning of the grief, the increase of the grief, the perfection and state of the grief; and lastly, the declination and ending of the grief.

Item, In the beginning of every such swelling Apostumes (if you cannot quite destroy them) use repercussive Medicines, if they be not near some principal part of the body; but then not, for fear of endangering life; and in augmentation, use mollifying Medicines, and suppling to ripe them; and when they are ripe, Launch them, and let them out, or dry them up, and in the declination of them, use cleansing and healing Medicines.

Item, All swellings are either hard or soft, the hard commonly will Corrode, the soft will continue Long.

Item, If you thrust your finger upon any swelling upon a Horses Legs, then if it presently rise again, and fill, then is the hurt new and recoverable, but if the dent do remain and continue still behind, then is the hurt old, and cometh of cold humours, and asks great Art in healing.

Item, When Sores begin to matter, then they heal, but if the putrification be great, then beware they rot not inwardly.

Item, All Cauterizing or Burning with hot Irons, straineth things enlarged, drieth up what is too much moistened, dissolveth things gathered together or hardned, draweth back things which are dispersed, and helpeth old Grievs: for it ripeneth, dissolveth, and maketh them to run and issue forth matter.

Item, You must sometimes burn under the Sore, to divert Humours, and sometimes above, to defend and withhold humours.

Item, It is ever better to burn with Copper than with Iron, because Iron is of a malignant nature, Steel of an indifferent vertue betwixt both.

Item, All actual burnings is to burn with instruments, and potential burning is to burn with Medicines, as are Causticks and Corrosives.

Item, If you use to blow Powders into a Horses eyes, it will make him blind.

Item, By no means take up any Veins in the forelegs, unless great extremity compel you: for there is nothing that will sooner make a Horse stiff and lame. Many other observations there are, which because they are not so general as these be, and that I shall have occasion to speak of them in other particular Chapters, I think it here meet to omit them, and the rather, because I would not be tedious.

C H A P. VII.

Of the Diseases in the Eyes, and first of the weeping and watering eye.

THE Eyes of a Horse are subject to many infirmities, as first to be Rhumatick, or watry, then to be blood-shotten, to be dim of sight, to have the Pin and Web, the Haw, the Wart in the Eye, the Inflammation of the Eyes, the Canker in the Eye, or a stroak in the Eye: of all which, some come of inward causes, as of humours resorting to the Eyes; and some of outward causes, as Heat, Cold, or else by some stripe or blow.

And first to begin with the Rhumatick, or watry Eye, you shall understand, that, according to the opinion of the ancient Farriers, it doth proceed many times from the Flux of Humours distilling from the Brain, and sometimes from the anguish of some blow or stripe received. The signs are, a continual watering of the Eye, and a close holding of the Lids together, accompanied sometimes with a little swelling. The cure, according to the opinion of some Farriers, is, to take of Bolearmonick, of Terra sigillata, and of Sanguis Draconis, of each a like quantity; make them into Powder, and then add unto them

them as much of the white of an Egg and Vinegar, as will make them moist: and then spread it Plaister-wise upon a Cloath, and lay it to the Horses Temples of his Head above his Eyes: and do this three dayes together. Others use to let the Horse blood in the Veins under his Eyes: then to wash the Eye twice or thrice in the day with white Wine, and then to blow into the fore Eye with a Quill, the Powder of Tartar, Salgemma, and Cuttle bone, of each like quantity: or else take the yolk of an Egg roasted hard, and mix therewith the Powder of Comen, and bind it hot to the Eye, and so let it rest a night more. Other Farriers use to take of Pitch and Rozen, and of Mastick a like quantity, melt them together: Then with a little stick, having a Clout bound to the end thereof, and dipt therein, anoynt the Temple-veins on both sides a handfull above the Eyes, as broad as a twelve pence, and then clap unto it immediately a few flocks of like colour to the Horse, holding them close to his head with your hand, untill they stick fast to his head, then let him blood on both his Eye-veins, if both Eyes be sore, and then wash his Eyes with white Wine.

Others use only to take a pretty quantity of life Honey, and to dissolve it in white Wine, and to wash the Horses Eye therewith: and sure if it proceed from any blow, it is Medicine sufficient enough; but if it proceed from any Rhume, or inward causes, Then you shall take ground Ivy beaten in a Morter, and mixt with Wax, and so laid to the Eyes like a Plaister, or else boyl Worm-wood in white Wine, and wash the Horses Eyes therewith: also to spurt Beer or Ale now and then into the Horses Eyes, will clear the sight passing well.

CHAP. VIII.

Of the Blood-shotten Eye, proceeding from any cause whatsoever.

FOR any Blood-shotten Eye, proceeding from any cause whatsoever, either outward or inward, you shall take (according to the opinion of the most ancient Farriers) of Rose-water, of Malmsey, and of Fennel water, of each three spoonfulls, of Tatty as much as you can easily take up between your Thumb and your Finger, of Cloves a dozen beaten into fine Powder, mingle them well together, and

and being luke-warm, or cold, if you please, wash the inward parts of the Eye with a feather dipt therein twice a day untill the Eye be well: or instead thereof, wash the Eye either with the white of an Egg, or with the juyce of Selladine. Others use to take the tops of Hawthorns, and boyling them in white Wine, wash the Eye therewith. Other Farriers take a Dram of Synoper, and as much lisse Honey, as much of Wheat-flower, mix them with fair running water, so they may be liquid and thin, then seeth them with a very soft fire till they be thick like an Oynment, and therewith annoynt the Eye.

But the best receipt that ever I found for this grief, is, to take the Whites of two Eggs, and beat it till it come to an Oyl, then put to it two spoonfulls of Rose-water, and three spoonfulls of the juyce of Houfseek, mix them well together, then dip therein little round Plegants or flat Cakes of soft tow, as big as a Horses Eye, and lay them upon the Horses Eye, renewing them as oft as they grow hard, and in a day or two it will make the Horses Eye sound again.

CHAP. IX.

Of Dimness of sight, or blindness.

Dimness of sight, or blindness, may happen to a Horse divers wayes, as by some strain, when the inward strings of the Eyes are stretched beyond their powers, or by the violence of great labour, or by the supporting of a great burthen beyond the Horses ability, or by some blow or wound: any of these are mortal enemies to the Eyes or Sight. The sign is the apparent want of sight, and an evil affected colour of the Eye. Now for the Cure, it is thus:

If the sight be gone, and yet the ball of the Eye be sound, then you shall take, according to the opinion of some Farriers, a pretty quantity of May Butter, with as much Rosemary, and a little yellow Rozen with a like quantity of Selladine, then stamp them and fry them with the May Butter, then strain it and keep it in a close Box (for it is a Jewel for sore Eyes) and annoynt your Horses Eyes therewith at least twice a day; it is also good to heal any wound. Other Farriers do use to let the Horse bleed in the Eye-veins, and then wash his Eyes with red Rose-water. Others use to take the Gall of a black

black Sheep and beat it, and strain it, then to wash the Eyes therewith: others use to burn the Horse under the Eye that the ill Humors may distil forth, and then to annoint his Eyes either with the Marrow of a Sheeps Shank, and Rose-water mixt together, or else with the juyce of ground ivy. Other Farriers use to take a Mould-warp, and lapping her all over in Clay, burn her to ashes, and then to take of that Powder and blow into the Horses Eyes. Others use to take an empty Egg-shell, and fill it with bay Salt, then burn it till it be black: Then add to it of burnt Allom the quantity of your Thumb, beat them together to fine Powder, then mix some of this Powder with fresh Butter, and wipe it into the Horses Eye with a feather, then clap the white of an Egg dipt in Flax, over his Eyes: do this once a day for a seven-night, and alter but once in two dayes: This is most excellent for any film, and also for a Pearl. Others use to take two dry Tite-stones, and rub them together, and blow the Powder of it with a Quil into the Horses Eyes four dayes together.

C H A P. X.

A most rare approved Medicine for any desperate blindness in a Horse, proceeding from any Rhumatick cause, Swfeit, Strain, Siroak, or such like.

TAKE of Vermilion, Berony, and lavender, and beat them in a Morter with the best Venice Turpentine, till they come to a thick Salve like Paste: then make it into Cakes or Troches, each as broad as a Groat, and dry them: then lay one or two of them upon a Chafing-dish and Coals: And then covering them with a Tunnel, let your Horse receive the smoak up into his Nostrils, and this do Morning and Evening: and every time you thus Fume him, you shall also wash his eyes inwardly, either with the water of Eye-bright simply, or with the water of Eye-bright, and the juyce of Ground Ivy mixt together. Now I have known many do mistake this ground Ivy, and suppose that the Ivy which is common, and runs along on the ground to be Ground Ivy, but it is not so: for Ground Ivy is a Weed which commonly grows in bottoms of Hedges, by Ditch sides, in good big tufts, it hath a little round rough leaf, and

is jagged on the edges, and of all Simples none is more Sovereain for the eyes.

CHAP. XI.

Another most excellent and approved receipt for any desperate blindness in a Horse or any beast whatsoever.

Take the shells of half a dozen Eggs, and cleanse away the inner film from them so clean as may be, then lay those shells between two clean Tyles, and so lay them in hot glowing Embers, and cover them a'll over, and on every side, and so let them lye a good space till the shells be all dried, then take them up, and beat the shells to fine powder, then searce it through a Laun to fine dust, then with a Goose quill blow this powder into the Horses eye that is offended with Pin, Web, Film, or any thickness or foulness, and it is a certain Cure, and this do morning, noon, and night.

But if it be for any watered or inflamed eye, for any Bruise, Stripe, Lunatick, or descending humours, then take a spoonfull and a half of fine searced powder of white Sugar-Candy, and mix it with the former powder of shells: then with as much May Batter, (if you can get it) or for want thereof the best sweet Butter without Salt, work all into a gentle Salve, and therewith anoynt the Horses Eye morning, noon, and night, for it cleanseth, purgeth, comforeth, and cooleth.

CHAP. XII.

Of the Pearl, Pin, Web, or any spot in a Horses Eye.

The Pearl, the Pin, the Web, or any unnatural Spot, or thick Film over a Horses Eye, proceedeth, for the most part, from some Stroke received: Yet the Pearl, which is a little round, thick, white spot like a Pearl, growing on the sight of the Horses Eye, comes many times from natural causes, and even from descent of Syre and Dam, as I have often found by experience. The sign is, the apparent sight of the infirmity, and the Cure according to the opinion of the most antient Barriers, is, to take six Leaves of ground Ivy, and a branch of Selladine, and

and bray them in a Morter, with a spoonfull or two of Womans Milk, and then strain it through a clean Linnen Cloath, and put it into a Close Glasse, and then drop of it as much into the Horses Eye at a time, as will fill half a Hasel-nut-shell; and it is the fittest to be done at night only. Do this thrice at the least, and for three dayes after keep the Horse as much as may be from any light. Other Farriers use to annoynt the Horses Eyes with the Marrow of Goats Shanks, and Deers Shanks and Rose-water mixt together, or else to wash his Eyes with the juyce of the Berries and Leaves of ground Ivy, or other Ivy mixt with white Wine; and to blow into his Eyes the Powder of black flint, or of Land Oysters: but that Powder must be made so exceeding fine, as by Art of searcing can any ways be brought to pass: And for the taking away of any Film or Pearl, there is no Medicine more Soverain. There be other Farriers which use to take the lean of a Gammon of Bacon, and dry it, and thereof make a Powder, and blow it into the Horses Eye. Others use to take white Ginger made into very fine Powder, and blow it into the Horses Eyes; yet before you do so, if the Web have continued any long time, it shall not be amiss, first to annoynt the Horses Eye with Capons grease. Others use to blow into the Horses Eye, the Powder of Elder Leaves dryed, or else the Powder of mans Dung dryed: or the Powder of a gray Whet-stone mixt with the Oyl of Honey, and put into the Horses Eye: others use to take the yalk of an Egg with Salt burnt and beaten to Powder, and blow into the Horses Eye: Or else the Powder of the Cuttle-bone. Others use to take either Elder Leaves dryed, or Mans Dung dryed, and mix it with the Powder of the shell or bone of the Crab fish, and blow it into the Horses Eye. Others take Tutte beaten to Powder, and with a Quill blow it just upon the Pearl.

Other Farriers use to take (and sure it is not inferiour, but better than any Medicine whatsoever) a good quantity of white Salt, and lapping it round up in a wet Cloath, put it into the fire, and burn it to a red Coal: then taking it forth and breaking it open you shall find in the midst thereof a white Coar as big as a Bean, or Bigger: Then pick out that Coar and beat it to Powder, and mix with it a little white Wine, then after it hath stood a while, take the thickest of that lieth in the bottom, and put it into the Horses eye, and with the thin wash his eye, do thus once a day till the Pearl be consumed.

Others use to take the juyce of Rue, and put it into the Horses eye or else to make a hole in an Egg, and put forth all that is within it, and fill the Shell with Pepper, and closing it in an earthen pot, put it into a hot burning Oven till it be quite hot, then take it forth, and beat the Pepper to powder, and blow thereof into the Horses eye. Others use to take of Pumfistone, of Tartarum, and Salgemma of each like weight, and being beaten into very fine powder, to blow a little of that into the Horses eye, continuing so to do till the eye be well. Others use only to blow the powder of Sondevoire into the Horses eye, affirming that it alone hath sufficient force and vertue to break any Pearl or Web in a very short space, without any other composition: but surely I have found the powder of Flint, and the powder of white Salt burnt, to be much stronger.

CH A P. XIII.

A most excellent and infallible Cure for any Pin, Web, Pearl, or spot in a Horses Eye.

TAKE an Egg, and make a hole in the top, put out half the white, then fill up the empty place with Salt and Ginger finely mixt together, then roast the Egg extreme hard, so as you may beat it to fine powder, having formerly laid it in a wet Cloath, then morning and evening, after you have washt the Horses eye with the juyce of ground Ivy, or Eye-bright water, you shall blow of this powder therein, and it is a certain remedy.

CH A P. XIV.

Of the Haw in a Horses Eye.

THE Haw is a Gristle growing betwixt the nether eye-lid and the eye. It proceeds of gross and tough Flegmy humours, which descending down from the Head, and knitting together, do in the end grow to a Horn or hard Gristle. The signs thereof are a watering of the eye, and an unwilling opening of the nether lid, besides an apparent shew of the Haw it self, if with your Thumb you do put down the

the nether lid of the Horses eye. The Cure is, take a Needle and a double Thred, put it through the tip of the Horses ear, which done, put the Needle likewise through the upper Eye-lid of the Horse upwards, and so draw up the Eye-lid, and fasten it to the Ear, then with your Thumb put down the nether lid, and you shall plainly see the Haw: then thrust your Needle through the edge of the Haw, and with the Thred draw it out, so as you may lap it about your finger, then fasten the Thred about your little finger, to hold it constantly, and then with a very sharp knife cut cross the Gristle of the inside next the Horses Eye, and so separating the skin and the fat from the Gristle, cut the Gristle quite out; then cutting your threds draw them clean out, both of the Eye-lids, and out of the Haw: then wash all the Horses Eye either with Ale, Beer, or white wine, and pluck away all the long hairs from about the Horses Eyes, being sure to leave no blood within the Horses Eye. And in this manner of Cure you must observe, that by no means you cut away too much of the wash or fat by the Haw, or any part of the black that groweth about the end of the Haw, for that will make the Horse blear-eyed. There be other Farriers which use after they have cut out the Haw, to annoint the Eye six dayes after with Sallet Oyl, the Marrow of Sheeps shanks and Salt mixt together.

Others do take the juyce of ground Ivy stampd in a Morter, with the juyce of Ivy berries, and mix them either with water or white Wine, and so Plaister-wise lay it to the Horses Eye, renewing it morning and evening, and it will eat away the Haw. Others use after the Haw is cut away, to lay to the Eye a Plaister of Camomill and of Honey beaten together; and of all which is sufficient enough. Now you are to note by the way, that the Horse which hath one Haw, commonly hath two, for they continually go together.

C H A P. XV.

Of Moon-Eyes, or Lunatick-Eyes.

THe Moon-eyes, or Lunatick-eyes, are of all sore eyes the most dangerous and noysome, and do proceed from hot humours, descending from the head, and stirred up by the extremity of over-riding, or compelling a Horse to do more than nature will give him
leave :

leave: as I have seen a slothfull and heavy Horse brought to be Moon-eyed by the folly of his Rider, who would force him to stand and Trot, contrary to the vigour of his spirit: So likewise I have seen delicate metal'd Horses brought to be Moon-eyed, when the Riders would not temper the freeness of their natures, but have given them leave to run into all violence. Now they be called Moon-eyes, because if the Farrier do observe them, he shall perceivethat at some times of the Moon the Horse will see very prettily, and at some times of the Moon he will see nothing at all. Now the signs hereof are, when the Horses eyes are at the best, they will look yellowish and dim, and when they are at the worst, they will look red, fiery, and angry.

The Cure is, to lay all over the Temples of the Horses head, the plaister of pitch, Rozen, and Mastick, mentioned in the Chapter of watry eyes: then under each of his eyes with a sharp knife make a slit of an inch long about four fingers beneath his eyes, and at least an inch wide of the eye Veins; then with a Cornet loosen the skin about the breadth of a Groat, and thrust therein a round piece of Leather as broad as a two pence with a hole in the midst, to keep the hole open: and look to it once a day, that the matter may not be stopped, but continually run the space of ten dayes; then take the Leather out, and heal the Wound with a little flax dipt in this Salve. Take of Turpentine, of Honey, and of Wax, of each a like quantity, and boyl them together, which being a little warmed, will be liquid to serve your purpose; and take not away the plaisters which are upon his Temples untill of themselves they fall away; which being fallen, then with a small hot drawing Iron make a Star in the midst of each Temple-vein, where the plaisters did lye, which Star would have a hole in the midst, made with the button  end of your hot drawing Iron in this sort

Now there be other Farriers, which instead of the slits under the eye, and the pieces of Leather, which is a plain Rowel, only do take a small blunt hot Iron, and about an inch and an half beneath the nether lid, to burn some five holes all of a row, according to the compass of the Horses eye, and to burn those holes even unto the bone, and then once a day to anoynt them with fresh Grease, or sweet Butter.

C H A P. XVI.

Of the Canker in the Eye.

A Canker in the Eye cometh of a rank and corrupt blood, descending from the Head into the Eye, where it congealeth and breedeth a little Worm in manner as it were the head of a Pismire, which groweth in the nether end of the Horses Eye next to his Noseward: it proceedeth many times into the Gristle of the Nose, which if it chance to eat through, it will then pass into the head, and so kill the horse. The signs hereof are, you shall see red Pimples, some great and some small, both within and without the eye, upon the Eye-lids, and also the eye it self will look red, and be full of very corrupt matter. The Cure, according to the ancient Farriers, is, to take as much burnt Allom as an Hazel Nut, and as much of green Copperas, and bake them both together upon a Tile-stone, and then grind them into Powder, and put thereto a quarter of a spoonfull of Honey, and mix them all together, and then with a Clout dipt therein, rub the sore till it bleed: and do thus seven dayes together, and it will Cure the Canker. There be other Farriers which for this Canker in a Horses eye, will first let the Horse bleed in the Neck-vein of the same side the sore Eye is, and take away to the quantity of a pottle of blood: then take of Roch-Allom, and of green Copperas, of each half a pound, of white Copperas one ounce, and boyl them in three pints of running Water, untill the half be consumed: then take it from the fire, and once a day wash his Eye with this water, being made luke-warm, with a fine Linnen Cloath, and cleanse the eye therewith, so as it may look raw, and do this till the Eye be whole.

C H A P. XVII.

For a Stripe or blow upon a Horses Eye.

IF a Horse shall catch any stripe or blow upon his Eye, either with Whip, Rod, Cudgel, or any such like mischance, or by one Horses biting of another when they either play or fight: Then for
the

the Cure, thereof (if you take it when it is new done) you shall only blow into his eye either the Powder of Sandevoire, or the fine Powder of white Salt, after the Eye hath been wash't with a little Beer; but if the eye be more sore, and have continued longer, then you shall take a small Loaf of Bread, and pull out all the Crums; then fill the Loaf full of burning Coals, untill it be well burned within, then take off that Crust and put it in white Wine, and after it is well soaked lay it to the sore, then take Sope-water and cold water mixt together, and wash all the Eye-brows therewith, and if for all that it go not away, then you shall let him bleed on the Temple-veins; and if he do rub or chafe his eye, you shall let him bleed on the Veins under his Eyes, and wash his eyes with cold Sope-water; but if his Eyes do chance to look red with the blow, then you shall lay unto them a Plaister of red Lead and Sallet-Oyl beaten well together. Others use to take the juyce of Plantain, stamp and mixt with white Wine, and so laid to the sore Eye. Others use both for this Disease, or any other sore eye, to stamp strong Nettles with a little Beer, and then straining it to squirt thereof into the Horses eye, twice or thrice together: then to put of the fine Powder of Sandevoire a little into his Eyes, and then be carefull to keep the Horses Eye from Wind or Cold: but if you must needs ride him, then put a Woollen Cloath before the Horses Eye; also it is not amiss to let him bleed on his Eye-veins, and then twice dressing will be sufficient.

➡ Others Farriers use first to annoynt the sore eye three dayes together with Hens or Capons grease, to mollifie it: then take a little live Honey, and warming it, wipe it into the Horses Eye with a feather. Others take the juyce of Plantain mixt with Honey, or else the juyce of Time mixt with Honey, and put it into the Eye. Others use to take the ashes of an old shooe-sole burnt in an Oven, and put it into the Horses Eye; or else the Powder of a gray Whetstone blown into the sore eye; both are speedy remedies. Others use to take the juyce of Smallage, and of Fennel, and mixing them with the white of an Egg, put it into the Horses Eye once a day till the eye be whole.

C H A P. XVIII.

For a Wart in the Eye.

A Wart in a Horses Eye, is a fleshy excrescion, or a fleshy knot growing either upon the Eye, or upon the edge or inside of the Eye-lids, it proceedeth from a thick Flegm, which descendeth to the eye, by means that the Horse is too much kept in a dark Stable without light: and this infirmity will make a Horses eye consume and grow little. The Cure is, to take Roch Allom, and burn it on a Tile-stone, and then put as much white Copperas thereunto not burnt, and grind them to Powder, then lay some of that Powder just upon the head of the Wart, and do this once a day till the Wart be consumed away.

C H A P. XIX.

For an Inflammation in a Horses Eye.

Horses may diversly have Inflammations in the Eyes; as by long standing in the Stable, with foul feeding and no exercise, or by Moats falling into his eyes, or by rankness of Blood, and such like, any of which will breed an Inflammation or soreness in the eye. The signs are itching and rubbing of the Eyes, and a little swelling, with some loathness to open the Eye-lids. The Cure is, first to let him bleed upon the Temple-veins, and upon the Eye-veins, and then to wash his Eyes in Milk and Honey mixt together. Others after blood-letting, will wash the Horses Eyes with Honey and Aloes Epatica mixt together: And others will wash his Eyes with Aloes dissolved in white Wine, any of which is approved to be most excellent for any sore Eye.

C H A P. XX.

Of the Impostume in the Ear of a Horse.

Impostumes which breed in the Ear of a Horse proceed from divers causes, as from some great blow about the head, or from Wringings with a hard halter, or from some evil humours congealed in the ears by some extreme cold. The signs whereof appear plainly by the burning and painfull swelling of the roots of the ears, and the other parts thereabout. The cure thereof, is first to ripe the Impostume with this plaister: take of Linseed beaten into powder, and Wheat-flower, of each half a pint, of Honey a pint, of Hogs grease, otherwise called Barrows grease, one pound; warm all these things together in an earthen pot, and stir them continually with a flat stick or slice, untill they be thoroughly mingled and incorporated together, and then spread some of this plaister being warm upon a piece of linnen cloth or soft white leather, so broad as the swelling and no more, and lay it warm unto it; and so let it remain one whole day, and then renew it again, continuing so to do, untill it either do break, or else grow so ripe that you may launce it downwards, so that the matter may have passage out, then tent it with this tent of flax dipped in this salve even to the bottom, that is to say, take of Mel rosatum, of Saller oyl and Turpentine, of each two ounces, and mingle them together, and make the horse a biggen of Canvase to cloze in the fore, so as the tent with the oyntment may abide within the sore, renewing the tent once a day untill it be whole: but if the Horse have pain in his ears, without any great pain or Inflammation, then thrust into his ear a little black Wool, dipt in the oyl of Camomile, and that will ease him: but if the Impostume be broken before you perceive it, and that you see matter run from the Horses ears, then you shall take of oyl of Roses, of Venice Turpentine, and Honey, of each will quantity, and mixing them well together, warm it luke-warm upon a few coals, and then dipping black wool therein, thrust it down into the Horses ear that runneth, renewing it once a day till the ear leave running.

C H A P. XXI.

Of the Pole-evil.

THe Pole-evil is a great swelling inflammation, or Aposstume in the nape of the Horses neck, just between his ear, towards his main, and proceedeth sometimes from the Horses struggling or striving in his halter, especially if the halter be of hard new twound Hemp; sometimes it proceedeth from evil humours gathered together in that place, or else from some stripe or blow given to the Horse by some rude Keeper, Carter, or Man of little discretion: for that part being the weakest and tenderest part about the head, is the soonest offended and grieved with Sorances. The signs of this disease is a apparent swelling between the Horses ears, and on each side his neck, which in continuance of time, will break of its own accord, yet doth ever rot more inwardly than outwardly, from whence it comes that this disease is more commonly called of our common and ignorant Farriers, the Fistula in the neck, than the Pole-evil; and in truth it is an Ulcer so hollow and so crooked, and so full of sharp matter, like unto like, that it differeth very little from a Fistula, and is of all Impostumes, except the Fistula it self, the hardest to cure: therefore I would wish every carefull Farrier to take this cure in hand so soon as is possible, that is to say, before it break, if it may be.

Now for the general cure (according to the opinion of the antient Farriers) it is thus: First, if it be not broken, ripe it with a plaister of Hogs grease, laid unto it so hot as may be, and make a biggen for the pole of his head to keep it from cold, which biggen would have two holes open, so as his ears may stand out, and renew the plaister every day once untill that break, keeping the fore place as warm as may be; and if that you see it will not break so soon as you would have it, then look where it is softest, and most meetest to be opened, take a round hot Iron or a Copper Iron (for that is the better) as big as a mans little finger, and sharp at the point, made like an Arrow head, and then about two inches beneath the soft place, thrust it in a good deepness upwards, so as the point of your Cauterizing Iron may come out at the ripest place, to the intent that the

matter may descend downward, and come out at the nether hole, which would alwayes be kept open: And therefore tent it with a tent of flax dipt in hogs greafe warm, and lay also a plaister of hogs greafe upon the same, renewing it every day once for the space of four daies, which is done chiefly to kill the heat of the fire: then at the four dayes end, take of Turpentine half a pound, clean washed in nine sundry waters, and after that thoroughly dried, by thrusting out the water with a slice on the dishes side; then put therunto two yolks of eggs, and a little Saffron, and mingle them well together. That done, search the depth of the hole, either with a quill or a probe, and make a tent of a peice of dry sponge never wet, so long as it may near reach the bottom, and so big as it may fill the wound, and annoint the tent with the afore-said oyntment, and thrust it into the wound either with that quill, or else by winding it up with your finger and thumb by little and little, until you have thrust it home, and then lay on the plaister of hogs greafe made luke-warm, renewing it every day once until it be whole: but if the swelling cease, then you need not use the plaister, but only to tent it; and as the matter decreaseth, so make your tent every day lesser and lesser, until the wound be perfectly cured.

Now if this disease of the Pole-evil have broken of it own self, and by neglecting looking unto, have continued so long that it is turned to a Fistula, which you shall know both by the great and crooked hollownes inwardly, and by a sharp thin water which would issue out there outwardly, then you shall take (according to the opinion of the Farriers) of unslakt Lime, and of Arsnick, of each like quantity, beat them together into very fine powder, ^{put} thereto of the juyce of Garlick, of Onions, and of Wall-wort, of each a like quantity, and of Holly as much as all the rest, boyl them upon a soft fire, and stir them all well together until they be as thick as an Oyntment; then wash the sore with very strong Vinegar, and fill the hole full of the afore-said Oyntment, by dipping a tent therein twice a day; then lay a plaister of Hogs greafe upon the Tent to make it keep in, and use this until the Horse be whole.

Other Farriers use to take Orpiment, unslakt lime, and Verdigrease, of each like quantity, temper them with the juyce of Pellitory, black Ink, Honey and strong Vinegar, of each like quantity,

city, boyl them and stir them well together, untill they be very thick, then make thereof small rouls, and put them into the hollow place of the same sorrhance. Now you are to note, that both these and the last recited salve before this, are only to kill the rankerous and sharp humour which brings the sore unto a Fistula, which as soon as you have killed, which you shall know by the matter which will be white and thick, then you shall heal up the sore either with the powder of Savin, or the powder of honey and lime baked together, or else by annointing it with tarr and sallet oyl, or fresh hogs grease mixt together. There be other Farriers which for this sorrhance do first open the sore with a hot Iron, and then take red lead and black sope, and mixing them well with water till it be good and thick, tent the Horse therewith till he be whole.

Others use to take a quart of water, half a pound of roch allom, four penny-worth of Mercury, a quarter of a pound of Verdigrease, and mixing them well together, wash the horses sore with this water till it begin to dry up, and then heal it with the powders before named. See further in the new Additions for the Fistula, marked thus .

C H A P. XXII.

A true and certain approved Cure for any Pole-evil whatsover.

First shave off the hair from the swelling, then lay on a plaister of black Shoo-makers Wax, spread upon white Allom'd leather, and let it lye till it have ripened and broke the Impostume: then take a pint of Wine vinegar, and when it is boyling hot, mix with it as much clay lome with the straws and all in it, as will bring the vinegar unto a thick poultefs, then apply this as hot as the horse can suffer it to the sore, and renew it once a day till the impostume be whole.  

C H A P. XXIII.

Of a Horse that is Lave-ear'd, and how to help him.

FOR a Horse to be Lave-ear'd, is as foul a disgrace and as much deformity to his beauty, as to want the true proportion and use of any outward member whatsoever. It proceedeth from a natural infirmity, and is ingendred even from the first conception, and although few of our Farriers either have endeavoured themselves, or know how to help it; yet there is nothing more certain than that in this sort it may be cured. First, take your horses ears, and place them in such manner as you would have them stand, and then with two little boards, or pieces of Trenchers three fingers broad, having long strings knit unto them, bind the ears so fast in the places where they stand, that by no means or motion they may stir, then betwixt the head and the root of the ear, you shall see a great deal of empty wrinkled skin, which with your finger and your thump you shall pull up, and then with a very sharp pair of Sizers you shall clip away all the empty skin close by the head: then with a needle and red silk you shall stitch the two sides of the skin close together, and then with a salve made of Turpentine, Deers suet, and Honey, of each like quantity melted together, and made into an ointment, heal up the sore; which done, take away the splents which held up his ears, and you shall see within a short time that his ears will keep the same place still as you set them, without any alteration: And this you shall ever find to be as certain and true, as the healing of a cut finger.

C H A P. XXIV.

Of the Vives or hard Kirnels between the Chaps and the Neck.

THE Vives are certain great Kirnels which grow from the root of the Horses ears, down to the lower part of his nether jaw, between the chap and the neck, they are in proportion, long, narrow and round, and are natural things, proper and due to every Horse: but when either through rankness of blood, or abundance of corrupt humours

humours resorting to that place, they begin to be inflamed, then they become very foul Sorrances and Impostumations most dangerous: they are inwardly very full of little white salt Kirnles, and they breed great pain in the Horses throat. This disease as far forth as I can find by any demonstration, is the disease which in men we call the Squinancie, or Quinzie, and not as some of the old Farriers suppose, the Strangle, for that hath no coherence with the infirmity. For the signs of the disease, there needs small repetition, insomuch as the grief is apparent to the eye: and the cure, according to the opinion of the oldest Farriers, is thus; If you see the Kirnles begin to ranke and swell, you shall take the Horses ear, and laying it down alongst the neck of the Horse, at the very end or tip of the ear, cut a hole through the skin of the neck, the length of an Almond, or better; and then with a crooked Wire, pick our all those Kirnles which you find inflamed: Which done, fill the hole full of Salt: then about the end of three dayes, you shall find the sore begin to matter: then wash it either with bark water, or with the juyce of Sage: then take of Honey, of sweet Butter, and of Tar, of each half a spoonfull, and melt them together, and as soon as you have washt the sore clean, put into it of this oyntment the quantity of a bean, and so dress the Horse once a day until it be whole.

There be others of our most ancient English Farriers, which for this Sorrancc use first to draw the sore right down in the midst with a hot Iron from the root of the ear, so far as the tip of the ear will reach, being pulled down, and under the root again draw two strikes on each side, like an Arrow head in this form:  then in the midst of the first Line, launce them with a Launcet, and taking hold of the kirnles with a pair of fine thin Pinsons, pull them so far forwards as you may cut the Kirnles out without hurting the vein: that done, fill the hole with salt, and heal it up as is afore said. Now most of the Italian Farriers use this cure: First, take a sponge steeped well in strong Vinegar, and bind it unto the sore place, renewing it twice a day untill the Kirnles be rotten: That done, launce it then in the nethermost part, where the matter lyeth, and let it out, and then fill up the hole with salt finely brayed, and the next day wash all the filth away with warm water and a sponge, and then annoyne the place with Honey and Fitch flower mixt together; but in any case

case beware, during this cure, you touch not the Kirnels with your bare finger, for fear of venoming the place, which is very apt for a Fistula to breed in. Now there be other English Farriers, which use either to ripen the sore by laying to a plaister of hot hogs grease, or a plaister of Barley meal mixt with three ounces of Raisons, sod well together in strong Wine; or else they cut out the Kirnels. Now whether you cut them out, burn them out, or rot them out, (of all which I hold rotting the best,) you shall ever fill the hole with nettles and salt being chopt and mixt together, or else tent it with tents dipt in water and mixt with salet oyl and salt. Others use to burn them downwards with a hot iron in the middest, from the ear to the Jaw bone, drawing two cros stroaks, and then launch it in the middest, and pluck out the Kirnels, and fill the hole with bay Salt, and the crops of nettls well chopt and mixt together: or else put only Salt into the hole, and take the crops of nettles well chopt and mixt with bay Salt, and two spoonfull of strong vinegar, and strain it, and put in either ear a spoonful thereof, and put some black wool after it, and so bind up his ears.

Others use to ripen them, either by laying to the sore wet hay, or wet horse litter: And as soon as they are ripe, (which you shall know by the softness) to launch the skin, and take out the Kirnels, and then fill the hole with the powder of honey and unslaked lime mixt together, and burnt upon a Tile-stone. Others use likewise after the Kirnels are ripened and taken out, to take of Agrimony, Honey, and Violet leaves, of each like quantity, and stamping them well together, to plaister the sore therewith, till it be whole. Others use after the Kirnels are taken out, to wash the sore with Copperas Water, and then to tent the hole with flax dipt in the white of an Egg, and after to heal it with Wax, Turpentine, and Hogs grease molten well together.

C H A P. XXV.

A more rare and certain approved Medicine, which will cure the Vives, without either burning, melting, rotting, or any such violent extremity.

Take a peny-worth of Pepper beaten to fine powder, of Swines grease one spoonful, the juyce of a handful of Rue, of vinegar two spoonful, mix them all well together, and put it equally into both the horses ears, and tye them up with two strings, or else stich them together: Then shake the ears that the Medicine may sink downwards: Which done, you shall let the Horse bleed in the neck-vein, and in the temple-veins. And this cure is infallible. 

C H A P. XXVI.

Another cure for the Vives, most certain and approved.

IF in any of the former receipts you can find either difficulty or doubt, then to make certain and speedy Work: first, shave off the hair from the sweld place, and then clap upon it a plaister of Shoo makers Wax, and remove it not till the sore break, then renew the plaister and it will both heal and dry it.

C H A P. XXVII.

Of the Strangle.

THE Strangle (howsoever our old Farriers make a long discourse thereof) is not (as they suppose) a kind of Quinzy, but a mean inflammation of the throat, proceeding from some Choleric or bloody fluxion, which comes out of the branches of the Throat veins into those parts, and there breedeth some hot inflammation, being stirred up either by some great Winter cold, or cold taken after Labour: It is a great and a hard swelling between the Horses nether chaps, upon the roots of the Horses tongue, and about his throat, which swelling, if it be not prevented, will stop the horses

windpipe, and so strangle or choak him: from which effect, and none other, the name of this disease took his derivation. The signs of this disease, besides the apparent sign thereof, and the palpable feeling of the same, is, the Horses temples of his head will be hollow, and his tongue will hang out of his mouth, his head and eyes will be swoln, and the passage of his throat so stoppt, that he can neither eat nor drink, and his breath will be exceeding shorr. The cure thereof, according to the most antient Farriers, is, with a round small hot Iron to thrust a hole through the skin on both sides the westand, and then after it beginneth to matter, to mix butter, Tanners water, and Sale together, and every day annoynt the sore therewith till it be whole. Others of the ancient Farriers use first to bathe the Horses mouth and tongue with hot water, and then annoynt the sore place with the gall of a Bull, that done, give him this drink. Take of old Oyl two pounds, of old Wine a quart, nine Figs, and nine Leeks heads well stamped and brayed together, and after you have boyled these a while, before you strain them, put unto them a little Nitrum Alexandrinum, and give him a quart of this every morning and evening. Also you may if you will, let him blood in the Palate of the mouth, and pour wine and oyl into his Nostrils, and also give him to drink the decoction of Figs and Nitrum sodden together, or else to annoynt his throat within with Nitre, Oyl, and Honey, or else with honey and hogs dung mixt together. Other Farriers use to rowel the horse under the throat, and to draw the Rowel twice or thrice a day, annoynting it with fresh butter, and keeping his head warm. Other of our later and better experienced Farriers, use first, (if his years will permit him) to let the Horse blood in the Neck-vein, then to lay to the sore this ripening plaister: Take of Mallows, Linseed, Rue, Smalage and ground Ivy, of each like quantity, boile these together in the grounds of Beer: then put to it some Oyl de Bay, and a little Dia Althea, then take it off the fire, and make of it a plaister, and lay it to the sore, suffering the horse to drink no cold water: after the sore is broken, lay bran steeped in Wine unto it, till it be whole. Others use to cut the kirkels out between the jaws, and then to wash the sore with butter and beer, giving the horse to drink new milk and garlick, and the juyce of the leaves of Birch, or in winter the bark of Birch, or else to annoynt it with tar and oyl till it be whole. Now, for mine own part, the best cure that ever I found for the Strangle, was this.

As soon as I found the swelling begin to arise between his chaps, to take a Wax-candle, and holding it under the Horses chaps, close unto the swelling, burn it so long till you can see the skin be burnt through, so that you may as it were raise it from the flesh; that done, you shall lay unto it either wet hay, or wet horse litter, and that will ripen it, and make it break: then lay a plaister unto it only of Shoemakers Wax, and that will both draw and heal it. Now if it break inward, and will not break outward, and so avoideth only at his Nose, then you shall twice or thrice every day, perfume his head by burning under his nostrils, either Frankincense or Mastick, or else by putting a hot coal into wet hay, and so making the smoak thereof to ascend up into the Horses head: or else to blow the powder of Euforbium, with a quill into his nose; and so note that whatsoever cureth the Vives, cureth the Sirangle also.

C H A P. XXVIII.

Of the Cankerous Ulcer in the Nose.

THat which we call the Cankerous Ulcer in the Nose, is only a fretting humour, eating and consuming the flesh, and making it all raw within, and not being holpen in time will eat through the Gristle of the nose. It commeth of corrupt blood, or else of a sharp hunger ingendred by means of some extreme cold.

The signs are the horse will oft bleed at the nose, and all the flesh within his nose will be raw, and filthy stinking savours, and matter will come out at the nose.

The cure thereof, according to the ancient Farriers, is: Take of green Copperas and of Allom of each a pound, of white Copperas one quartern, and boyl these in a pottle of running water untill a pint be consumed: then take it off, and put thereunto half a pint of honey, then cause his head to be holden up with a drenching staff, and squirt into his nostrils with a squirt of Brais or Pewter, some of this water being luke-warm, three or four times one after another; but betwixt every squirting give him liberty to hold down his head, and to snort out the filthy matter: for otherwise perhaps you might choak him: and after this it shall be good also without holding up his head any more, to wash and rub his nostrils with a

fine clout bound to a sticks end and dipt in the fore-said water, and do thus once a day untill the Horse be whole. Other Farriers use if they see this Canker to be of great heat, and burning in the fore with exceeding great pain, then you shall take the juyce of Purslane, Lettice, and Nightshade, of each like quantity, and mix them together, and wash the sore with a fine cloth dipt therein, or else squirt it up into his nostrils, and it will allay the heat.

Others take of Hyssope, Sage, and Rue, of each a good handful, and seeth them in urine and water to the third part of them: then strain them out, and put in a little white Copperas, Honey, and Aquaviæ, and so either wash or squirt the place with it; then when the Canker is killed, make this water to heal it: Take of Rib-wort, Betony, and Daisies, of each a handful: then seeth them well in Wine and Water, and wash the sore three or four times a day therewith untill it be whole. Others use also to take Chrystal, and beating it into fine powder, to strow it upon the Canker, and it will kill it.

C H A P. XXIX.

Of Bleeding at the Nose.

MAny horses, (especially young horses) are oft subject to this bleeding at the Nose, which I imagine proceedeth either from the much abundance of blood, or that the vein which endeth in that place is either broken, fretted or opened. It is opened many times by means that blood aboundeth too much, or that it is too fine, or too supple, and so pierceth through the vein. Again, it may be broken by some violent strain, cur, or blow; And lastly, it may be fretted and gnawn through by the sharpness of the blood, or else by some other evil humour contained therein. The cure is, according to the ancient Farriers, to take the juyce of the roots of Nettles, and squirt it up into the horses nostrils, and lay upon the nape of the horses neck a wad of Hay dipt in cold water, and when it waxeth warm, take it off, and lay on a cold one. Other Farriers use to take a pint of red Wine, and put therein a quartern of Bole-armonick beaten into fine powder, and being made luke-warm, to pour the one half thereof the first day into his Nostril that bleedeth, causing his head

head to be holden up, so as the Wine may not fall out, and the next day to give him the other half.

Others use to let the Horse bleed on the breast-vein, on the same side that he bleedeth, at several times: then take of Frankincense one ounce, of Aloes half an ounce, and beat them into fine powder, and mingle them thoroughly with the whites of three Eggs until it be as thick as honey, and with soft Hares hair thrust it up into his nostrils, filling the hole full of Ashes, Dung, or Hogs dung, or Horses dung mixt with Chalk and Vinegar.

Now for mine own part, when none of these will remedy or help, (as all have failed me at some times,) then I have used this, take two small whip-coards, and with them garter him exceeding hard about some ten or twelve inches above his knees of his fore-legs, and just beneath his elbows, and then keep the nape of his neck as cold as may be, with moist cloaths, or wet hay, and it will staunch him presently.

CHAP. XXX.

Of the bloody rifts, or chops in the palat of the Horses mouth.

THese Chops, Clefts, or Rifts, in the palat of a Horses mouth, do proceed (as some Farriers suppose,) from the eating of rough Hay, full of whins, thistles, or other prickling stuff, provender full of sharp seed, which by continual pricking and fretting the furrows of the mouth, do cause them to rankle, swell, and breed corrupt blood and stinking matter, and without speedy prevention, that Ulcer will turn to the foulest Canker.

The Cure thereof is, (according to the opinion of the ancient Farriers) to wash the sore places very clean with Salt and Vinegar mixt together, then to anoynt it with Honey and Allom mixt together. Other Farriers use (especially if the palat be much swelled,) to prick the roof of the mouth with a hot Iron, that the humours may issue out abundantly, and then to anoynt the place with Honey and Onions boyled together, till they be whole.

C H A P. XXXI.

Of the Giggs or Bladders in a Horses mouth.

THese Giggs, Bladders, or Flaps in a Horses mouth, are little soft swellings, or rather pustules with black heads, growing in the inside of the Horses lips, next under his great jaw-teeth: they will sometimes be as great as a Wal-nut, and are so painful unto him, that they make him let his meat fall out of his mouth, or at least keep it in his mouth unchawed, whereby the Horse can in no wise prosper: they do proceed either of eating too much grass, or naughty rough pricking Hay or Provender, they are most apparently to be felt: and the Cure is, (according to the opinion of the oldest and most experienced Farriers) first to draw out the Horses tongue of the one side of his mouth, and then take a Lancet and slit the swellings the length of a Date, and then with a Probe pick out all the Kirnels like Wheat corns very clean: then take the yolk of an Egg, and as much salt as will temper it thick like leaven: then make it into little Balls, and thrust into every hole, and fail not to do so once a day untill it be whole.

Other Farriers use after they have slit them with an incision Knife, and thrust out the corruption, only to wash the sore places either with Vinegar and salt, or else with Allom water. Others use with a small hot Iron to burn the swellings, and then wash them with Beer and Salt, or Ale and Salt, and it will heal them. Now that you may prevent this Disease before it come, it shall be good to pull out the Horses tongue often, and to wash it with Wine, Beer, and Ale, and so shall no Blisters breed thereon, nor any other Disease.

C H A P. XXXII.

Of the Lampas.

THe Lampas is a swelling or growing up of the flesh, which over-groweth the upper teeth, which are the shears in the upper chap, and so hindreth the Horse from eating. They do proceed

ceed from abundance of blood, resorting to the first Furrow or bar of the mouth, I mean that which is next to the upper fore-teeth; it is most apparent to be seen, and therefore needeth no other signs. The cure is, (according to the custom of the oldest Farriers,) first with a Lancer to let him bleed in divers places of the swelling flesh: then take an Iron made at one end broad and thin, and turned up according to this Figure, and heating it red hot, burn out all that superfluous swelled flesh which overgrows the fore-teeth, and then annoynt the sore place with fresh butter until it be whole. Others use after it is burnt out, only to rub the sore place with Salt only, or wash it with Salt and Vinegar till it be whole. Others use to take a hooked Knife made very sharp and very hot, and therewith cut the swoln places in two parts, cross against the teeth; but if they be a little swelled, then cut but the third rank from the teeth, and so let him bleed well: then rub it with a little Salt, and the Horse will be well: but if you find afterwards that either through too much burning, or cutting, or through the eating of too coarse meat, that the wound doth not heal, but rather rankle, then you shall take a Saucer full of honey, and twelve pepper-corns, and bray them together in a mortar, and temper them up with Vinegar, and boyl them a while, and then once a day annoynt the sore therewith till it be whole.

C H A P. XXXIII.

Of the Camery, or Frounce.

The Camery, or Frounce in Horses, are small Pimples, or warts in the midst of the palat of the mouth above, and they are soft and sore, they will also sometimes breed both in his Tongue and in his Lips: it proceedeth sometimes from the eating of frozen grass, or by drawing frozen dust with the grass into their mouths: sometimes by eating of moist hay, that Rats or other Vermine have piss upon, and sometimes by licking up of venom. The signs are, the apparent seeing of the pimples, or wheelks, and a forsaking of his food, both through the soreness of them, and through the unflavouriness and rankness of the food that he hath eaten before.

The Cure (according to the opinion of the oldest Farriers) is, first

first to let him blood in the two greatest veins under his tongue, and then wash all the sore places with vinegar and Salt: Then get the Horse new bread, which is not hot, and give it him to eat, and the Horse will do well enough. But take heed you give but a small quantity of such bread for fear of Surfeit, which is both apt and dangerous.

Others use with a hot Iron to burn the pimples on the head, and then wash them with Wine and Salt, or Ale and Salt untill they bleed, and they will soon heal. Other Farriers use to take out his tongue, and to prick the veins thereof in seven or eight places, and likewise under his upper Lip also, and let him bleed well: then rub every sore place with Salt well: then the next day wash all the sore places with white Wine warm, or else with strong vinegar, and rub it again with Salt: then for two or three dayes let the Horse drink no cold water, and he will do well.

C H A P. XXXIV.

Of the Canker in the month.

A Canker is said of the ancient Farriers to be nothing but the rawness of the mouth and tongue, which is full of very sore blisters, from whence will run a very hot and sharp lye, which will fret and corrode, or rot the flesh wheresoever it goeth. The signs are, the apparent sight of the sore, besides the forsaking of his meat, because he cannot swallow it down, but lets it lye half chewed between his jaws, and sometimes when he hath chewed his meat, he will thrust it out of his mouth again, and his breath will savour very strongly, chiefly when he is fasting.

This disease proceedeth oftent from some unnatural heat coming from the stomach, and sometimes from the venom of filthy food.

The Cure is (as the oldest Farriers instruct us) to take of Allom half a pound, of Honey a quarter of a pint, of Collumbine leaves, of Sage, of each a handful, boyl all these together in three pints of running Water, untill one pint be consumed, and wash all the sore places therewith, so as they may bleed, and do thus once every day untill it be whole. Other Farriers use first to cast the Horse, and with a rolling pin to open his mouth, then with a crooked Iron

wrap

wrapt about with Tow or Flax, to take out all the stinking grasse, or other meat that lyeth in his jaws, and under the root of his tongue: then when you have cleansed it thus, you shall heat strong wine Vinegar somewhat warm, and then with the same Iron wrapt in Tow, and dipt in wine Vinegar, you shall wash all the sore places till they bleed: then wash all his tongue and lips with the same Vinegar, and so let him rise: and then feed him at least seven dayes with warm Mashcs and hot grains: but in no wise with any hay, and he will soon be whole.

Other Farriers use to take of the juyce of Daffodil-roots seven drams, of juyce of Hounds-tongue as much, of Vinegar as much, of Allom one ounce: mix these well together, and wash the Canker therewith once a day until it be whole. Others use to take of Savin, of Bay-salt, and of Rue, of each like quantity, and stamp them together with as much Barrows grease, and annoint the sore places therewith until the Canker be killed, which you may know by the whiteness, and then healing it up only with Allom water.

Others use first to wash the Canker till it bleed with warm Vinegar, to take a good quantity of Allom beaten into very fine powder, and to mix it with strong Vinegar till it be as thick as a Salve: then to annoint all the sore places therewith, and do not fail thus to do twice or thrice a day until the Canker be whole.

Now for mine own part, the best Cure that ever I found for this Sorrance, is, to take of Ginger and of Allom, of each like quantity, made into very fine powder: then with strong Vinegar to mix them together till they be very thick like a Salve, then when you have washed the Canker clean, either with Allom water, or with Vinegar, annoint it with this Salve, and in twice or thrice dressing, the Canker will be killed, and after it will heal speedily.

C H A P. XXXV.

Of heat in the mouth and lips of a Horse.

THe unnatural and violent heat which ascendeth up from the stomach into the mouth, doth not alwayes breed a Canker, but sometimes only heateth and inflamech the mouth and lips,

D d

making

making them only swell and burn, so as the Horse can take no joy in his food, but through the grief refuseth his meat. The cure thereof is, first to turn up his upper lip, or that which is most swelled, and with a Lancet jag it lightly, so that it may bleed, and then wash both that and all his mouth and tongue with Vinegar and Salt.

C H A P. XXXVI.

Of the Tongue being hurt with the bit, or otherwise.

IF the tongue of a Horse be either hurt, cut, or galled by any accident or mischance whatsoever, the best Cure is (as the oldest Farriers suppose) to take of English honey, and of salt Lard, of each like quantity, a little unsleckt Lime, and a little of the powder of Pepper: boyl them on a soft fire, and stir them well together till they be thick like unto an Oyntment: then wash the Wound with white Wine warmed: after that, annoint the wound with the said oyntment twice a day, and by no means let the Horse wear any bit till he be whole.

Other Farriers use first to wash the sore with Allom water, and then to take the leaves of a black bramble, and to chop them together small with a little Lard; that done, to bind it with a little clout, making it round like a ball: Then having dipped the round end in honey, to rub the tongue therewith once a day until it be whole.

C H A P. XXXVII.

Of the Barbes or Pappes underneath a Horses tongue.

THe Barbes are two little paps which naturally do grow under every Horses tongue whatsoever, in the nether jaws: yet if at any time they shoot out, and grow into an extraordinary length, or by the over-flow of humours become to be inflamed, then they are a Sorrhance, and with the extremity of their pain, they hinder the Horse from feeding. The cure of them is, both according to the opinion of the ancient and late Farriers, absolutely to clip them away.

away with a pair of shears close to the jaw, and then to wash the fore either with water and salt, or else with Tartar and strong vinegar mixt together, or else with vinegar and salt. Any of all which will heal them.

C H A P. XXXVIII.

Of the pain in a Horses teeth, of Wolfs teeth, and jaw-teeth.

A Horse may have pain in his teeth through divers occasions, as partly by the descent of gross humours from the head down unto the teeth and gums, which is very proper to Colts and young Horses, and plainly to be seen by the rankness and swelling of the gums; and also he may have pain in his teeth, by having two extraordinary teeth, called the Wolfs teeth, which be two little teeth growing in the upper jaws, next unto the great grinding teeth, which are so painful to the Horse, that he cannot indure to chew his meat, but is forced either to let it fall out of his mouth, or else to keep it still half chewed. Again, a Horse will have a great pain in his teeth, when his upper jaw-teeth be so far grown, as they over-hang the nether jaw-teeth; and therewith also be so sharp, as in moving his jaws, they cut and raze the insides of his cheeks, even as they were razed with a Knife. Last'y, a Horse may have great pain in his teeth, when either by corruption of blood, or some other natural weakness, the Horses teeth grow loose and sore, in such manner, that through the tenderness thereof, he is not able to chew or grind his food. Now for the several Cures of these infirmities, you shall understand, that first as touching the general pain in a Horses teeth, which do come by means of the distillation of humours, it is thought fit by the ancientest Farriers, first to rub all the outside of the Horses gums with fine Chalk and strong Vinegar well mixt together.

Other ancient Farriers use after they have so washed the gums, to strow upon them the powder of Pomegranate Pills, and to cover the temples of the head with the plaister of Pitch, Rozen, and Mastick molten together, as hath been before sufficiently declared.

Now for the Cure of Wolfs teeth, or the jaw-teeth (according to the opinion of the ancient Farriers) it is thus. First, cause the

Horses head to be tyed up high to some post or rafter, and his mouth to be opened with a board so wide, that you may easily see every part thereof: Then take an instrument of Iron, made in all points like unto a Carpenters Gouge, and with your left hand set the edge of the tool at the foot of the Woolfs-teeth, on the outside of the jaw, turning the hollow side of the tool downwards, holding your hand steadily, so as the tool may not slip nor swerve from the aforesaid teeth: Then, having a mallet in your right hand, strike upon the head of the tool a good stroak wherewith you may loosen the tooth, and make it bend inward, then straining the midst of your tool upon the Horses nether jaw, wrinch the tooth outward with the inside or hollow side of the tool, and thrust it clean out of his head; Which done, serve the other Woolfs teeth on the other side in like manner, and then fill up the empty holes with Salt finely brayed.

Other ancient Farriers use, (and I have in mine experience found it the better practice) only when the Horse is either tyed up or cast, and his mouth opened, to take a very sharp file, and to file the wolfs teeth so smooth as is possible, and then wash his mouth with a little Allom water. Now if the upper jaw-teeth over-hand the nether jaw-teeth, and so cut the inside of the mouth as is aforesaid, then you shall take your former tool or gouge, and with your Mallet strike and pare all those teeth shorter by little and little degrees, running alongst them even from the first unto the last, turning the hollow side of your tool towards the teeth, by which means you shall not cut the insides of the Horses Cheeks: then with your file, file them all smooth without any raggedness, and then wash the Horses mouth with Vinegar and Salt. Lastly, if the pain do proceed from the looseness of the teeth, then the Cure is, according to the opinion of the ancient Farriers, first to cast the Horse, and prick all his Gums over with a Lancet, making them bleed well, then rub them all over with Sage and Salt, and it will fasten them again.

Ochers use to let the Horse Blood in the vein under the Tail, next the Rump, and then to rub all his Gums with Sage, and to give him in his provender, the tender crops of black briers: or else wash all his mouth with Honey, Sage, and Salt beaten together, and by no means let the Horse eat any moist meat, for cold, moist, and

and marriſh feeding in the Winter, only breedeth this diſeaſe of looſeneſs in the teeth, and it is of all other, moſt proper to the Sorrel Horſes.

C H A P. XXXIX.

Of diſeaſes in the neck and Withers, and firſt of the crick in the neck.

THe Crick in the neck of the Horſe, is, when he cannot turn his neck any way, but holds it ſtill right forth, in ſo much that he cannot bow down his head to take up his meat from the ground, but with exceeding great pain; and ſurely it is a kind of convulſion of the ſinews, which proceedeth from cold cauſes, of which we have ſpoken very ſufficiently before, it alſo proceedeth ſometimes from over-heavy burthens that be laid upon a Horſes ſhoulders, or by over-much drying up of the ſinews of the neck. The Cure thereof, according to the opinion of the ancient Farriers, is, firſt to thruſt a ſharp hot Iron through the fleſh of the neck in five ſeveral places, every one diſtant from the other three inches, (but in any caſe beware of touching any ſinew) then rowel all the aforeſaid places either with Horſe hair, flax, or hemp, for the ſpace of fifteen dayes, and annoynt the rowels with Hogs greaſe, and the neck will ſoon be reſtored. Others uſe if the crick cauſeth the Horſe to hold his neck ſtraight forward, which ſheweth that both ſides are equally perplexed, to take a hot drawing Iron, and draw the Horſe from the root of the ear, on both ſides the neck, from the miſt of the ſame, even down the breaſt, a ſtraw deep, ſo as both ends may meet on the breaſt: then make a hole through the ſkin of the fore-head, hard under the fore-top, and thruſt in a cornet upward betwixt the ſkin and the fleſh, a handful deep: then either put in a Goole feather doubled in the miſt, and annoynted with Hogs greaſe; or elſe a rowel of either Horn or Leather, with a hole in the miſt: any of which will keep the hole open, to the intent the matter may iſſue forth: And this you ſhall keep open the ſpace of ten dayes, but every day during the time, the hole muſt be cleaned once, and the feather or rowel alſo cleaned, and freſh annoynted, and put in again: and once a day let him ſtand upon the
bit

bit an hour or two, or else be ridden abroad two or three miles, by such an one as will beat the Horses head, and make him bring it in: but if the crick be such that it maketh the Horse to hold his head awry upon the one side, which sheweth that but one side of the neck is troubled, then you shall not draw the Horse with an hot Iron on both sides of the neck, but only on the contrary side, as thus: If he bend his head towards the right side, then to draw him, as is aforesaid, only on the left side, and to use the rest of the Cure as is above said, and if necessity do require, you may splent the Horses neck also straight with strong splents of wood.

I have Cured this Crick in the neck only by bathing the Horses neck in the oyl of Peter, or the oyl of Spike very hot, and then roling it all up in wet Hay, or rotten Litter, and keeping the Horse exceedingly warm, without using any burning, wounding, or other violence.

C H A P. XL.

Of the Wens in the neck.

A Wen is a certain Bunch or Kirnel upon the skin, like a tumor or swelling: the inside whereof is sometimes hard like a Gristle, and spongius like a skin full of soft Warts; and sometimes yellow like unto rusty Bacon, with some white grains amongst. Now of Wens, some are great, and some be small, also some are very painful, and some not painful at all. They proceed, as some imagine, of naughty, gross, and flegmatick humors, binding together in some sick part of the body. And others say, they proceed from taking of cold, or from drinking of waters that be most extreme cold; but I say, that albeit, they may proceed from these causes, yet most generally they proceed from some pinching, bruising, biting, ripping or galling, either of girths, halter, collar, or any other thing whatsoever.

The certainest Cure thereof is this, take of Mallows, Sage, and red Nettles, of each one handful: boyl them in running waters and put thereunto a little butter and honey, and when the herbs be soft take them out, and all to bruise them, and put thereunto of Oyl de Bay two ounces, and of Hogs grease two ounces, and warm them together over the fire, mixing them well together: that done, plaister it upon a piece of Leather, so big as the Wen, and lay it to

so hot as the Horse can endure it, renewing it every day in such sort the space of eight dayes, and if you perceive it will come to no head, then launce it from the midst of the Wen downward, so deep that the matter in the bottom may be discovered and let out: which done, heal it up with this Salve: Take of Turpentine a quartern, and wash it nine times in fair water, then put thereunto the yolk of an Egg, and a little English Saffron beaten into powder, and make a tent or role of flax, and dip it in that oyntment, and lay it to the sore, renewing the same every day once or twice, until the Wen be cured.

Others use in this case, with a hot Iron to burn and sear away all the superfluous flesh, and then to heal up the sore either with the Oyntment last rehearsed, or else with the powder of Honey and Lime mixt together; and this manner of Cure is by much the speedier.

C H A P. XLI.

Of swelling in the neck after blood-letting.

THe swelling of a Horses neck after blood-letting may come, through divers occasions, as namely, by striking through the vein, so as some of the blood being gotten betwixt the flesh and the vein it there corrodeth and turneth to an impostume, or else by striking the vein with a rusty fleagm, whereby the vein rankleth, or by some cold wind striking suddenly into the hole, or lastly, by suffering the Horse too soon to thrust down his head, and stale or feed, whereby humours resorting to that place, breeds a great Impostumation: The Cure is, according to the opinion of some Farriers, to take Hemlock and stamp it, and then to mingle it with Sheeps dung and wine Vinegar, and to making a plaister thereof to lay it to the swelling, renewing it once a day until it be whole. Other Farriers use first to annoint the place with the Oyl of Camomile warmed, and then to lay upon it a little hay wet in cold water, and bind it about with a cloath, renewing it every day for the space of a week, to see whether it will grow to a head, or else vanish away; if it grow to a head, you may then launce it, and thrust out the matter.

matter: then heal it up by tenting it with flax dipt in Turpentine and Hogs greafe molten together, dressing it once a day until it be whole.

C H A P. XLII.

How to stanch blood.

IF your Horse either by wound or other accident, or by the ignorance of any unskilful Farrier that lettech him blood when the sign is in that place, bleedeth so exceedingly that he will not be stanch'd, you shall then according to the opinion of old Farriers, lay unto the wound a little new Horse dung tempered with Chalk and strong Vinegar, and not to remove it from thence the space of three dayes: or else to lay unto it burnt silk, burnt felt, or burnt cloath, any of which will stanch blood. Others use to pour into the wound the juyce of Coriander, or else to let the Horse chew in his mouth the leaves of Periwinkle. Others use to take of bruised Nettles, and lay them to the wound: or else wild Tansey bruised, or hot Hogs dung. Others use to take bruised Sage and lay to the wound: or else the coame about the Smiths forge: or else a clod of earth, or bruised Hyssop: or the soft crops of Hawthorn bruised: or else to take two ounces of the Horses blood, and boil it till it come to a powder, and then put that powder into the wound.

But when all these fail, as in some extremities I have found them do; then for your only refuge, you shall take the soft down either of Hares skin, or of a Conies skin, and stop the wound well therewith, holding it to with your hand till the blood stanch: if it be a grievous sore wound, then as soon as the blood is staked, spread a plaister of Bole-armonick and wine Vinegar mixt over the wound.

C H A P. XLIII.

Of the falling of the Crest.

THe falling of the Horses Crest, is, when the upper part of a Horses neck which is called the Crest, leaneth either to the one or the other side, and will not stand upright as it ought to do. It proceedeth most commonly from poverty and very hard keeping, and especially when a fat Horse falleth away suddainly upon any inward sickness. The Cure (according to the oldest Farriers) is, First to draw his Crest well a full straws breadth deep on the contrary side with a hot Iron, the edge of which Iron would be half an inch broad, and make both your beginning and ending somewhat beyond the fall, so as the first draught may go all the way hard upon the edge of the main, close by the roots of the same, bearing your right hand down-ward into the neck-ward: Then answer that with another draught beneath, and so far distant from the first, as the fall is broad, compassing as it were all the fall: but still on the contrary side, and betwixt those two draughts, right in the midst, draw a third draught: then with an Iron button of almost an inch about, burn at each end a hole, and also in the spaces betwixt the draughts, make civersholes distant three fingers one from another, as this figure doth plainly shew you. That done, to kill the fire, annoint it every day once with fresh butter for a week or more: Then take of Mallows and of Sage, of each one handful, boyl them well in running water, and wash the burning away till it be raw flesh, and then dry it up with the powder of Honey and Lime.

Other Farriers use for this infirmity, first to cast the Horse upon some soft Dung-hill, or other easie place, and with a Knife to cut away the flesh on the hanging or under side of the Crest, even from the fore-end thereof to the hinder end, six inches broad and two inches thick, or somewhat more in the middle thereof where it is thickest: then groping the Crest with your hands, to pare the

thickest part thereof, till it come all to one thinness, then holding the Horse still fast bound, to cover all the place with great handfuls of Swines dung prepared for the purpose, and hold it to the sore place an hour together, until the blood be stanch'd: Then let the Horse arise, and lead him into the Stable, tying him in such sort, that he may neither rub his neck nor lye down: then the next morning take good store of burnt Allom beaten to powder, and strow it all over the sore place, and so let him stand for two dayes after without any stirring, lest the wound should bleed again: then at the end of these two dayes you shall bathe the sore gently with a fine Linnen cloath, dipt in warm Urine, and then drying the sore, again throw more burnt Allom upon it, and after annoint all about the out-side of the edges of the sore with Unguentum Album Camphoratum, more than an inch broad: thus you shall dress him every day once on that side of the Crest which did fall: then for the contrary side you shall draw his main thereon, and plat it in many plats: which done, you shall ro those plats with thongs of Leather, fasten a cudgel of a foot and a half long: then to the middest of that cudgel you shall hang a piece of Lead with a hole in it, of such weight as will poize the Crest up even, and hold it in his right place: then shall you draw his Crest on that side the weight hangs with a hot drawing Iron, even from the top of the Crest, down to the point of the shoulder, making divers stroaks one an inch and an half from another: Then shall you lay upon the burnt places a plaister of Pitch, Tar, and Rozen, molten together, and so let the weight hang till all the sore places be healed, and there is no question but the Crest will stand both upright and strongly.

C H A P. XLIV.

A certain and approved way, how to raise up the Crest that is fallen.

THe most infallible and certain way to raise up, and to keep when it is so risen, a Crest that is fallen: Is first to raise up the fallen Crest with your hand, and to place it in such wise as you would have it, and it ought to stand: then having one standing

on the same side the Crest falleth from, let him with one hand hold up the Crest, and with the other thrust out the bottom or foundation of the Crest, so as it may stand upright: then on that side to which it falleth, with an hot Iron (somewhat broad on the edge) draw his neck first at the bottom of the Crest, then in the midst of the Crest, and lastly, at the setting on of the hair, and be sure to draw it through the skin, but be sure no deeper, for this will enlarge and open the skin.

Then on the other side (from whence the Crest falleth) gather up the skin with your hand, and with two plaisters of Shoo-makers Wax laid one against another at the edge of the wound, and with smooth splints to stay the skin, that it may shrink neither upward nor downward, then with a pair of sharp Siziers clipt away all the spare skin which you had gathered up with your hand, then with a needle and some red silk, stich the skin together in divers places, and to keep the skin from breaking, stich the edges of the plaister together also, then annoint the sore with Turpentine, Honey and Wax molten together, and the places which you drew with the hot Iron, with peece-grease made warm. And thus do twice a day till all be whole, and have great care that you splints shrink not.

C H A P. XLV.

Of the Manginess in a Horses Main.

THe Manginess which is in the Main of a Horse, and maketh him shed his hair, proceedeth either from the rankness of blood, poverty, or lousiness, or else of rubbing where a mangy Horse hath rubbed, or else of fretting dust lying in the Main for want of good dressing. The signs are, the apparent rubbing and itching of the Horse about the Main and Neck, and the scabs fretting both the flesh and skin, besides the shedding and falling away of the hair. The cure (according to the opinion of some of our old Farriers) is, first let him bleed on the Neck-vein, and cut away all the hair from the scabs, then with a hot Iron as big as a mans finger, sear all the sore place even from the one end to the other: Then annoint all the place you so burnt with black Sope,

and now and then wash it with strong Lye and black Sope mixt together.

☞ Other good Farriers for this Manginels only take of fresh grease one pound, of Quicksilver half an ounce, of Brimstone one ounce, of Rape oyl half a pint, mingle them together, and stir them continually in a pot with a slice, until the Quick-silver be so wrought with the rest, as you shall perceive no Quick-silver therein: that done, take a blunt Knife, or an old Horse-comb, and scratch all the mangy places therewith until it be raw and bloody, and then anoint it with this oymntment in the Sun-shine, if it may be, to the intent the oymntment may sink in, or else hold before it either a hot fire pan, or a hot bar of Iron, to make the oymntment melt into the flesh, and if you see that within three dayes after thus once annointing him he leave not rubbing, then mark in what place he rubbeth, and dress that place again, and questionless it will serve.

C H A P. XLVI.

Of the shedding of hair in the Main.

HAir, for the most part sheddeth or falleth from the Main of a Horse, by reason of certain little Worms which eat and fret the roots of the hair asunder. The cure whereof is, first, to annoint the Main and Crest with black sope, and then to make a strong lye either of running water and Ash-ashes, or else of Urine and Ash-ashes, and with that to wash the Main all over, and it will help him.

C H A P. XLVII.

Of the pain and grief in a Horses Withers.

BOth to a Horses Withers, and also to his back, do happen many infirmities and Sorranes, some proceeding from inward causes, as of the corruption of humours, and sometimes of outward causes, as through the galling, pinching, and wringing of some naughty Saddle, or some heavy burthen laid on the Horses back,

back, or such like: And of these griefs some be small, and some be great: The small are only superficial Blisters, Swellings, Light galls, or bruifings, and are easily cured; but the great are those which pierce to the very bone, and be most dangerous, especially if they be nigh to the back bone. Then to speak first of the smaller gallings, whensoever you shall see any swellings to arise, either about your Horses Withers, or any other part of his back, the Cure is (according to the opinion of some of the old Farriers) first of all if the place be much swoln and festered, then to pierce it with a sharp hot Iron in many parts on both sides of the neck, and then put into the same tents of Linnen cloath, dip in warm Sallet Oyl, and then after to dry and heal it up with the powder of Honey and Lime mixt together.

Others use to take Butter and Salt, and to boyl them together until they be black, then to pour it hot on the swelling: and then to take warm Horse-dung, and lay it on the sore back until it be whole, dressing it once a day.

Others (especially the best of the ancient Farriers) use as soon as they see any swelling to arise, to bind unto it a little hot Horse-dung, to see if that will assuage it; which if it will not, then to prick it round about the swelling with a Fleim, Knife, or Lancet, yet not too deep, but so as it may pierce the skin, and make the blood issue forth: that done, take of Mallows, or Smalage, two or three handfulls, and boyl them in running water until they be so soft as pap: then strain the water softly from it, and bruise the herbs in a green dish, putting thereunto a little Hoggs grease, or else Sallet oyl, or Sheeps suet, or any other fresh grease: boyl them and stir them together, nor frying them hard, but as they be soft and supple: and then with a clout lay it warm upon the sore, renewing it every day once until the swelling be gone, for it will either drive it away or bring it to an head, which lightly chanceth not in these small swellings, except some Gristle or bone be perished. Others of the ancient Farriers use, when they see any swelling to arise about a Horse back, first to shave the place with a Razor, and then to lay thereunto this plaister: take a little Wheat-flower, and the white of an Egg beaten together, and spread it on a linnen cloath, which being laid unto the swelling two or three dayes, and not removed will bring it to an head, and when you come to take it off, pull it
away

away so softly as you can possible, and where you see the corruption gathered in a head together, then in the lowest place thereof, pierce it upward with a sharp Iron somewhat hot, that the matter or corruption may come out, and forget not to annoint the sore place every day once with fresh Butter and Hoggs grease until it be whole.

Others of our later Farriers use, when they see any swelling, only to lay wet hay unto it, for that will either drive it away, or bring it unto a head, and then when it is broken, you shall lay upon it a plaister of Wine lees, renewing it as often as it grows dry, and if your Lees be too thin, you may thicken them with Wheat-flower: or if you like not this medicine, then you may make a plaister of thick Barm, as great as the sore, and renew it once a day until the swelling be asswaged: but if you see that any corruption be knit together, then you shall Lance it in the nethermost part, and let out the matter: then wash the sore either with Urine, Ale, or Beer, made scalding hot; then dry up all the moisture from the sore either with a linnen cloath, or with a sponge: then cover all the sore over with burnt Allem beaten to powder: And thus dress the Horse once a day until the flesh be grown up so high as you would have it, then shall you dress the sore but once in two or three dayes. But if you see it skinneth but slowly, then may you annoynt the edge of the sore all about after it hath been washed as aforesaid, with Unguentum Album, for that will make the skin to come fast: but if you do perceive that by dressing it too seldome there doth begin to grow any proud flesh, then shall you take a dram of Mercury, and mingle it with an ounce of Unguentum Album, and annoynt all the sore places therewith once in two dayes: this will correct the proud flesh, and cause it to skin and heal suddenly.

Others use for the abating of these swellings, to boyl Mallows in the grounds of Ale, and to clap it hot to the swelling: and if the swelling do break, wash it with piss, and pour hot molten Butter upon it. Others use to shave away the hair, and then to lay very hot unto it a handful of Leeks stampd and mixt with Boars grease, or else to take a turf of earth burned red, and laid to as hot as the Horse can suffer it. Others use to take nettles beaten to pieces, and mixt with hot Urine, and so lay it on hot, and then set on the saddle: and then if after two or three dayes dressing the swelling break, then
look

look if there be any dead flesh within the sore, and either eat or cut it out: then take a pound of fresh grease, and a pound of Salet oyl, three ounces of white Wax, one ounce of Turpentine, and three drams of Verdigrease, melt all these together, and tent the sore therewith till it be whole: for this will both eat away the ill flesh, and incarnate good. Others take green Cole-worts and stamp them in swines grease, and then lay it plaister-wise on the sore, and it will assuage it, especially if you ride the Horse a little to make the medicine enter in. Now if there be no great swelling, but only the skin chafed off, then you shall wash the raw place with Water and Salt, or else with warm Wine, and sprinkle upon it the powder of Honey and Lime: or else the powder of Myrrh, or the powder of burnt silk, or felt, or cloath, or of any old post.

Other Farriers use when only the skin is galled off, to take a spoonful of thick Cream, and to put as much Chimney soot into it as will make it thick like an ointment, and then to lay it upon the sore, and questionless it will heal it presently if the wound be not very deep.

C H A P. XLVIII.

Of any galled back or Withers how great soever the swelling or inflammation be.

IF the swelling, pinch, wringing, or gall, either upon the Withers, or any part of the back of a Horse be extraordinary great, and much inflamed, so that there is now no apparent hope that it can be got away without much Apostumation: Then the Cure, according to the opinion of the ancientest Farriers, is, to take Barm, and mix it with so much Soot of a Chimney, and make it so thick therewith, that it shall seem like Tarr, and with that make a plaister, and lay it to the sore place, renewing it twice a day, and it will very suddenly both draw and heal it perfectly.

Others use to take a handful of bay Salt, and a handful of great and small Oat-meal, and put a quantity of old stale Urine thereto, and stir them all together, and temper it like pap or paste, and then make round balls thereof, then throw them in a fire, and make them red hot, then take them forth and beat them to fine powder, and then

then strow of that powder all over the sore, so oft as you shall see any part thereof bare, and it will heal it. Other Farriers use if they see the swelling to be any thing great, first to draw round about the swelling with a hot Iron, and then cross him with the same Iron, in manner of this figure :

then take a round hot Iron, having a sharp point, and thrust it up into the swelling on each side upwards towards the point of the withers, or top of the back, to the intent that the matter may issue downwards at both the holes : that done, tent both the holes first with a tent dipt in Hoggs grease to kill the fire, and also annoint all the burnt places therewith, continuing so to do until the swelling be asswaged, renewing the tent every day once until the fiery matter be fallen away : then tent him again with washed Turpentine, mingled with the yolks, of three or four Eggs and Safron, renewing the tent every day once until it be whole.

But if for all this the swelling do not go away, then it is a sign of some inward impostumation, and then it shall be good that you lance it, and let out the corruption : then take of honey half a pint, of Verdigrease two ounces beaten to powder, and mix it together with Honey, then boyl them in a pot until they look red, then being lukewarm, make either a tent or a plaister, according as the wound shall require, renewing the same every day once until it be whole. But the sore may be so vehement, that for want of looking to in time, if it be on the Withers, it will pierce downwards betwixt both the shoulders, even into the body, which is most dangerous and very mortal : therefore whensoever you shall fear any such hollownes, you shall tent the hole with the Salve last mentioned, and thrust after it a good piece of dry sponge, as well to keep the hole open, as also to suck out the corruption, and thus you shall renew once a day until the sore be whole.

Others of our late Farriers use to take Butter, Vinegar, and bay Salt, and melting them together, lay it to the sore warm until it break, then strow upon it either Soor, or the powder of Clay Wall ; but if it be much festred, then take a pottle of verjuyce, two pennyworth of green Copperas, and boyl it unto a pint and a half : then wash and search the hollownes therewith, then fill the hole with red Lead, and so let it remain three dayes untouched, then wash it with

with the same water again, and fill the hole again with red Lead, and so every other day wash it with that Water, and lay red Lead thereon, and it will heal the sorest back whatsoever. Now all these medicines already rehearsed are sufficient enough for the healing of any galled back whatsoever; yet forasmuch as divers Farriers hold divers opinions, and think what they know to be only best approved, and in asmuch as you shall not be ignorant of any mans skil or Knowledge, which beareth any ground of reason in it; I will repeat you a Catalogue of other medicines, which assuredly are all good in their kinds and you may use them as occasion shall be administred.

First then know, that the powder of Brier leaves will dry and heal up any gall'd back. Also Rye flower, the white of an Egg, Honey, Barley straw burnt, and Soot, will dry up, and heal a sore back: The powder of Honey and unsleckt Lime will skin any gall: the powder of wild Cow-cumbers dried in an Oven, will heal any gall, provided the sore be first washed with Vinegar. Onions boyled in Water, and laid hot to a swoln Horses back, will asswage the swelling: and the yolk of an Egg, Salt, and Vinegar beaten together, will heal it when it is broken, provided that you wash the sore first with Ale, wherein Rosemary hath been sod. The Soot or grime of a brass pot, the powder of the bone of a Crab-fish, or the powder of Oyster-shells, any of these will dry and skin a gall'd back.

Lastly, (and besides it, a man needeth no more medicines) for this purpose, take hay and boyl it in strong Urine, and lay it to the swelled place, and it will either asswage it, or bring it to a head, then launce it, and let out the matter, then stop the whole with Rozen, Wax, and fresh grease molten together; but if you find any dead flesh to grow within the sore, then eat it out either with Verdigrease beaten to powder, and strowed thereon, or else with Mercury calcined, called of some precipitate, being likewise strowed on the proud flesh; and when the proud flesh is gone, you may dry up the sore only with the powder of Rozen, and nothing else. See further of this disease in the new Addition for the Fistula marked thus .

C H A P. XLIX.

Of a Canker in the Withers of a Horse.

IF a Horse after he hath been violently wrung upon the Withers, be suffered to go unlooked to, and that the sore breaketh upwards through its own violence, yet the great substance of the matter or corruption descending and rotting still downward, it cannot chule but breed to a Cankerous and vile Ulcer, as dangerous as is any Fistula, which you shall know by these signs: First, the matter that issueth from the sore, will be sharp, hot, and watrish, lye fretting the hair away where it runneth down, and about the hole of the sore will be a kind of spongius proud, dead flesh, which stoppeth the passage of the gross matter. Now the Cure of this cankerous sore is, according to the opinion of the old Farriers, to take a Razor, and cut open the hole of the Ulcer, so that you may see into the holowness; then cut out all the dead flesh till you come to the quick, then take a quart of old stale Urine, and put thereto a handful of Salt: then boyl it well on the fire, then having cleansed the sore either with a cloath, or a wispe of Hay, wash it well with the Liquor: then take the yolks of four Eggs, and a peny-worth of Verdigrease, and a spoonful of flower, and make a plaister thereof, and lay it to the sore, dressing him in this sort once a day until it be whole.

Others of our ancient and latter Farriers use to take of the strongest Beer a pint, put into it a quarter of a pound of Allom, and half a handful of Sage, seeth it to the one half, then take out the Sage-leaves and with the rest dress the Horse once a day, and it will heal any cankerous sore in that part whatsoever.

C H A P. L.

Of the *Stickfast*, or *Sti fast*, horns, or hard bones growing under the Saddle.

THese stickfasts, sitfasts, or horns that grow in a Horses skin under the Saddle, is a certain dead skin like a hard piece of Leather, growing fast in the flesh: it commeth of some old bruise, which not impostumating, the skin falleth dead, and sticketh hard and fast to the flesh.

The cure is, take either a sharp crooked instrument made for the purpose, or else a long nail with the point turned inward, and catching hold on the edge of the dead skin, or horn, which will clap or rise from the sound skin, and with a sharp knife cut away all the dead hard skin from the sound flesh: and if when it is cut out, the hollownes be somewhat deep, then you shall heal it up by pouring hot molten Butter into it evening and morning: then when the flesh is made even, dry and skin it either with the powder of Honey and Lime, or with Soot and Bream mixt together. Others use first to annoint the stick-fast or hard skin with fresh butter or Hoggs grease, until it be mollified and made soft, so as you may either cut them or pull them away, and then wash the wound either with mans Urine, or with white Wine, and then dry it up with the powder of Oyster-shells, or of Bole-armonick.

C H A P. LI.

Of *Wenns* or *knobs* growing about the Saddle skirts.

THe Wenns or knobs which grow about the Saddle skirts, do most commonly grow betwixt two Ribs, and do ever proceed of old bruises. And the cure is, first to mollifie them by annointing them twice or thrice a day with Hoggs grease, for more than a week together, and sometimes to bathe them with hot Wine lees: but if in that space it will come to no head, then lance it from the middle downward, and tent it, with washed Turpentine, yolks of Eggs, and Saffron mingled as well together as is before shewed, renewing the

the rent every day once, until the sore be sufficiently and perfectly healed. Look unto the cure for the splent, and what cure it hat, helpeth this.

CHAP. LH.

Of the Navel-gall.

THe Navel-gall is, when a Horse at any time is bruised on the top of the Chine of the back, behind the Saddle, right against the Navel, whence it taketh the name: it commeth either by splitting of the Saddle behind, or for lack of stuffing, or by means of the Crupper buckle, sitting down in that place, or through some hard Weight or knobs lying directly behind the Saddle: of all bruising on the back, it is the most vile and dangerous, and you shall perceive it by the puffed up and spongy flesh, looking like old rotten Lights about the mouth of the sore. The cure thereof is, according to some of the ancient Farriers, first to cut away all the dead or proud flesh even to the bone, then burn a hole four inches lower then the Navel-gall, and put a Rowel of Horse hair through it: then take the powder of Oyster-shells, or of any old shoe-sole burnt, and strow it on the sore, and ever as it waxeth moist, put on more powder.

Other Farriers for the Navel-gall, do take the white of an egg, wheat-flower, honey, mustard, and sope, of each like quantity, and mixing them together, make a plaister thereof, and after the dead flesh is taken out, and the sore washt with Ale, Butter, and Urine, then lay on the plaister: and if the proud flesh begin to grow again, then the powder of an old burnt shoe, or Nerve oyl, or Verdigreale, will kill it, and the powder of Oyster-shells will skin it. Other of the ancient Farriers use, after they have cut out all the Rotten and dead flesh, to take the white of an Egg and Salt beaten together, and lay that plaister-wise to the sore upon a little Tow, renewing it once a day, the space of two dayes; then take of Honey a quarter of a pint, and of Verdigreale one ounce beaten into powder, and boyl them together in a pot, stirring it still until it look Red, and being luke-warm, make a plaister with tow, and clap it to the wound, washing and cleansing well the Wound first with a little warm
Vinegar

Vinegar or white Wine, continuing so to do once a day until it begin to heal and to skin; then dry it up with sprinkling thereon this powder following: Take of honey a quartern, and as much of unsleckt Lime as will thicken the honey, and make it like a past, and in a fire-pan over the Fire, stir it still until it be hard baked, so as it may be beaten into powder: but ever before you throw on the powder, wash the wound first with warm Vinegar, continuing so to do until it be perfectly skinned. Others use to heal this gall by laying on the sore, a plaister of Chimney soot and barm mixt together, or else mix nettle seeds and Sallet oyl together, and annoint the sore therewith.

There be others which use only to wash the sore with warm Urine and Salt, and then to annoint the place with fresh greafe and salt mixt together, or else to take of Bettony, powder of Brimstone, Elibor, pitch, and old greafe, of each like quantity, and stamp them together, and when you have washed the sore with old Urine, then annoint it with this oyntment until it be whole. See also for this disease in the new Additions for the Fistula, thus marked .

C H A P. LIII.

Of the swaying in the back.

A Horse is said to be swayd in the back, when either by too great a burthen, or by some slip, strain, or over-hasty and straight turning, he hath taken an extreme Wrinch in the lower part of his back below his short Ribs, and directly between his fillets: the signs whereof are a continual reeling and ronling of the Horses hinder parts in his going, and also he will falter many times, and sway sometimes backwards, and sometimes side-long, and be ready to fall even to the ground, besides, the Horse being laid, will with a great deal of difficulty rise up again.

The cure, according to the opinion of the old Italian Farriers, is, to take of the fat of the fruit of the Pine-tree two ounces, of Olibanum three ounces, of Rozen four ounces, of Pitch four ounces, of Bolearmonick one ounce, and of Sanguis Draconis half an ounce: incorporate all these well together, and lay it plaisterwise all over the Reins of the Horses back not taking it by any means away until it fall off. Others

Others of our own Farriers use first to cover the Horses back with a sheeps skin comming hot from the Slaeeps back, laying the fleshy side next to his back, and then lay a warm houssing cloath upon the same, to keep his back as hot as may be, and so let it continue until it begin to smell: then take the old skin away, and apply a new unto it, continuing so to do the space of three weeks, and if he amend not with this, then draw his back with a hot Iron right out on both sides of the ridge of his back, from the pitch of the buttock, unto a handfull within the saddle: and then again over-thwart, according to this figure, and let every Line be an inch one from another, neither let the stroke be deep, and burned no more than that every one may look yellow: then lay upon the burning this charge or plaister: take of pitch one pound, of Rozen half a pound, of Bole-armonick half a pound made into powder, and half a pint of Tarre, and boyl a'l these together in a pot, and stir it till every thing be molten and thoroughly mingled together, then being luke-warm, daub all the burning therewith very thick, and thereupon clap as many flocks of the Horses colour as you can make to abide on, and remove it not before it fall away of it self: and if it be in Summer you may turn the Horse to grass.

C H A P. LIV.

Of special weakness in the back.

According to the opinion of our oldest Farriers, (though my self have taken little notice of the infirmity) there is another kind of weakness belonging to a Horses back, which they call the fretting or biting of the Reins, which do proceed from abundance of humours resorting to that place, whereby all the hinder parts of the Horse do lose their feeling and strength, and such a Horse falleth down to the ground: yea, and the humours many times resorting to the heart, do suffocate the same, and in two or three hours do
cause

cause the Horse to dye. The cure, according to the opinion, is, first to let the Horse bleed abundantly in the neck vein, and to draw his back with a hot Iron, in such sort, as is declared in the last Chapter, and then to make him swim a pretty while in some River: then Rowel him upon the haunches near unto the huckle bones, and then to annoint the fore place with Hoggs greafe, and three leaved Grass stamped together, until he be whole.

C H A P. LV.

Of the swelling of the Cods or Stones.

THis kind of swelling or inflammation of the Cods commeth either by some wound received, or by the stinging, or else biting of some venomous beast, or else by some great strain either in running or leaping, or by the biting of one Horse with another. The cure is, according to the opinion of the most ancient Italian Farriers, first to bathe the Cod with water, wherein hath been sodden the roots of wild Cowcumbers and Salt, and then to annoint it with an oyntment made of Oyl, Goats greafe, and the white of an Egg, or else to bathe the Cod in warm Water, Nitrum, and Vinegar mingled together, and also to be annointed with an oyntment made of Chalk, or of Potters earth, Ox-dung, Comin, Water and Vinegar mingled together: or else to be annointed with the juyce of the Herb called Nigh-shape, or with the juyce of Hemlock, which grows on Dunghils: and if need require, to let him bleed on the flank-veins. But our latter Farriers, who hold that this Disease commeth ofttest after some sickness, or surfeit with cold, being a sign of amendment from that sickness, do cure it in this sort: take of Bean-flower, Wheat-meal, Comin, and Hoggs greafe, of each like quantity, and making a plaister thereof, spread it all over the Horses cods and stones. Others boyl Groundsel in Wine Vinegar, and so bath the Horses cods therewith: or else take a quart of good Ale-wort, and set it on the fire with crumms of brown Bread strongly leavened, and better than a handful of Comin made into powder: then with Bean-flower make a plaister of them all, and apply it to the grief as hot as can be suffered: or if this help not, take Cows dung, and seeth it in milk, and lay it upon the
swel-

swelling as hot as may be, and it will assuage it. But if this inflammation proceed from rankness of Seed, which you shall see by the much moist sliminess of his yard, then you shall first make him cover a mare, then keep him without Provender, and let him bleed above the great Vein, which is between his Lips, and lay thereto hard Eggs beaten in his own Dung, and make a plaister of the same, and lay it to his Cods, and once a day wash his Cods with cold water.

Other ancient Farriers use to let the Horse bleed in his flank-veins, and then take of oyl of Roses and of Vinegar, of each half a pint, of Bole-armonick half a quartern beaten to powder, mix them together in a Cruze, and being luke-warm annoint the Cods therewith, with two or three feathers bound together: and the next day ride him into the water, so as his Cods may be within the water, giving him a turn or two therein; and so return fair and softly home unto the stable: and when the Horse is dry, annoint him again as before, and do this every day until the Horse be whole.

Now there be other Farriers, which hold that this Disease may come by means of evil humours and corrupt blood, which resort unto the Cods, and then the Cure is, to cover all the Cods over with a charge made of Bole-armonick and Vinegar wrought together, renewing it every day once until the swelling go away, or that it break of it self, and if it break, then to tent it with Mel Rosatum, and make him a breech of Canvase to keep it in, renewing the tent every day once until it be perfectly well.

CH A P. LVI.

Of incording, or bursting, or the rupture in Horses.

THis Rupture, as our old Farriers call it, this incording or burstness in Horses, is, when the rim or thin film which holdeth the guts up in a Horses body is broken, so that the guts fall down either into the Cods of the Horse, or into the Horses flank, as I have seen divers: Now this burstness commeth either by some stripe or blow of another Horse, or else by some strain in leaping over a Hedge or a Ditch, or by teaching a Horse to bound when he is too young, or when a horse goeth himself upon some pole or stake, or by forcing a Horse when he is full to run beyond his strength, or by stopping

Stopping a Horse too suddenly upon naughty and hollow ground, whereby the stradling and slipping of his hinder feet, may stretch or rear the rim.

The signs to know this Sorrance before it be apparent to the Eye, are; the Horse will forsake his meat, and stand throaring or leaning alwayes on that side that he is hurt, and on that side, if you search with your hand, betwixt the stone and the thigh, upward to the body, and somewhat above the stone, you shall find the gut it self big and hard in the feeling: Whereas on the other side you shall find no such thing.

Now for the Cure, although for mine own part I both do and shall ever hold it incurable, as long as a Horse is a beast without reason, yet for your satisfaction I will not stick to repeat what the best Farriers, and my self have practised, in as much as it worketh much good, though no absolute Cure.

The cure then is, to bring the Horse into some house or place which hath over head a strong baulk or beam going over-thwart, and strow that place thick with straw, then put on four strong patterns with four rings on his feet, and fasten one end of a long rope to one of those rings, then thread all the other rings with the loose end of the rope, and so draw all his four feet together, and cast him on the straw, that done, cast the rope over the baulk, & hoyst the horse so as he may lye flat on his back, with his leggs upward without strugling; then bathe his stones well with warm water and butter molten together, and the stones being somewhat warme and well mollified, raise them up from the body with both your hands, being closed by the fingers close together, and holding the stones in your hands in such manner, work down the gut into the body of the horse, by striking it downwards continually with your two thumbs, one labouring immediatly after another, until you perceive that side of the stone to be so small as the other: and so having returned the gut into his right place, take a list of two fingers broad, throughly annointed with fresh Butter, and tye his stones both together with the same, so nigh the body as may be, yet not over hard, but so as you may put your finger between: that done, take the Horse quietly down, and lead him gently into the stable, where he must stand warm, and not be stirred for the space of three Weeks: but forget not the next day, after you have placed his gut in his true

place, to unloosen the List and take it away, and as well at that time, as every day once or twice after, to cast a dish or two of cold water up into his cuds, and that will make him to shrink up his stones, and thereby restrain the Gut from falling down; and at the three weeks end, to make your Cure so much the surer, it were not amiss to geld the stone on that side away, so shall he hardly be bursten again on that side: and during the cure, let him not eat much, nor drink much, and let his drink be alwaies warm.

C H A P. LVII.

Of the botch in the groins of a Horse.

IT is the opinion of the best Horse-leaches, that if a gross Horse which is full of humours, be suddenly and violently laboured, that then the humours will resort into the weakest part, and there gather together and breed a botch, and especially in the hinder parts betwixt the Thighs, not far from the Cuds. The signs are, the hinder Leggs will be all swoln, specially from the Cambrels or hoofs upward, and if you feel with your hand, you shall find a great knob or swelling, and if it be round and hard, it will gather to a head.

 The cure according to the general practice, is, first, to ripen it with this plaister, take of Wheat-flower, of Turpentine, and of Honey of each like quantity, stirring it together to make a stiff plaister, and with a cloath lay it to the sore, renewing it once every day until it break or wax soft: and then launce it, so as the matter may run downward, then tent it with Turpentine and Hogs greale molten together, renewing it every day once, until it be perfectly whole.

C H A P. LVIII.

A most certain and approved Cure for the Botch in the Groins, or any Impostumation.

AS soon as you perceive the swelling to appear, lay upon it a plaister of Shooc-makers Wax spread upon Allom Leather, and let it lye until the sore grow soft: then open it with a Lancet, or let it break of it self: when the filth is come out, wash the sore very well with strong Allom water, then tent it with the oyntment called *Ægyptiacum* till it be whole.

C H A P. LIX.

Of the Itch, Scab, or Manginess in the Tail, or general falling of the hair:

HOrses, through the corruption of blood, or the fulness of rank feeding, or through over-heating and labouring, or by the infection of other Horses, do many times get the general scap, itch, or manginess in the tail, and sometimes in the spring time Horses are often troubled with the Truncheon-worms in their fundament, which will make them rub their tails, and fret the hair, yet are free both from mange and scurf. Wherefore if then you only rake the Horse with your hand, annoint it with sope, and pull out the worms, you shall cause the Horse to leave his rubbing: but if you perceive the hair to shed and fall from the Tail, through some small worms that grow at the roots of the hair, or through some little fretting scurf, then you shall annoint all the tail with sope even to the ground, and then wash it with very strong lye after, and that will both kill the worms, and scoure out the scurf: but if much of the tail be saln away, then you shall keep the tail continually wet with a sponge dipt in fair water, and that will make the hair to grow very fast. Now if in the Horse tail shall grow any Canker, which will consume both the flesh and bone, and make the joynts to fall away one by one, then you shall wash all his tail with *Aqua-fortis*, or strong Water made in this sort. Take of Green Copperas and

of Allom, of each one pound, of white Copperas a quartern, boyl all these together in three quartes of running water, in a very strong earthen pot, until the one half be consumed: and then with a little of this Water being made luke warm, wash his tail with a little clout or flax bound to the end of a stick, continuing so to do every day once till it be whole. But if as I said before, through the corruption of blood; food, or labour, this scab, itch, or manginess, spread universally into many parts of the tail, you shall then likewise wash it with the same strong water until it be whole.

CHAP. LX.

Of the general Scab, Manginess, or Leprosie, over the whole Body.

THe general Manginess or Leprosie, which runneth all over the Horses body, is a cankered filthy scurf which covereth the same, proceeding from abundance of melancholy corrupt blood, ingendred by infection or unwholesome food, or else by indiscreet Labour. The signs whereof are, the Horse will be all mangy, and covered over with a white filthy scurf, full of scabs, and raw places about the neck and flanks, and ill-favoured to look on, and rubbings, scratching, and biting: Of all Diseases there is none more infectious, nor will more certainly kill a Horse if it be not prevented.

Now the cure, according to the opinion of skilful Farriers, is, first to let the Horse blood in the one side of the neck-vein, and within two dayes after on the other side of the neck, & within two dayes after that in the flank veins, and last of all in the vein under the tail: then wash all the sore places with Salt-brine, & rubbing them hard with a whip of straw hard twisted, so as they may bleed well, and be all raw: that done, annoint the places with this oyntment, take of quick-silver one ounce, of Hoggs grease one pound, of Brimstone beaten into powder a quartern, of Rape oyl a pint, mingle these things well together, until the Quick-silver be thoroughly incorporated with the rest, and having annointed all the raw places with this Oyntment, make it to sink into the flesh, by holding and waving up and down over it, a hot broad bar of Iron, and then touch him no more again the space of two or three dayes: during which time, if you see that he rubbeth still in any place, then rub that place again with an old Horse.

Horse-comb, or a hair cloth, to make it Raw, and annoint it with fresh Oyntment. But if all this will not help, then with a hot Iron round and blunt at the point, so big as a mans little finger, burn all the mangy places, making round holes, passing only through the skin, and no further: for which intent it shall be needful to pull the skin first from the flesh with your left hand, holding it still until you have thrust the hot Iron through it, and let every hole be a span one from another, and if need be you may annoint those holes with a little Sope, and let the Horse be very thin Dyeted, during this curing time.

Now for mine own part, I do utterly dislike this burning, for it is a foul manner of cure, and breedeth much Eye-sore in the Horse, and therefore other of our latter Farriers use for this Disease, after the Horse is let blood in the neck-vein, to take a good quantity of fresh grease, and mix it well with the powder of Chalk, then put thereto a good quantity of the powders of Brimstone and Elicampane Roots, and stir them all well together, and take a pretty quantity of Quick-silver, and kill it with your fasting spiritule, or Salet Oyl, and mix it with all the rest very well together, and so annoint all the sore places about the Horse with this oyntment. Others use to take of Lamp oyl, the fine powder of Brimstone, of black Sope, of Tar, of Hoggs grease, and the soot of a Chimney, of each like quantity, and then mix them all well together, by boyling them on the fire, and then annoint all the sore places therewith, as hot as the Horse can indure or suffer it, alwayes provided that the Horse be let blood before you use the oyntment.

Others use after the Horse is let blood, to take of oyl de bay a pound, and of Quick-silver one ounce, and mixing them together, never leave stirring thereof, till the Quick-silver be killed and incorporated with the Oyl, then annoint all the sore places therewith, after you have made them raw by rubbing them.

Other Farriers use first to let the Horse blood, then to wash all the sore places within two dayes after with water wherein young Broom, or the herb of Arsmart hath been well sodden, and smally chopt and mixt with a little Soot, and rub him well until the sore places bleed; then take a pound of black Sope, a pottle of keen Mustard, four penny-worth of Brimstone made into powder, three penny-worth of Quick-silver well killed with fresh grease, two

peany;

penny-worth of Verdigrease, a quarter of a pint of grease, stir all these together in a Vessel till the grease and other things be molten with labour, and without fire, and therewithall annoint all the sore places, and with once annointing, and twice washing, this will cure him.

Other Farriers use, if the Horse be young, to let him blood on both sides the neck, and then to cut the skin down the middest of his fore-head two fingers in length, then with a cornet open the skin an inch wide on both sides the slit, and put therein thin slices of the green root of Elicampane, or Angelica, which is better: so let them remain under the skin till the matter rot, then crush it forth after two or three dayes, and in twelve dayes the roots will fall out as it healeth, and this will cure the Mange, provided that you annoint all the sore places with the powder of Brimstone, Verdigrease, and oyl Olive, mixt upon a fire very well together. Others use after blood-letting, to rowel the Horse under the neck, that the evil humours may issue forth, then to rub all his body quite over with an hard hair cloath, or an old curry comb, until the Horse bleedeth: after that take of Sulphur, Salt, and Tartar, of each a like quantity, beat them and temper them with very strong Vinegar, and as much common Oyl, and therewith annoint all the sore places: or else take very strong Wine Vinegar, the Urine of a Boy under twelve years of age, and the juyce of hemlock, mix them together, and wash the Horse therewithall.

Other Farriers use after blood-letting, to annoint the Horse with one of these Oyntments, the sore having been before rubbed till it bleed, either with Brimstone, Oyl, Vinegar, Salt, Soot, Swinesdung, and unsleckt Lime, of each like quantity, well mixt and boyled together; or else with brine Water sod with nettles, or else with Vinegar, Allom, and Salt-niter boyled together, or else wash the sore with Beef-broath, then boyl Pepper beaten to powder, Verdigrease, and Chervel in fresh grease, and annoint the Horse all over therewith, holding a Chaffing-dish and coals, or a hot bar of Iton to his body, to make the oyntment sink in.

 Lastly, and as good as any of the rest, after the Horse hath been let blood, take an old curry-comb, or a wool-card, and rub every sore place about the Horse till it bleed, then take of the oldest piss you can get, a pottle, and of green Copperas three quarters of a pound,

pound, mix and stir them well together, then set them on the fire, and boyl them a while, then as hot as the horse can suffer it wash him with the same: after his washing is a little dried, take of oyl one ounce and a half, of Quick-silver two ounces, of white Elleborus one ounce, with a good quantity of Swines grease, mingle all these well together, till no part of the Quick-silver can be seen, and then annoint the horse all therewith: and if the first time do not cure him, the second will most assuredly, provided, that during the time of cure you keep the horse with a very thin diet.

C H A P. LXI.

Two most excellent and approved Medicines, (especially the latter) for the foulest Mange or Leprosie that can possibly happen to any Horse.

Take Hoggs grease, Bay-salt, Worm-wood, and Rue, of each a pretty quantity, stamp them together well in a mortar, and when it is brought to one entire salve, stop it hard into the Horses Ears, then either bind them up, or stitch them together, that the Medicine may not fall out: and do thus three or four dayes together, and it will not only cure the Mangy, but any foul Farcy whatsoever.

The second Medicine, and most assured for the Mangy, is, to take fresh grease, and yellow or white Arsnick, and mix them very well together till it come to a pale yellow salve, then your horse having been let blood, and all the scurf taken away, either with an old curry comb, or such like hard thing, so as the sore places may lye raw, then annoint them all over with this oyntment, and let the Horse stand so tied, that he may by no means touch any part of his body with his mouth, and when he hath stood thus two or three hours, then take old Urine warmed, and wash away all the oyntment, and then give the Horse his mear: thus dress the Horse twice or thrice at the most, and it is sufficient for any Mange whatsoever.

C H A P. LXII.

How to know when a Horse halteth before, and in what part his grief is.

THere is nothing more necessary for any mans understanding, that shall have occasion at any time to use a horse, especially for the skilful Farrier, than to know the reason why a horse halteth, and where the grief remaineth, as well because those griefs lye most concealed, as also because our Kingdome is so very full of subtil unconscionable Horse-courers, that they are careful most to conceal that which may soonest cozen their Neighbours: you shall know then that no Horse halteth before, but his grief must be either in his shoulders, in his legs, or in his feet: if it be in his shoulders, it must either be on the top of his shoulder-blades, which we call the withers, or at the bottom of the shoulder-blade joyning to the marrow-bone, which is the fore-pitch of the breast, or in the elbow of the Horse, which joyns the nether end of the marrow-bone and the leg together.

Now for the general knowledge whether the grief be in the shoulder or no, look if the horse do not lift up his leg, but traileth it upon the ground, then it is in the shoulder, and is a new hurt: if he cast his leg more out in his going than the other, and that almost with an unbended knee, then it is also in the shoulder, and it is an old hurt: if you take him by the head-stall of the bridle, and turn him as short as you can possible of both hands, if then you see him when he is turned on the same side, to favour his leg very much (as he cannot chuse but do) then also his grief is in his shoulder: or if when a horse standeth in the stable, he stretcheth out his fore-legs, and setteth it more forward than the other, it is partly a sign the grief is in the shoulder, but not absolutely.

Now when you know generally that the grief or pain is in the shoulder, then you shall learn to know in what part of the shoulder, as thus: if the Horse halteth more when the Rider is upon his back, than when he is off, then the grief is in the top of the Withers: if when with your hand you gripe and handle him upon the top of the shoulder blades, you find that he shrinketh much, and offereth

to bite at you, (not having any galled back before, for that may deceive you) then assuredly the grief is on the Withers. If the horse goeth bowing unto the ground, and tread his steps very thick, then it is a sign the grief is in his breast, between the nether part of the spine-bone, and the upper part of the marrow-bone, and therefore if with your thumb you press him hard in that part, you shall see him shrink, and be ready to fall down.

Now if when you take his Elbow in your hand betwixt your finger and your thumb, and gripe it, the Horse presently taketh his foot from the ground and lifts up his Legg, offering threewithall to bite or snap at you, then the grief is only in the Elbow.

Now if the grief whereof a Horse halteth be in his Leg, it is either in his Knee, in his Shank, or else in the pastorn joynt: If it be either in his knee or pastorn joynt, he will not bow them in his going like the other, but will go very stiffly upon them: If the pain or grief be in the Shank, then it is by means of some Splent, Screw, Windgal, or such apparent grief, most apparent to be beheld.

Now if the grief of his halting be in his foot, then it is either in the Cronet, in the Heel, in the Toe, in the quarters, or in the sole of the foot; if it be in the Cronet, either the grief will be apparent, the skin be broken or swoln some manner of way, or else laying your hand upon the Cronet it will burn and glow exceedingly, and then he hath got some strain of the joynt within the hoof: if it be in the Heel, as by over-reach, or otherwise then it is to be seen, and he will tread altogether upon the toe: if upon any of the quarters, which is to be understood from the middle-hoof to the heel, then going on the edge of a bank or Hilly ground, he will halt more than on the plain ground, and by the Horses comming towards you, and going from you upon such edge or bank, you shall perceive whether his grief be in the inward quarter or ourward quarter: Also he may halt upon his quarters by the pricking of a Nail, and then you shall with a pair of pinsons nip the head of every Nail and his Hoof together, and where be complaineth there draw the Nail, and if the Nail sink, then there is his pain. If he halt in the toe, which is seldom or never seen, then he will tread altogether upon his heel: if his grief be in the Sole of his Foot, as by the treading upon some nail or stub, or by surbayting, or such like, then he will halt all afeer one

fort, upon any ground whatsoever, unless it be upon the stones, and then he will halt the most.

Now to be sure in what part of the foot the grief is, it shall be good, first to make him go upon the plain ground, and then upon a hard and stony way, and after upon a Banky ground, and by taking careful notes, and careful handling him, you shall easily see of what member he haltech.

C H A P. LXIII.

Of halting behind, and where the grief is.

IF a Horse halt behind, his grief of necessity must either be in his hipp, (of some called the huckle bone) or in the stiff, in the Hough, in the Hamm, in the Legg, in the nether joynt, in the Pastorn, or in the Foot. If he halt in the hipp of any new hurt, the Horse will go side-long, and not follow so well with that Legg as with the other, neither will he be able to turn upon that side without much favouring of his Legg: But if it be any old hurt, then the fore hip will shrink, and be lower then the other, and it is best seen when he goeth up a hill, or upon the edge of some bank, so as the worst Legg may go on the higher side, for then he will halt so much the more, because it is very painful unto him to go so unevenly wrinching his Legg; if the grief be in the stiff, then the Horse in his going will cast the stiff joynt outward, and the bone on the inside will be somewhat bigger than the other, neither can he any more than touch the ground with his toe: if his grief be in his hoof, then it is by means of some Spaven, which is apparent both to be seen and felt, or else of some strain or blow, and then the swelling will most evidently appear: And the like is to be said of the Hamm, wherein may be seen the Sellander, or such like apparent Sorrance, causing the Horse to halt: If the grief be either in the Legg, Pastorn, or Foot, you shall find it by such signs as have been taught you in the former Chapter.

C H A P. LXIV.

How to know if a Horse have any hidden grief in him that maketh him to halt, when he cometh to travall, and whence it proceeds.

NOW for as much as there are some Horses which through long rest and running at Grass, will wear out the worst of their griefs, so that when they come to be but gently Ridden, they will cover their halting, and through a natural awe they bear unto the man, will, whilst he is on their backs, go as if they were as sound as might be, yet be truly of themselves very imperfect: in this case, both to keep your self from couzening, and to discover the most hidden infirmity, you shall first take the Horse out of the Stable in a long string, and causing one to run him in his hand, at the length of the halter, mark how he sets down his Leggs, for if any be imperfect, then that he will favour: but if at first he go upright and favour no Leg, then take his back and ride him a while roundly up and down a rode, then light from his back, and let him stand still an hour, then as before, let him be run in a mans hand, at the halter length, without any man on his back: and believe it is a most certain rule, if he have the least grief that may be, he will then shew it, and favour that Limb which is most pained or grieved: for by this rule only, are many bad Horse-courfers discovered.

Now to know whereof these griefs proceed, you shall understand, that if the grief proceed of a hot cause, then the Horse halteth most when he travelleth or is chafed. But if it proceed from cold causes, then he halteth most when he is cold, and least when he is hot and much travelled.

C H A P. LXV.

Of the grief and pinching in the shoulder.

THe grief or pinching of the Horses shoulder, commeth either by labouring and straining the Horse too young, or by the carriage of too great burthens. It is to be known by the narrowness of the breast, and by the consumption of the flesh of the shoulders; in so much that the fore part of the shoulder-bone will stick out and be much higher then the flesh, and if it be of any longer continuance, he will be very hollow upon the Brisket towards the fore-booths, and he will go wider beneath at the feet than at the knees. The cure thereof, according to the opinion of some Farriers, is, to make a slit of an inch long, with a sharp knife, upon both sides, an inch under the shoulder-bone, and blowing the skin well from the flesh with a Swans quill, both of the one and the other shoulder, even up to the top of the Withers, and stroaking the Wind up equally with your hand into both the shoulders, and then when they are full, stick the Windy places with a Hazel stick over all the shoulder; then loosening the skin from the flesh again, Rowel both the slits, either with rampins of Horse hair, or with round pieces of the upper Leather of an old shooe, with a hole in the midst, which is called a French Rowel, for the matter to issue forth at, and let the rampins be at least two handfulls long in the skin, and the round Rowel at least three inches broad, and being so put as they may lye plain and flat within the cut, then once a day you shall turn the Rowels into the skin, and thrust out the matter: but if the hole grow so straight that the matter cannot easily come out, with a sharp knife you shall enlarge it, then put a pair of Pastorns on his fore-leggs, and so let him stand fifteen dayes, at the end whereof walk him a broad, and try how he goeth, and if he doth not go to your liking, then continue him in the same manner other fifteen dayes, and he will go sound.

But our best Farriers use, after they have Rowelled the Horse, as is aforesaid, then to lay this charge or plaister all over his withers, shoulders, and breast: take of Pitch and Rozen, of each a pound, of Tarx half a pint, boyl all these together in a pot, and when it is some

somewhat cooled, take a stick with a woollen cloath bound to the end of it, and dip it into the charge, and cover or daub all the shoulder therewith: that done, clap flocks of the colour of the Horse (or as near as you can get it) upon the charge, and every other day make your Rowels clean, and put them in again, continuing thus to do the space of fifteen dayes; then take out the Rowels, and heal up the wounds with two tents of flax dipt in Turpentine and Hoggs grease molten together, renewing the same every day once until the Wounds be whole, but let the charge lye still until it fall away of it self; and if you let the Horse run at grass till he have had a frost or two, there is no question but he will be a great deal the sounder.

There be other Farriers which use to Rowel the Horse, as is aforesaid, yet cross-wise, that is, one over-thwart the other, then draw all the shoulder over with a hot drawing Iron in the comliest wise you can, making many scratches down his shoulders, then annoint both them and the Rowels once a day with sweet Butter, and walk the Horse up and down evening and morning, that the humours may flow to the sore places, and issue forth, and with your hands once a day at the least, thrust out the matter: this cure is likewise to be continued the space of fifteen dayes, and then the horse will be whole: yet for mine own part, in so much as the cure is foul, I do not much affect it.

C H A P. LXVI.

Of the Wrench in the shoulder.

THe Wrench or strain in the shoulder, commeth of some dangerous slipping or sliding, either in the Stable or abroad, or of too suddain stopping, when a Horse gallops, or by falls, either on the planks, or on slippery ground, or by too suddain turning on unsure ground, or by going too rashly out of some door, or by the stroak of another Horse, you shall perceive it by his trailing his Legg upon the ground close after him.

The cure is, to let him blood upon the plat-vein, and take away the quantity of three pints of blood, which blood you must save in a pot, and put thereunto, first of strong Vinegar a quart, and half a dozen

dozen broken Eggs, shells and all, and so much Wheat-flower as will thicken all the Liquor; that done, put thereunto of Bole-armonick beaten into fine powder a pound, of Sanguis Draconis, two ounces, and mingle them together so as the flowr may not be perceived, and if it be too stiff, you may add a little more Vinegar; then with your hand daub all the shoulder from the main downward, and betwixt the fore-bowels all against the hair, and let not the Horse depart out of that place until the charge be surely fastned unto the skin; that done, carry him into the stable, and tye him up to the rack, and suffer him not to lye down all the day, and give him a little meat, dyeting him very moderately the space of fifteen dayes, during which time he may not stir out of his place, but only to lye down; and every day once refresh the shoulder point with this charge, laying still new upon the old; and at the fifteen dayes end, lead him abroad to see how he goeth, & if he be somewhat amended, then let him rest without travelling the space of one moneth, and that will bring his shoulder to perfection: But if he mend nothing at all, for all this that is done, then you shall rowel him, as is before shewed in the former Chapter, just upon the shoulder point, and so keep him rowelled the space of fifteen dayes, not forgetting to stir the rowel, and cleanse the Wound each other day, and then walk him up and down fair and softly, and turn him alwayes on the contrary side to the sore: And when he goeth upright pull out the rowel, and heal up the Wound with Turpentine and Hoggs grease molten together, as is before said.

But if all this will not serve, then it shall be very requisite and needful to draw him Chequer-wise with a hot Iron, over all the shoulder point, and also to make him to draw a Plough every day, two or three hours at the least, to settle his joynts, for the space of three weeks or a moneth: and if any thing will help, these two last remedies will set him sound.

Now there be other Farriers which for this grief, first let the Horse blood in the breast-vein, and then rowel him from the nether part of the spade bone down to the point of the shoulder, which done, you shall set a patten shooe upon the sound foot, and so turn the Horse to grais for the space of a moneth, not forgetting every other day to stir and remove the rowels, and so thrust out the matter: Then as soon as you see him go sound, you shall take off his patten shooe,

shoe, and pull out the Rowels, and then let him run still at grass, till he have taken a frost or two, and no doubt but he will continue sound.

C H A P. LXVII.

Of the Wrench in the nether joynt.

THis wrench commeth by treading his foot in some hole, or in some rough or stony way. The signs whereof are chiefly these; the Horse will halt, and the top of his back upon the points of his shoulder will be swoln, and somewhat hard to handle.

The cure is, take of black Sope half a pound, and having made it hot in a pan, take a handful or two of Tow, and dip it into the Sope, then lay it very hot over all the Horses Withers, then clap a plaister of Wax, Turpentine, and Hoggs grease molten together over it, then cover it with two or three warm cloaths, and keep the joynts as warm as may be: thus let him stand twenty four hours ere you dress him again, and continue this manner of dressing for fifteen dayes, and the Horse will go soundly.

Now there be other ancient Farriers, that instead of this black Sope will take Wine Lees, and Wheat-flower mingled together, and making a plaister thereof, lay it very hot to the grieved place, and so renew it once a day until the Horse go sound.

C H A P. LXVIII.

Of splaiting the shoulder, or of shoulder torn.

The splaiting of the shoulder, is, when by some dangerous slip or slide, either upon the side of some bank, or upon the plaunchers, the Horse hath his shoulder parted from his breast, and so leaves an open clift, not in the skin, but in the flesh and film next the skin, whereby the Horse halteth, and is not able to go; it is to be seen by the trailing of his leg after him in going.

The cure whereof is thus; first put a pair of straight pastorns on his fore-feet, keeping him still in the stable without disquieting of him; then take of Dialthea one pound, of Salet oyl one pint, of oyl de

de Bay half a pound, of fresh butter half a pound; melt all these things together in an earthen pot, and annoint the grieved place therewith, and also round about the inside of the shoulder; and within two or three dayes after, both that place and all the shoulder will swell, then either prick him with a Lancet or fleam in all the swelling places, or else with a sharp hot Iron, and then annoint it still with the oyntment before said; but if you see it will not go away, but swell still, and gather to a head, then launce it where the swelling doth gather most, and is softest under the finger, and then tent it with flax dipt in Turpentine, and Hoggs grease molten together, as is before shewed, renewing that tent twice a day till the sore be whole.

CH A P. LXIX.

Of the shoulder pight.

THe shoulder pight is, when a Horse by reason of some great fall, rush or strain, hath the point of his shoulder thrust out of joynt, which is easie to be seen, in that the point of the sore shoulder will stick out much further than the other, and the Horse will halt down right. The cure whercof, as the old Farriers hold it, is, first to make him swim in a deep water, up and down a dozen turns, for that will make the joynt return into his true place, then make two rough pins of Ashen-wood as big as your little finger, being sharp at the points, each one five inches long; that done, slit the skin an inch above the point, and an inch beneath the point of the shoulder, and thrust in one of these pins from above down-ward, so as both the ends may equally stick with the skin; and if the pin of wood will not easily pass through, you may make its way first with an Iron pin; that done, make other two holes cross to the first holes, so as the other pin may cross the first pin right in the midst, with a right cross, and the first pin would be somewhat flat in the midst, to the intent that the other being round may pass the better without stop, and close the juxter together; then take a piece of a little Line somewhat bigger than a Whip-cord, and at one end make a loop, which being put over one of the pins ends, wind the rest of the Line good and straight about the pins ends, so as it may lye betwixt the
pins

pins ends and the skin, and fasten the last end with a pack-needie and a pack-thread unto the rest of the cord, so as it may not slip; and to do well, both the pinns and the cord would be first annointed with a little Hoggs greafe; then bring him into the stable, and let him rest the space of nine dayes; and let him lye down as little as may be, and put a Pastern on the fore Legg, so as it may be bound with a cord unto the foot of the manger, to keep that Legg alwayes whilst he standeth in the stable, more forward than the other, and at the nine dayes end take out the pinns and annoint the fore place with a little Dialthea, or with Hoggs greafe, and then turn him to Grasse. Other of our late Farriers use, first to lay good store of straw under the horse, and then put a pair of strong Pastorns on his fore-leggs, and another on his hinder, then having thrown him upon his back, to hang him up by the Leggs from the ground, with two Ropes drawn over some beam or bulk, which will put the bone into his true place again; then having let him down againe fair and softly, loose the fore Pastorn of the sound Legg, and with a cord before you let him rise, tye the same Legg to the foot of the manger, so short as in his rising he shall be forced to hold his Legg before him, for fear of putting his shoulder out of joynt, and let him stand so tyed for the space of three dayes; and presently when he is up, burn all the point of his shoulder with a hot drawing Iron chequer-wise, a ful foot square at the least, and let every stroke be no more than an inch distant one from another: and having burned him well, charge all these burned places, and all the rest of his shoulder with Pitch, Rozen, and Tar molten together, and laid on something hot with a cloath tyed to a sticks end; then clap flocks of the Colour of the Horse upon it, then charge him againe over the flocks, and at the three dayes end loose his foot, and put a pair of Pastorns upon his feet, and let him neither lye down nor stir out of the stable for the space of fifteen or twenty dayes: then may you lead him abroad, and see whether he go well or no, and if he be not perfect, you may then give him as much more rest, and that will recover him.

C H A P. LXX.

A general and certain Cure for any desperate and curable strain in the shoulder, or any other hidden parts.

➔ **T**AKE a large earthen Vessel, and fill it full of the herb Arsmare and Brook-lime, equally mixt together, then put to them as much of the oldest and strongest Urine that can be got, as will cover the herbs all over, then cover the pot close, and keep it in some safe cool place.

Now when you have occasion to use it, take an earthen Pipkin, and put therein both of the Urine and the herbs, so much as shall be convenient for the grief, and boyl it well, then if it be for a shoulder strain, you shall take an old Boot and cut off the foot, that you may draw it over the Horses foot, and above his knee almost to the Elbow of his shoulder, keeping the nether part of the boot as close about his Legg as may be, but the upper part wide and spacious; into this boot thrust all your mixture as hot as the Horse can suffer it, and lay it fast and close about the shoulder, especially before and behind, then drawing up the upper part of the boot, so fasten it to the mane of the Horse, that it may not slip down, and thus do once a day till the grief depart, for this Medicine is so violent, that if there be any foul matter that must come forth, it will bring it to an head, ripen, break and heal it, if there be no such thing, then in a short time it will draw away the offending humours, and give present ease.

C H A P. LXXI.

Of the swelling of the fore-Leggs after great labour.

HORSES not much used to travil, will after great labour swell upon their fore-Leggs, because heat and violent excess will cause humours to resort down into the Leggs, especially if such Horses shall be inwardly fat; for the indiscreet labour will melt that inward grease, and make it descend down into the Leggs.

The Cure, according to the practice of some Farriers, is, to take a pound

pound of Nerve oyl, a pound of black Sope, and half a pound of Boars greafe molten, and boyl them all well together, and then strain it and let it cool, then annoint your Horses Leggs therewith, being made luke-warm again, and then keep his Leggs clean from dust.

Other Farriers use to bathe his Leggs in Butter and Beer, or in Vinegar and Butter, some with Sheeps-foot oyl, some with Neass-foot oyl, some with Train-oyl, and some with Pifs and Salt-peter boyled together, of all which, Pifs and Salt-peter is the best; and after any such bathing, you must coule up the Horses Leggs with hay ropes wet in cold water, even from the Pastorn to the knee, but in any wise not too straight, for fear of doing hurt, so let him stand continually when he resteth.

Now other Farriers somewhat more curious, use for the swelling of the Leggs this bath; take of Mallows three handfulls, a Rose-cate, of Sage one handfull, boyl them together in a sufficient quantity of water, and when the Mallows be soft, put in half a pound of Butter, and half a pint of Salt-oyl, and then being somewhat warm, wash the swelling therewith every day once, the space of three or four dayes; and if the swelling will not go away with this, then take Wine-Lees and Cummin, and boyl them together, and put thereunto a little Wheat-flower, and charge all the swelling therewith, and walk him often; and if all will not serve, then take up the great vein above the knee on the inside, suffering him not to bleed from above, but all from beneath: and it will take away the swelling.

C H A P. LXXII.

Of a Horse that is foundred in his feet.

A Horse is said to be foundred of his feet, when he hath such a numbness, and pricking or tingling within his hoofs, that he hath neither sence nor feeling of his feet, but is in all respects like a man, that by hard or crooked sitting hath both his feet asleep (as we call it) duering which passion we know we can neither well go nor stand; and even so it fareth with a Horse in this case, for the course of the blood being stopped, those Obstructions cause this torment. It commeth most commonly when a Horse is very fat,

and hath his greafe molten within him, and then suddainly cooled by taking his Saddle off too soon, or by standing still in the cold unstirred, or else by letting him stand in some shallow water little higher than his feet-lock.

A Horse also may be foundred by wearing straight and uneasy shooes, especially in the Summer season, when a Horse travelleth upon the hard ground.

The signs to know it, is, the Horse goeth crouching, and drawing all his four feet within the compals almost of a peck, and will stand so fearfully as though he stood upon needles.

Now you shall understand, that a Horse will sometimes be only foundred of his fore-feet, and not of his hinder, which you shall know in that the Horse will tread only upon his hinder feet, and not on his fore feet, and go as though his buttocks would touch the ground; and sometimes he will be foundred upon his hinder feet, and not upon his fore-feet, and that you shall perceive by his fearfulness to set his feet to the ground, being also so weak behind, that he will stand quivering and quaking, and cover alwayes to lye down, and sometimes he will be foundred of all his four feet, the signs whereof were first declared.

Now for as much as the Cures be all of one and the self same nature, and what cureth the first, cureth also the rest, I will joyn them altoegther, with this advise, that if you find the Horse to be foundred on the fore-feet only, then to apply your Medicine to the fore-parts only, if on the hinder feet, then to the hinder parts; but if of all four feet, then to lay your Medicine to all the several parts of the body, as shall be presently declared.

To come then to the Cures, (according to the opinion of a worthy Knight well experienced in this Disease) if your Horse be foundred of all his four feet, you shall cause him to be let blood on his two breast veins of his two fore-Leggs, somewhat above his knees, also you shall let him blood on his two spur-veins, and on the veins of his two hinder feet a little above the hoof, between the hoof and the pastorn: you shall let these veins bleed well, to the quantity of a quart or three pints, which blood you must save in some Vessel, and stir it with a stick to keep it from clearing: and when it hath bled as above-said, put it all into one vessel, then stop the wounds with some Horse-dung, or some earth, and make a charge with the blood
in

in this fore: take as much Wheat-meal, Bran and all, as will make the blood somewhat thick, and put it into the blood; take eight or ten Eggs, and break them also into the blood, shells and all; take a pint of strong Vinegar, and a quantity of Bole-armonick brayd, and put them into the blood also; which done, you shall stir them all together; then shall you with your hand lay the said charge all along upon the reins of the Horses back, upon his buttocks and down his shoulders: when you have laid on this charge thus, you shall take two long Linnen raggs dipped in the same charge, with which so dipped, you shall garter the Horse above the knees of his fore-Leggs somewhat hard, and likewise with two other like raggs so dipped, you shall garter him hard above both his hinder hoofs also: that done, cause him to be walked upon the hardest ground you can find for the space of two or three hours: if he be loath to go, as commonly he will be, let one follow him and beat him with a stick or a wand to force him to go; then after his walking Let him be set up and tyed to the rack, that he lye not down, and there let him rest two or three hours; which done, let him be walked again two or three hours more as afore-said, then set him up, and let him feed, and when you give him drink, which you may do within two or three hours after his feeding, let it be a warm mash of Ma't and Water, then let him feed a little after it, then ride him a little; and if you let him stand an hour or two in a pool or standing water up to the belly, and one upon his back, it is good also, and after that ride him again a little: then let him be set up well dressed and covered, an so by little and little ride him a day or two, and then you may boldly journey him, for it is Riding that bringeth the Horse to the perfectness of his feet, and you shall find your Horse as sound as ever he was.

Now during this cure, you are to take these Observations into your memory.

First, you shall not need to remove or stir the Horses shoes; then you must after twenty four hours rub off the charge from the Horses back.

Item, You shall take away his garters after twelve hours, and rub his knees and houghs with your hand, and with wisps, to take away the numbness.

Item, If you cannot get Wheat-meal, you may take Oaten-meal.

Item, If he will not bleed in the veins before named, then you may take your blood from the neck-vein.

Lastly, If you take the Horse in hand to cure within twenty four hours after he is foundred, he will be sound again within twenty four hours after; if he go longer, the cure will be longer in doing.

Now the ancient Farriers of this Kingdome, and amongst the Italians, differ not much in their practice from this already rehearsed, only into the charge they add of Sanguis Draconis half a quartern, and as much Bean-flower as Wheat-flower, and of Turpentine half a pound; then if they did see that within four days the Horse did not recover, then they did know that the hurtful humours did only lye in the Horses feet, and there you shall search his feet with your butteris, paring all the soles of his feet so thinn, that you may see the water issue through the sole: that done, let him blood at the toes, and let him bleed well; then stop the vein with Turpentine and Hoggs grease molten together, and laid upon a little flax, and then tack on his shoes, and cram the place where you did let him blood hard with tow, to the intent it may be surely stop; then fill all the soles of his feet with Hoggs grease and Bran boyled or fryed together so hot as is possible, and upon that stopping clap a piece of Leather, and two cross splints, to keep in the stopping; and immediately after this take two Eggs, and beat them in a dish, and put thereunto as much Bole-armonick and Bean-flour as will thicken the same, and mix them well together, and make thereof two plaisters, such as may close each foot round about somewhat above the Cronet, and bind it fast with a list or a rowler, that it may not fall away nor be removed for the space of two dayes, but let the soles of his feet be cleansed and new stopped every day once, and the Cronets to be removed every two dayes until the Horse be sound; during which time, let him rest unwalked for fear of loosning his hoofs: but if you see that he begin to amend, you may walk him fair and softly once a day upon some soft ground to exercise his Leggs and feet, and let him not eat much, nor drink cold water; but if his foundring break out above the Hoof, which you shall perceiue by the looseness of the Coffin above by the Cronet, then when you pare the sole you must take all the fore-part of the sole clean away, leaving the heels whole, to the intent the humours may
have

have the freer passage down-ward, and then stopp him, and dress him about the Cronet, as is before said. Now if the Horse during this Cure chance to fall sick, or grow so dry in his body that he cannot dung, then you shall first rake him, and after give him a glister of Mallows, three handfulls boyld in water from a pottle to a quart: then after it is strained, put to it half a pound of Butter, and a quarter of a pint of Salet oyl, and so administer it, then when the Horse hath emptied his Belly, give him this comfortable drink. Take of Malmsey a quart, and put thereunto a little Cinamon, Mace and Pepper beaten into fine powder, and of Oyl a quarter of a pint, and give the Horse to drink of that luke-warm; that done, let him be walked up and down a good while together if he be able to go, if not, then tye him up to the rack, and let him be hanged with canvas and ropes, so as he may stand upon the ground with his feet, for the less he lyeth down the better; but these extremities do seldome happen. Now there be other Farriers, which, for the foundring of a Horse, only take Verdigrease, Turpentine, Salet-oyl, and Hoggs grease, of each like quantity, of Wax one ounce; boyl all together, and so dip flax or tow in it: then having pared his feet thinn, and let him blood on the toes, stop all his feet with that Oyntment very hot; or else they take the roots of Nettles, and Hemlock, with eldern peels, of each a handfull, and boyl them tender in Boars grease, or Hoggs grease, so let him blood in the midst of the foot on the toe-vein, then bathe and chafe his joynt and Legg therewith all about from his knee unto the fetlock, and then clap it to, and bind a cloath fast to it as hot as you can. So use this once a day till it be well.

Now for mine own part, although there is not any of these former recited practices but are found perfectly good in their kinds, yet I have not found any so absolute either for old or new founders, as this which I shall rehearse. First, you shall with a very sharp drawing-knife, draw every part of the soles of the Horses feet so thinn as is possible, even till you see the very water and blood issuing forth, and being sure to draw or pare every part alike, which can hardly be done with a butter-knife: then at the very sharp end of the truss of the Horses foot you shall see the vein lye, then with your knife's end lift up the hoof and let the vein bleed, (which as long as you hold open the hoof will spin a great way forth) when it hath
bled

bled better than a pint, you shall close the hoof, and so stop the vein: then tack on his foot a hollow shooe made for that purpose: that done, clap a little tow dipt in Hoggs grease and Turpentine upon the vein very hard: then take two or three hard Eggs roasted, and comming burning hot out of the fire, and buist them in the sole of the Horses foot: then pour upon them Hoggs grease, Turpentine, and Tarr boyling hot, and as much flax dipt therein as will fill up the hollow shooe, then lay on a piece of Leather to keep all the rest in, and splent it sure: and in this manner dress his four feer, if all be foundred, otherwise no more than are foundred; and thus you shall dress the Horse three times in one fort-night, and without any further trouble, you shall be sure to have the Horse as sound as ever he was.

Now if the Horse be foundred through the straiting of a shooe, which in truth is not a founder, but a frettrizing, which is a degree less than foundring, then you shall for that sorrance, first take off his shooe, and let him blood on the toes, then stopping the place with bruised Sage, tack on his shooe again, and stop it with Hoggs grease and bran boyled together, as hot as is possible; and to this twice in one fortnight, and it will help him.

C H A P. LXXIII.

Of the splent as well on the inside of the knee, as of any other part of the legg.

A Splent is to the outward feeling a very gristle, or rather a hard bone, sometimes as big as a hazel nut, sometimes as big as a wall-nut, according to the age thereof, growing upon the inside of the fore Legg, between the knee and the upper Pastorn joynt, and sometimes just underneath, and close unto the knee, which is of all other the most dangerous splent, and doth the soonest make a Horse lame: it commeth by travelling a Horse too young, or by over-pressing him with heavy burthens, whereby the tender sinews of his Legg are offended. Now for the knowledge thereof, it is easie because it is apparent unto the Eye, and most palpable to be felt. The Cure, according to the opinion of the ancient Fariers, is, to take an Onion, and picking out the core, put into it half a spoonful of Honey,

Honey, and a quarter of a spoonful of unslackt Lime, and four penny-waight of Verdigrease; then closing up the Onion, roast it in hot embers until it be soft: then bruise it in a mortar, and as hot as the Horse can suffer it, lay it to the splent, and it will take it away: but in any case cut no skin. Other of the ancient Farriers use first to wash the splent with warm water, and then to shave off the hair, and lightly to scarrifie or prick the skin with the point of a Razor, so as the blood may issue forth: then take of Cantharides half a spoonful, and of Euforbium as much, beaten into fine powder, and mingle them together with a spoonful of Oyl de Bay, and then melt them in a little pan, stirring them well together, so as they may not boyl over, and being so boyling hot, take two or three feathers, and annoint all the fore places therewith: that done, let not the Horse stir from the place where you so dress him for an hour after, to the intent he shake not off the Oyntment: then carry him fair and softly into the Stable, and tye him so as he may not reach with his head beneath the manger: for otherwise he will covet to bite away the smarting and pricking Medicine, which if it should touch his Lipps would quickly fetch off the skin; and also let him stand without Litter all that day and night: the next day annoint the fore place with fresh Butter, continuing so to do every day once for the space of nine dayes: for this will allay the heat of the Medicine, and cause both that and the crust of the splent to fall away of it self. There be other Farriers which use with a fine hot drawing Iron to burn the sorrhance down in the midst, the full length of the splent, and then over-thwart like this figure; then four hours after such burning, take Cows dung new made, and Salet oyl mixt and well beaten together, and therewith annoint all the fore places; and this must be done when the splent is very young.

Others use to slit the Sorrhance with a Knife the whole Length of the splent, and then with a Cornet to open the slit, and lay the splent bare, then to make about the wound a Coffin of clay all open to the top; then take Boars greafe made scalding hot, and pour it into the wound until the clay Coffin be full, then let it rest until the greafe be cold: after that let the Horse rise, and this with once dressing will take the splent clean away without any blemish or eye-sore. Others use to beat the splent with a stick, and to bruise it well,

then prick it with an Awl, and thrust out the blood, then lay on a piece of white Leather, and with a hot Iron make the grease scald it, or else melt in to it Pitch and Verdigrease, and then lay a plaister of Pitch over it, not removing it until it fall off by it self; or else after you have beaten and prickt the splent, take out the core of an Onion, and fill it with bay Salt, then roast it soft, and lay it hot to the splent, and instead of the Onion, you may if you will bind to a hard roasted Egg, being fire-hot. Others Farriers use to slit the skin the Length of the splent, then to dip a little piece of Linnen in warm Wine, and sprinkle Verdigrease thereon, and so lay it to the slit, renewing it once a day until the splent be gone. Others use to shave off the hair, and to rub the splent twice a day with Tarr very hard, until the splent be gone; but this splent must be very young and tender: for fasting spitule is as good as Tar. Other Farriers use to take a black Snail and slit her, and put in Bay-salt, and lay it to the splent being opened, renewing it once a day until the splent be gone: then let the vein above the knee be taken up, and let it bleed from below, lest it feed the splent again. Others use if the splent be upon the knee to burn it, as is before said; then take Wormwood, Smallage, Pellitory of the wall, and Brank-Ursine stamp with Swines grease, and lay it to the burnings, provided that first the hair be shaved off, and if the splent be below the knee, this cure is good also, and much the safer.

Now after all these former recited practices, you shall understand that the most cleanliest way to take away a splent, is, first, after you have cast your Horse, with a Hazel stick of a pretty poise and bigness, gently to beat the splent at the first, and then by degrees a little harder and harder, till the splent grow soft in every part, then with the point of your Launcet let out all the blood and water; then take a brickbat, and having laid it on the fire, when it is exceeding hot, hold it in a red Cloath, and therewith rub the splent, and smooth it upon the top till you have dried away the blood, and that no more moisture cometh out; then take of Pitch, of Rozen, and Mastick, of each a like quantity, melt them well together, and being very hot lay it over and all about the splent: then clap flax of the colour of the Horses Legg upon it, and so let it rest upon the splent until it fall away of it self: and if when it is fallen away, you perceive that any part of the splent remain behind.

hind, which hardly will be if it be orderly beaten; then you shall dress that remainder as you did the other before, and the splent will be perfectly cured. Now for the surest and most certainest way to off a splent, it is thus: With the point of a sharp knife, make a slit of more than a Barley corn Length, just upon the top in the midst of the splent, and let it be so deep that you may be sure that the bone of the splent is bare, then put into that slit with the point of your knife, as much Mercury Sublimat as the quarter of an Hazel nut kernel, and within three or four dayes, it will so have earen the splent, that it will fall out of it self; then you shall heal up the sore either with fresh Butter molten, or with a plaister of Hogs grease, and Turpentine mingled and melted together; only in this cure you must beware, that you tie the Horse so, as for four and twenty hours he may not touch the sore place with his mouth. Now in conclusion, I am to give you this small precept, to bear ever in your mind, that is both for the healing of this, and for all other humours whatsoever. You must first stay the falling down of the new humours to the place troubled, as by binding plaisters, as Pitch, Rozen, Mastick, red Lead, Oyl, Bole-armonick, and such like; then to draw our matter which is there gathered with drawing simples, as Wax, Turpentine, and such like: and lastly, to dry up the relicks with drying powders, as Honey and Lime, Oyster-shells, Soot, and such like; and also you must know, that all Splints, Spavens, or Knobs, must either be taken away at the beginning or after the full of the Moon.

C H A P. LXXIV.

An approved and certain way to take away any Splint without breaking any hair.

Take the root of Elicampane well washed and cleansed, and lap it in a brown paper, wet it and roast it in the hot embers, as you would roast a Warden; Then as hot as the Horse can suffer it, (for I would not have you scald) after you have rubbed and chafed the excrecion, clap this unto it, and bind it fast on, and in two or three dressings it will consume away the splint.

Also, if morning and evening you rub the splint with the oyl of *Origanum*, it will take it away.

C H A P. LXXV.

Of the Screw, or thorow Splint.

Although divers of our Farriers do distinguish and make a difference betwixt a Screw and a Splint, saying, that the screw is ever of the out-side of the Legg, as the splint is of the inside; yet it is most certain, that the disease and infirmity is all one, and may as well be call'd a splint on the out-side of the Legg, as a splint on the inside of the Legg; and this splint on the out-side is ever least dangerous. Now a Horse many times will have both these splints at one time, and upon one Legg, nay, I have seen them so just opposite one to the other, that one would have thought they had gone through the Horses Legg; whence it hath come to pass, that many foolish Farriers being of that mind, have intuled them a thorow splint, and I have seen my self, some well repared Farriers, that having the cure brought unto them, have refused the same, saying it was a thorow splint, and therefore most incurable: but the opinion is most absurd and ridiculous: for the shin-bone being hollow, and full of pith and marrow, there can nothing grow through it, but it must confound the marrow, and then the bone cannot hold, but must presently break in sunder, especially, when such a weak spongy substance as a splint is, shall possess the whole strength of the leg. Now for the cure: as the splint and it are all one, so they have all one cure, and what helpeth the first, with more ease helpeth the Latter, in as much as it is not full so dangerous, nor so near the main sinews.

C H A P. LXXVI.

Of the Mallander.

A Mallander is a kind of a dry scab, growing in the form of lines or streaks over-thwart the very bought or inward bent of the knee, and hath hard hair with stubborn roots, like Swines bristles, which corrupteth and cankereth the flesh like the roots of a Childs scabbed

scabbed head; and if the sore be great and deep, it will make the Horse go stiff at his first setting forth, and halt much. It doth proceed either from the corruption of blood, or from negligent keeping, when the Horse wanteth clean dressing: for you shall know that some Horses naturally are given to have long hair from the top to the bough of the knee down to the fetlock, and that hair in the bough of the knee is oft apt to curl; whereby those Horses, if they be not very carefully and clean kept, are much subject to this disease.

Now for the cure, according to the opinion of the old Farriers, it is thus. Take a barreld herring out of the pickle with a soft row, and two spoonful of black Sope, and so much Allom; beat all these in a mortar well together, and then lay it to the sore, renewing it once a day for three dayes, and it will kill the Mallander, provided alwayes that before you lay any thing unto a Mallander, you ever pull off the dry scabs first, and leave no hair growing within the sore. Other Farriers use to take a pairing of a Cheese, and toasting it very hot, annoint it with Honey, and so lay it hot to the Mallander, and renewing it once a day till the Mallander be whole: or else beat Hens dung and Gilli-flowers well together, and lay it to the sore till it be whole.

Other Farriers use after they have washed the sore clean with warm water, and shaved off the hair and the scabbs, to take a spoonful of Sope, and as much Lime; mingle them together that it may be like paste, then spread as much on a clout as will cover the sore, and bind it fast on with a list, renewing it every day once the space of two or three dayes; and at the three dayes end take away the plaister, and annoint the sore with Oyl of Roses made luke-warm, and that will fetch away scurf or crusty asker, bred by means of the burning Plaister; which scurf being taken away, wash the sore-place well every day once with his own stale, or else with mans urine, and then immediately strow upon it the powder of burnt Oyster-shels, continuing so to do every day once until it be whole.

Others of our latter Farriers use to take a quart of water, half a pint of Oyl, and as much Flower as will thicken it with seething; then lay that hot to the sore twice a day, for four dayes together; then take Mastick, Frankincense beaten to fine powder, Quick-silver, killed either in the juyce of Lemons, or in strong Vinegar, of each an ounce; then of Liturgy half an ounce,

ounce, of Ceruss ten ounces; and as much of Swines grease clarified; incorporate and mingle all these together with Vinegar and Oyl, and lay it to the sore until the Mallander be killed; then heal it up as is fore-shewed. Others use after they have washed it and shaved it, to rub it with Piss and Sope until it be raw; then lay to it Nerve-Oyl, Hony, and strong Mustard, until it whole. Others use to take Sulphur, Vitriol, Sal-nitre, Sal-gem, mixed with Oyl be Bay, and to rub the Mallander well therewith. Now to conclude, you shall understand, that some Horses will have two Mallanders upon one Leg, one above another, and sometimes one a little above the inward bending of the Knee, and another a little below the inward bending of the Knee, but the cure is all alike, and as you dress one, so you may dress two or three.

Now for mine own part, I have not found any thing better for a Mallander, than after the sore is cleansed, to take the ordure or dung of a man, and annoint the sore therewith, and it will kill it and heal it.

C H A P. LXXVII.

Of an Upper-attaint, or Over-reach upon the Back-sinew of the Fore-leg, somewhat above the Pastern-joynt.

THis which we call an Upper-attaint, is nothing else but a painful swelling of the Master-sinew, or Back-sinew of the Shank-bone, by reason that the Horse doth sometimes over-reach and strike that sinew with the Toe of his hinder foot, and thereby causeth the Horse to halt much. Now the signs are both the swelling and the halting; and the cure, according to some of the old Farriers, is, to dress the sore place with a plaister made of Wine lees and Wheat flower laid hot to, or else to take of black Sope and Boars grease, of each like quantity scalding hot; make a Plaister of Sear-cloth thereof, and clap it all about the sore place; or else if the swelling by no salve will dissolve, take a fine thin hot drawing Iron, and draw his Leg all downward with the hair in many small strikes from the one end of the swelling to the other, and make the strikes very thick together, and somewhat deep; then anoint his burning for two or three dayes with black Sope, and
so

to turn the Horse to grass; but if he will not run at grass, then every day give him some moderate exercise; but this burning I fancy not much, for it is foul, & albeit it take away the swelling, yet the seams of the burning, when they are cured, will keep the member big, as if it were still sweld. Now other of the ancient Farriers use first to wash the Leg with warm water, then to shave off the hair as far as the swelling goeth, then to scarifie the sore place with the point of a razor, that the blood may issue forth; then take of Cantharides and Euforbium of each half an ounce, mingle them together with half a quartern of Sope, and with a slice spread some of this Oynment over all the sore, suffering him to rest there where you dress him for one half-hour after; and then you may carry him into the Stable, and there let him stand without litter, and so tyed as he may not touch the sore with his mouth, and then the next day use him in the same manner again; then the third day anoint the place with fresh butter, continuing so to do the space of nine dayes, and at the nine dayes end make him this bath, Take of Mallows three handfulls, a Rose cake, of Sage an handful, boyl them together in a sufficient quantity of water, and when the Mallows be soft, put in half a pound of Butter, and half a pint of Sallet oyl; and then being somewhat warm, wash the sore place therewith every day once till it be whole. Others use to cleave a Chicken or a Pigeon, and to clap it hot to the swelling, and it will abate it; or else take Dialthea, Agripa and oyl, and mixing it together, lay it to the swelling. Others use to take of Frankincense, of Rozen, of Tar, of Euforbium, of Turpentine and Fenugreek, of each a quarter of an ounce, of Suet one ounce, of Oyl an ounce, of Wax three ounces, and three quarters of an ounce of Myrrh, mix and melt them all together, and Plaister-wise lay it to the sore place till it be whole; or else take for this sorrhance, three quarters of an ounce of Sanguis Draconis, an ounce of Bole-armony, as much Oyl, three ounces of Mastick, and as much Suet, and as much Swines greafe, the whites of half a dozen of Eggs, melt and mix them together, and lay them together, and lay it to the swelling, and it will take it away; then make the shoes of his hinder feet shorter than the horns of his toes by a quarter of an inch, and let the horn hang over uncut away, and make the fore-shoe no longer than his heel, but rather shorter.

C H A P. LXXVIII.

An excellent approved Medicine for any Sinewstrain whatsoever.

 TAKE of Vinegar a pint, the whites of three or four Eggs, and as much Bole-armonick, and Bean-flower, as will bring it to a thick salve over the fire; then when it is very hot, lay it Plaister-wise upon the strain, and round about the Leg, and do this not only till the grief be gone, but also till the swelling be taken away.

C H A P. LXXIX.

Of a neather Attaint, or over-reach on the Pastorn-joynts.

THE neather Attaint, or over-reach on the midst and in the hollow of the Pastorn joynt, is a little Bladder full of jelly, like unto a wind-gall, and though it be not apparent to the eye, yet it is easie to be felt, and may come as well by some wrinch or strain, as by an over-reach, and it will make a Horse halt much; the signs are, the neather joynt towards the Feet-lock will be very hot, and somewhat sweld, and the little soft bleb will easly be felt.

The cure, after the opinion of the old Farriers, is, take a small cord, and rowl him somewhat strait from the Knee to the neather joynt, and then in the Pastorn, between the hoof and the joynt with a fleam strike him in the midst of his swelling, and let out the matter; then take the white of an Egg, and beat it with a little Salt, and then dipping flax therein, lay it unto all the swelling, and then unrowel his Leg, and renew the salve twice a day until the grief be gone. But in any case let him not be laboured or ridden whilst he is in curing.

C H A P. LXXX.

Of an Attaint or over-reach on the Heel.

AN Attaint or over-reach upon the heel, is, when a Horse striking the toe of his hinder shoe into the heel, just upon the setting on of the hoof, and this over-reach, if it be not looked unto, will fret and rankle so much inward, that it will endanger the Horses hoof, and you shall commonly see by the cut, the skin hang over the Horses heel, and it will make a Horse halt. Now the cure is first to cut away the skin, and also the hoof, and the flesh, till you have made the fore even and plain without any hollowness; then wash it very well with Beer and Salt, then bind unto it a little flax dipped in the white of an Egge, mingled with a little Bole-armony, renewing it every day once the space of three or four dayes, and that will heal it.

C H A P. LXXXI.

Of the Mellet on the Heel.

AMellet is a dry Scab that groweth upon the heel, sometimes through the corruption of blood, and sometimes for want of clean rubbing and dressing, when he is wet set up; it appeareth like a dry chap without any moisture, and it will be sometimes as well on both heels as on one. The cure, according to the practice of the old Farriers, is, to take half a pinte of honey, and a quarter of a pound of black Sope, and mix them together; then put thereto four or five spoonful of Vinegar, and as much Allome unburnt as a Mens Egge, and two spoonful of Rye Flower; mix them all well together, and then take it away, and wash all his Leg and foot with salt beef broath, and then rope his Leg all the day with wet Hay-ropes, and he will be sound; provided alwayes, that before you dress him, you ever take off the dry scab or scurf, and make the fore as clean and as plain as is possible.

C H A P. LXXXII.

Of false Quarters.

A False Quarter is a rift or open back-seam, sometimes in the out-side, but most often in the inside of the hoof, because the inside is ever the weaker part, which sides are ever called Quarters, whence this sorrhance taketh this name, and is called a false quarter, as much as to say, a sick and unsound Quarter; for it is as if it were a piece set unto the hoof, and the Hoof not all of one intire piece as it ought to be. It commeth many times by evil shoeing, and evil paring, and sometimes by pricking the Horse, and such like hurts. The signs to know it, are, the Horse will halt much, and the rift will bleed, and when the shoe is off, the whole sorrhance is apparent to be seen. The cure, according to the ancient Farriers, is, to take off the shoe, and cut away so much of the shoe on that side where the sorrhance is, as the shoe being immediatly put on again, all the whole rift may be uncovered; then open the rift with a drawer, and fill all the rift with a Rowel of Tow dipt in Turpentine, Wax and Sheep-Suet molten together, renewing it every day once till it be whole; and the rift being closed in the top, draw him betwixt the Hair and the Hoofe with a hot Iron overthwart that place, to the intent that the Hoofe may shoot all whole downward; and when the Horse goeth upright, ride him either with no other shoe than this, or else with such a shoe as may bear in every part but only upon the false quarter until the Hoof be hardned. Others use to annoint it once a day with Sheep-Suet and Oyl mixt together, and that will close the rift.

H Others use to cut away the old corrupt Hoof, and then take seven whites of Eggs, the powder of Incense, of unslackt Lime, of Mastick, of Verdigrease, and of Salt, of each three ounces; mix them well together, then dip in as much hurds as will cover the Fore-hoof lay it on, and then about it lay Swines grease an inch thick, and likewise below it also: bind this on in such sort that it may remain unstirred a fortnight, then renew it so again, and it will make perfect his Hoof. But if there be any corrupt matter gathered within the false quarter, and thereby causeth the Horse to halt, then you

you shall lay your finger upon it, and if the Horse shrink thereat, then it is ripe; then open it with a drawing knife, and let out the matter, then lay on Horse dung, Oyl, Salt, and Vinegar mixt together Plaister-wise, and that will heal it, and make the Hoof good; yet however, you must have care in shoeing him till his Hoofs be hardened, as is before shewed you.

C H A P. LXXXIII.

Of a Horse that is hipped, or hurt in the hips,

A Horse is said to be hipped, when either by strain, blow, or other accident, the hip bone is removed out of his right place. It is a sorrhance as hard to be cured as any whatsoever; for if it be not taken even at the first instant, there will grow within the pot of the huckle bone, such a thick hard substance, that it will leave no place for the bone, and then it is utterly incurable. The signs to know the sorrhance are, the Horse will halt much, and go side-long, and will trail his Leggs a little after him; the fore hipp also will be Lower than the other, and the flesh will fall away on the side of his Buttock. The cure is, according to the best Farriers, if you take him in good time, first to cast him on his back, and then having a strong Pastorn on his grieved Leg, with a rope draw that Leg upright, and with your hands on each side his thigh-bone, guide it directly into the pot: that done, let him down gently, and so suffer him to rise with all meekness; then go with him into the stable, and there charge all his hipp and back with Pitch and Rozen molten together, and laid on warm, and then some flox of his own colour to be clapped upon the same, and so turn the Horse to grass until he go upright.

But if the Horse be not hipped, but only hurt in the hipp, and that newly, then first take of Oyl de Bay, of Dialthea, of Nerve oyl, and of Swines grease, of each half a pound; melt them all together, stirring them continually until they be througly mingled together; then annoint the sore place therewith against the hair, every day once the space of a fortnight, and make the oyntment sink well into the flesh, by holding a hot barr of Iron over the place annointed, weaving your hand to and fro until the oyntment be entred into the skin: and if at the fortnights end you see the Horse not any

thing amended, then slit a hole downward in his skin an inch beneath the hip bone, making the hole so wide, as you may easily thrust in a rowel with your finger; and then with a corner and a quill blow the skin from the flesh above the bone, and round about the same, so broad as the rowel may lye flat and plain within the skin and the flesh: and this rowel will be made of soft Calves Leather, with a hole in the midst, and a thread tied unto it, to pul it out when you would cleanse it, or the hole; and if the rowel be roled about with flax fast tyed on, and anointed with the oyntment under writen, it will draw so much the more.

Now you must thrust in your rowel first double, and then spread it abroad with your finger: that done, tent it with a good Large tent of flax dipt in a little Turpentine and Hoggs greale molten together and made warm, and cleanse the hole and the rowel every day once; and also renew the tent for the space of a fortnight, and before you dress him, cause him every day to be led up and down a foot pace a quarter of an hour, to make the humours come down, and at the fortnights end pull out the rowel, and heal up the wound with the same salve, making the tent every day lesser and lesser, until it be whole: and so soon as it is whole, with a hot drawing Iron draw cross lines of eight or nine inches long right over the hip bone, so as the rowelled place may be in the very midst thereof, and burn him no deeper but as the skin may look yellow; and then charge all that place, and over all his buttocks with this charge. Take of Pitch one pound, of Rozen half a pound, and of Tar half a pint, boyl them together, and then being good and warm, spread it on with a clout tyed in a riven stick, and then clap on a few flox of the Horses colour, and if it be in Summer, let the Horse run to gras a while, for the more he travelleth at his own will, the better it is for him.

C H A P. LXXXIV.

Of Stifling, and hurts in the stifle.

That Horse is said to be stifled, when the stifling bone, which is a little bone of two inches in length, lying between the nether end of the thigh-bone, and the upper end of the great hough-bone of the hinder Leg, is by any strain, stroak, slip, or such like, thrust out of his right place; but if the stifling bone be not removed nor loosened, and yet the Horse halteth by means of some grief in that place, then we say the Horse is hurt in the stifle, and not stifled. The signs are these; If the horse be stifled, the stifle-bone will stick out more of the one side than of the other, and it is apparent to the eye, and in his halting he will no more but touch the ground with his toe.

The cure, according to the opinion of the old Farriers, is, to thrust two round pins cross the stifling bone, through the skin, in such sort as you were taught for the shoulder pight, but the pins would not be any thing near so big, nor so long, because the stifling bone is not so broad as the shoulder: and standing in the stable, let him have a patten and a ring upon his fore Leg, and thereunto fasten a cord, which cord must go about his neck, and let it be so much strained, as it may bring his fore Leg more forward than the other to keep the bone from starting out: But this cure is foul and troublesome, wherefore other Farriers of better experience, use only to set a patten-shoe upon his sound foot, and so turn him abroad, that he may be compelled to tread upon his lame foot: and that straining of it will in a day or two make him as sound as ever he was, and put the stifling-bone into his true place again. But if you cannot readily get a patten-shoe, then you shall take either a plain suringle, or any other broad binding web that will go three or four times about the Horses Leg, and with it you shall garter up the Horses sound Leg three fingers above his hamm, even upon his main great sinew, so straight as yourself and another man can draw it: and then turn the Horse abroad where he may go up and down, and in eight and forty hours the Horse will be sound as ever he was: then take off the garter, and rub the place that was gartered

up with fresh butter, for it will be much swelled.

Now if this mischance of stifling happen unto your Horse in your travail, and that your occasions will not suffer you to stay for any of these Cures, then you shall take your Horse either to some deep Pond, or deep River that hath easie going in and out, and there swim him up and down a dozen turns: which done, you may after travil him at your pleasure: for the more he is labour'd, the sounder he will go. Now if your Horse be not stifled, but only hurt in the stifle, either with some stripe or some strain, then the bone will not stand out, yet perhaps the place will be much sweld. The cure, according to the opinion of the old Farriers, is, to make a little slit in his skin, a handfull below the sore place, and then with a quill blow all the skin from the flesh upwards, and then with your hand press out the wind again, and then thrust in a rowel of Horse-hair from the first slit to the upper part of the stifle bone: this done, take a pottle of old piss and boyl it to a quart, and cleanse it well; then take a handfull of Mallows, and half a pint of Saler oyl, and add them to the piss, and then boyl them well together; then bath all the sore place therewith every day once the space of seven or eight dayes, and let him not stir out of the stable during the cure, and in twenty one dayes he will be sound.

Other Farriers use only to take a pound of Bole-armony, a quart of red wine Vinegar, six Eggs beaten, shels and all, two pennyworth of English honey, and as much Venice Turpentine, one quart of flower, and one good handfull of Bay salt; put all these in a pot, and incorporate them well together, then keep them close one night, and the next day annoint the sore place with some of it; and thus dressing it once a day the space of nine dayes, it will make the Horse sound.

C H A P. LXXXV.

Of the bone Spaven, or dry Spaven.

THe bone Spaven, or dry Spaven, is a great hard knob as big as a Walnut, growing in the inside of the hoof, hard under the joynt, near unto the master-vein; it groweth at the first like a tender gristle, and by process of time, it commeth to be a hard bone, and

and causeth the Horse to halt much. This forrance will come sometimes by nature or descent, as when either the Sire or Dam of the Horse have had the same disease; and sometimes (which is most generally) it commeth when a Horse is Laboured too young; for a Horse in that part of his hinder Legg hath small bones knit all together upon one cluster, which being pressed before they be naturally hardned, cannot chuse but thrust forth these unnatural excrescions. Other whiles it proceedeth from extreme labour and heat, dissolving humours which do descend through the Master-vein, continually feeding that place with evil Nutriment, and causes the place to swell, which swelling in continuance of time becommeth so hard as a bone, and therefore is called the bone Spaven. The signs are the apparent sight of the forrance; and truly for mine own part, I am of the mind of other Farriers, that it is very hard absolutely to cure it, yet that the eye-fore may be taken away, and the halting much eased, is not hard, for I have done it many times. Then to proceed to the cure thereof, according to the opinion of the old Farriers, is thus: First slit the skin just over the head of the Spaven or Excrecion, and open it with a Corner, and in any case have a care that you touch not the master-vein, but put it by: then with your Lancet lay the Spaven all bare, then with a fine Chizel about a quarter of an inch broad, or a little more, strike off the dead of the Spaven, to the quantity of a quarter of an Almond, or according to the bigness of the Spaven: then take two penny-waight of Verdigrease beaten to fine powder, and two penny-waight of Nerve-oyl, and beat them all well together: then laying some of it upon fine Lint, lay it upon the Spaven; then lay dry lint betwixt the medicine and the vein, that the medicine may not touch the vein; then lay a plaister of Pitch, Rozen, Turpentine, and Hoggs grease molten together, all over the hough, both to comfort the joynt, and to keep in the medicine. And thus dress him the space of three dayes, and it will cleanse away the Spaven even to the bottom; at the end of three dayes you shall wash away the corrosive and the matter, either with Tanners water, or with Vinegar, and lay no more of that Salve thereto for hurting the bone; then make a plaister of Diaculum, and lay it upon a Linnen cloath and lay that plaister unto the Spaven, renewing it every day once for the space of seven dayes, and it will heal him up.

Others of the old Farriers use, first to wash the Spaven with warm water, and shave off the hair so farr as the Spaven extendeth, and then scarifie the place and make it bleed: then take of Cantharides one dozen, and of Euforbium half a spoonful; beat them into powder, and boyl them together with a little Oyl de bay, lay this boyling hot upon the sore, and let all his tail be tied up from wiping away the medicine; and then within half an hour after set him up in the stable, and eye him so as he may not lye down all that night, for fear of rubbing off the medicine; and the next day annoiat it with fresh Butter, continuing thus to do every day once the space of five or six dayes; and when the hair is grown again, draw the sore place with an hot Iron in this sort, just upon the Spaven: then take another hot Iron like a bodkin, somewhat bowing at the point, and thrust it in at the neather end of the middle line, and so upward betwixt the skin and the flesh, an inch and an half, and then tent it with a little Hoggs grease and Turpentine molten together, and made warm, renewing it every day once the space of nine dayes; provided that first immediatly after his burning, you take up the master-vein, suffering him to bleed a little from above, then with a red silk tye the upper end of the vein, and leave the neather end open, to the intent that he may bleed from beneath until it cease of it self; and this will diminish the Spaven, but not take it clean away.

Now there be other Farriers which use after they have burne it in manner afore-said, and taken up the master-vein, to annoint it with fresh Butter, till the burning begin to scale; and then take of Sage and Nettles, of each a handful, and boyl them with four handfuls of Mallows in fair water, and then put thereto a little Butter, and with that bath him every day once for three or four dayes till the burning be whole, and let him not wet his feet during the cure.

Others use to prick the Spaven with a sharp pointed knife, then take a piece of a candle, and lay a piece of brown paper upon it, and with an hot Iron melt the tallow, and after annoint it with Butter. Others use first to prick the Spaven well, then to lay upon it for three or four dayes together, every day mans-dung: after that, lay to it Galbanum till the sore-matter and rhume, and the humour come forth a

forth: then wash it with Urine, and lastly, heal it up with Oyl and Honey boyled together, for that will bring on the hair.

Now to conclude, that which I have ever found to be the surest and the cleanest way to take the bone Spaven quite away, if it be ued with discretion and care, is to take of *Unguentum Apostolorum*, and of white Mercury, of each a like quantity, but of Mercury rather the more; mix them well together: then after you have cast your Horse, make a slit just the length of the Spaven, so that you touch not the master-vein: then opening it, and laying all the Spaven bare, with a sharp instrument scale the Spaven a little; then make a plegant of lint just so big as the excrescion or bone Spaven is: then spreading some of the Salve thereon, lay it upon the Spaven; then with dry lint defend all other parts of the member, especially the master-vein, from the corrosive: then lay the plaister of Pitch, Rozen, Turpentine and Hoggs greafe before spoken, round about his hoof, and so let him rest four and twenty hours: then take away all that medicine, and scaling the bone a little, if you find the corrosive have not gone deep enough, then dress it in the same manner the second time, and that will be altogether sufficient: then take of Turpentine, of Deersfuet, and of Wax, of each a like quantity, and mix and melt them well together, then dress the sore place therewith being warmed, and lint or tow dipt therein, and within a day or two you shall see the whole crust of the spaven come clean away, then may you with the same Salve, heal up the wound; and this hath never failed me in any practice. Also understand that whatsoever taketh away the Splint, taketh away the Spaven also.

C H A P. LXXXVI.

Of the blood Spaven, wet Spaven, or through Spaven.

THe blood Spaven, wet Spaven, or through Spaven, (for all is one disease) is a soft swelling growing on both sides the hoof, and seems as though it went through the hoof, whereby it is called a through Spaven; but, for the most part the swelling on the inside (because it is fed continually of the Master-vein) is greater than the

ling on the out-side. It proceedeth from a more fluxible and flegmy humour, and not so viscous and slimy as the other Spaven doth, and therefore this never waxeth hard, nor groweth to a bone, and therefore it is a much easier cure than the other. The signs thereof are like the other the apparent sight thereof; and for the cure, it is according to the opinion of the old Farriers, in this manner: First, wash the Spaven with warm water, and then dress it with Cantharides and Euforbium, in such sort as was at large shewed in the former Chapter; only you shall not boyl them, but only mix them together, and dress the sore therewith two dayes together; then annoint it with Butter, and after burn it with a hot Iron both without and within, in manner as is shewed also in the former Chapter; but you shall by no means tent it: then immediately you shall take up the master-vein, and let it bleed, as was shewed before; and then for the space of nine dayes, annoiart him every day once with Butter, until the burning begin to scale, and then wash it with this bath: Take of Mallows three handfulls, of Sage one handfull, and as much of red Nettles; boyl them in water until they be soft, then put thereto a little fresh Butter, and bathe the place every day once for the space of three or four dayes, and until the burning be whole, let the Horse come in no wet.

Other Farriers use, after they have shaved off the hair, and taken up the vein, to take of Mustard-seed, of the great Mallow root, and of Ox-dung, of each a like quantity, and as much strong Vinegar, as will mix them together like a Salve, then beat them all well together, and make thereof a soft plaister, or else an oyntment, and lay it upon the Spaven; change it evening and morning, and bind it in such sort to the sorrhance with some piece of cloath, that it may not fall off or be removed; and when the Spaven is clean gone, lay upon the place a plaister of Pitch very hot, and take it not off, until it fall away of its own accord. Other Farriers use unto this former medicine to add Oyl de bay, Turpentine, and Bole-armony.

And other Farriers use but only to take up the vein, both above and below the Spaven, and suffering it to bleed well; then to knit up the vein, and annoint it with Butter till it be whole, and it will consume the Spaven.

C H A P. LXXXVII.

A most rare and well approved Medicine, which will take away any blood-spaven whatsoever.

After you have taken up the vein, knit it fast above, and then cut it in sunder, you shall take of Lynseed two or three hand-fuls, and bruise it well in a mortar, then mix it with new Cowdung, and putting it in a frying pan, heat it well upon the fire, and very hot apply it to the Spaven, renewing it morning and evening till it bring the Spaven like a byle to impostumation, and to break it, then after it hath runn a day or two, you shall only apply to the sore a plaister of Pitch, till it be whole.

C H A P. LXXXVIII.

Of the Sellender.

THe Sellender is a certain kind of dry scab, growing in the very bent of the ham of the hinder Leg; and it extendeth out into ill-favoured chaps or chincks, which if it be not prevented by medicine, it will fret in sunder the sinews of the hoof: It is in all points like unto a Mallander, and it proceedeth from the self like causes, and requireth the self same cures; therefore look into the Chapter of the Mallander, and whatsoever you find there, that will cure the Mallander, the same will also cure the Sellender.

C H A P. LXXXIX.

Of the Hough Bonny.

THe Hough Bonny is a round swelling like a Paris ball, growing upon the very tip or elbow of the hoof, and commeth ever of some stripe or bruise; but especially when he beateh his hoof either against the post which standeth behind him, at the neather end of his stall, or against the bar which doth divide him from another Horse, which many Ramish Jades will do, when they seek to strike at the Horse which standeth next them,

Now the cure thereof is thus, according to the opinion of the old Farriers, take a round Iron somewhat sharp at the end, like a good big bodkin, and let it be somewhat bending at the point; then holding the sore with your left hand, pulling it somewhat from the sinews, pierce it with the Iron, being first made red hot, thrusting it beneath in the bottom, and so upward into the jelly, to the intent that the same jelly may issue downward out of the hole: and having thrust out all the jelly, tent the hole with a tent of flax dipt in Turpentine and Hogs grease molten together; and also annoint the out-side with Hogs grease made warm, renewing it every day once until the hole be ready to close up, making the tent every day lesser and lesser until it be whole. Now for my own part, both for this  forrance, or any other bruise in this part, I have found this cure ever the best: First, either with rotten litter or hay boyled in old urine, or else with a plaister of Wine-lees and Wheat-flower boyled together, to ripen the swelling, and bring it to putrifaction, or else to drive the swelling away, but if it come to a head, then to launce it in the lowest part of the softness, with a thin hot Iron, and so to let out the matter: then to tent it with Turpentine, Deers suet, and Wax, of each a like quantity molten together, laying a plaister of the same Salve over it, to hold in the tent until it be perfectly well.

C H A P. XC.

Of the Curb

A Curb is a long swelling a little beneath the Elbow of the hoof of the great sinew behind, hard above the top of the horn, which causeth the Horse to halt after a little labour: for the more his sinew is strained, the greater is his pain, and the more he halts, the lesser is his grief; it commeth as the Spavens come, either from descent, or from great burthens when the Horse is young, or else from some strain or wrench. The signs are the apparent view thereof; and the cure according to the old Farriers, is first to shave off the hair, then prick it with a steem in three or four places, and for three or four dayes together, lay unto it twice a day mans dung; then

then lay Galbanum to it likewise twice a day until it rot, and that the matter doth issue forth; then wash it with Urine: and lastly, heal it up with Honey and Oyl boyled together, renewing the same twice a day till the Curb be gone; and in any case let all your Salves be applied warm and new made, and if you make an issue with a hot Iron in the bottom of the Curb, it will not do amiss.

Others use to take a very hot Iron, and hold it as nigh the sore as may be, but not touching it: then when it is warm, vent it in six or seven places: then take a spoonful of Salt, half a spoonful of Nerve-oil, and a penny-weight of Verdigrease, and the white of an Egg; mix these well together, and dipping flax in the same lay it to the Curb, and this in few dressings will take it away. Other Farriers use to chafe and rub the Curb well with their hands: then take red Walt-wort leaves, and Burrage, and braying them well together, lay it to the Curb, renewing it once a day for a seven-night together. Others use to slit the Curb all the length, then take a piece of Linnen cloath, and wet it in wine made warm: then strow Verdigrease thereupon, and bind it to the sore, renewing it once a day until the Curb be gone. Others of the ancient Farriers take of Wine lees a pint, of Cummin half an ounce, and as much Wheat-flower as will thicken it, and stir them well together; and being made warm, charge the sore place therewith, renewing it every day once the space of three or four dayes, and when the swelling is almost gone, then draw it with a hot Iron made very thin, in this sort, and cover the burning with pitch and Rozen molten together, and layed on good and warm, and clap thereon some floss of the Horses color, or so nigh as may be gotten, and remove them not until they fall away of themselves; and for the space of nine dayes let the Horse rest, and come in no wet. Now there be other Farriers which to this last recited Salve, will add Tar, and it is not amiss, only it will not stick so well.

Now for mine own part, I have ever found this practice the best.

First, with a broad incle to bind the hoof strait a little about the top: then with a smooth hazel stick to bear, rub, and chafe the Curb: then with a steam strike it as deep as you can in two or three places

places of the Curb: then thrust out the corrupt blood; and after upon the point of your knife, put into every hole as deep as you can thrust it, the quantity of two Barly corns of white Mercury, and so lee the Horse rest four and twenty hours after; then after, only anoint the sore place with hot molten Butter till it be whole, once a day at the least. And likewise here understand, that whatsoever cureth the splint or Spaven, that cureth the Curb also.

CHAP. XCI.

Of the pains.

THe Pains is a certain ulcerous scab growing in the Pastorns of a Horse, betwixt the fetlock and the heel, full of fretting matterish water, and commeth only for want of good rubbing and clean dressing, after the Horse hath been journeyed in the Winter wayes, by means whereof the sand and durt remaining in the hair, fretteth the skin and flesh, and so breedeth to a scab; and therefore your Frisonds, and Flanders Horses and Mares, which are now so much in use with us for the Coach, are the soonest troubled with this Disease, if the Keeper be not much the more careful. The signs hereof are, his Legs, will be swoln and hot, the scab will be palpable to be felt, and the water will issue out of the scab; which water is so hot and fretting, that it will scald off the hair, and breed scabs where it goeth. The cure, according to the ancient Farriers, is: Take of Turpentine, Hogs greafe, Honey and black Sope, of each a like quantity, and having molten them upon a soft fire, take it off, and put in a little Bole-armony, finely beaten into powder; then work all these things well together with a stick in your right hand and a dish of Wheat-flower by you, that with your left hand you may put it in by a little at once, till you have made it thick like an Oynntment or soft Salve: then spread it upon a Linnen cloth, as big as the sore, having first cut away the hair, and made the sore raw, apply to the salve, and dress him thus once a day until it be whole.

This medicine is well approved to cure all sorts of pain Scratches, Mouldy heels, or any other skirvy scalls whatsoever, that may breed in Horses Legs or heels, whether they come by means of evil humours,

mours, or for lack of good dressing or clean keeping, whether they be mattery and filthy runing sores, or else dry scabs. Others of the old Farriers use for this sorrhance to take a pint of red Wine lees, and a handful of Wheat-bran, a saucer full of Honey, and half a pound of the powder of powdred Beef burnt, and as much of Bark dust, and half a pound of Allom, and a quarter of a pound of Swines greafe, and half a handful of Vervine: beat all these together in a Morter, and then fry them over the fire, and make a hot plaister thereof, and lay it to the sore as hot as the horse can suffer it, letting it abide there the space of three dayes, and in once or twice thus dressing him, it will make him sound; yet some hold, if you do with a hot drawing Iron fear the great vein over-thwart, a handful above the fetlock, and then take a spoonful of Tar, a spoonful of butter, and a spoonful of honey, and warming them well together, annoint the vein therewith every day till the cure be perfected, and it is much available.

Other Farriers use, first to wash all the Horses pastorns with Butter and Beer well warmed together, and then his Leg being somewhat dried, clip away all the hair that doth annoy the sore: then take of Turpentine, of Hogs greafe, and of Honey, of each like quantity; mingle them well together in a pot, and put thereunto a little Bole-armony, the yolks of two Eggs, and as much Wheat-flower as will thicken the things afore-said, and so by long working it, make it like a plaister; then spread it upon the Linnen cloath, and lap it round about the Horses pastorn, and bind it fast on with a rowler, renewing it once a day till the Horse be whole; and in no wise let the Horse come in any wet during the cure. Others use, first to chafe the sore place with a hay-rope, or with a hair cloath, till it either bleed or be raw; then take a little strong Mustard, Beane-flower, and fresh greafe, with a little Fenugreek; then mix all together in a dish, and make thereof a Salve, and therewith annoint the sore, until it leave mattering: then take Honey, the white of an Egg, and fresh Butter; mix them together, and annoint the sore place therewith until it be whole. Others use only to bathe the sore with Beef breath, and then for four or five dayes after, to annoint it with Sope, or else first to plunge his feet in scalding water twice or thrice: and then bathe the sore in scalding water: then have ready a hard roasted Egg, cleave it in the middst, and lapp it to as hot as you can, and let it lye bound all night; use this.

☞ this once or twice, and you may adventure to ride him. Others use to take Pepper, Garlick stampt, Colworts, and old Hogs greafe, of each like quantity, then beat them in a mortar till they be come to a Salve, and so lay it to the sore, renewing it once a day till it be whole.

☞ Others use first to take up the shackle-veins on both sides, then take the soft row of a red herring, and mustard, and black sope, and when they are well beaten together, boyl them in Vinegar till they come to a Salve, and apply it to the sore; this will cure the pains, albeit you do not take up the shackle veins. If you cannot readily get this Salve, you may take Butter and Honey molten together, and it will help them, or else take a pound of Hogs greafe, a penny-worth of Verdigrease, two ounces of mustard, half a pound of Oyl de bay, a quarter of a pound of Nerve oyl, half a pound of Honey, half a pound of English wax, one ounce of Arsnick, two ounces of red Lead, and half a pint of Vinegar; boyl all these together and make an oyntment of it: then having clipt and made the sore all bare, apply the medicine thereunto very hot, and renew it once a day until it be whole. Others use to take five ounces of Orpiment, five of Tartar, one of Verdigrease, half an ounce of Sulphur, as much of Vitriol made into powder, the juyce of four Citrons, the whites of two Eggs, with three ounces of Salet oyl; let all these be very well beaten together, and applyed once a day to the sore, and it will not only heal this disease, but any salt humour whatsoever. Mingle with soft greafe, Vinegar, Honey, Orpiment, and Arsnick; but let Arsnick be the least, and it will cure this disease, so will also white Wax, Turpentine and Camphora mixt together. Others use to take an hundred black Snails in the moneth of May, slit them, and put them in a bag with a pint of Bay salt, then hang them over the fire, with a Vessel set under to receive what drops from them, and keep it in a close glasse: then annoint the sore every day therewith, and it will heal this sovrance. Other take Honey and Vinegar, of each a like quantity, a little Oyl, and suet of a He-goat, of each alike, also boyl them with a soft fire and stir it well: when it waxeth red, add of Verdigrease and Vitriol, of each like quantity made into powder, stirring it till it be red and thick: then being warm, annoint the sore place therewith once a day after it hath been washed with warm water: and this not only helps the pains, but also

Also any sorrhance whatsoever of like nature about the Legs.

Also green Copperas and Roch allom, of each half a pound, and a handful of Bay-salt boyled in a gallon of running water, will heal it; or else unto it add a pint of Honey, and boyl it over again, and it will be the better; then when you have anointed the fore therewith, rub it with the powder of Glafs, Mustard and Vinegar mixed together, and afterward skin it with Cream, and the inner rinde of Elder beaten to a salve, which must be applied to the fore twice a day at the least.

C H A P. XCII.

Of the Mules or Kibe-Heels.

THese Mules, or Kybed heels, are certain dry scabs or chaps breeding behind upon the heels of a Horse, and so a little inward even to the Fetlock, in long chaps and chinks; it proceedeth either from corruption of blood, or from being bred in wet marriish grounds, or else from unclean and negligent keeping, in such manner as the Pains are bred; this sorrhance will make the Horse's Leg to swell much, especially in the Winter, and about the Spring time, and he will go stiffly, and halt much.

Now for the cure, you shall understand, that whatsoever healeth the Pains, the same will in like sort heal those Kybed heels; yet for more particularity, you shall know, that the old Farriers did use for this sorrhance, if they took it at the beginning, but onely to anoint it for two or three dayes with Sope, and then after to wash it with strong Urine, or Beef-broth till it were whole; but if it were of any long continuance, then first to cut away the hair, and lay the fore open and plain; then take two ounces of unslaked Lime, one ounce of Sope, and the white of an Egg, or else an ounce of unslaked Lime, and as much Salt, and three ounces of Soot, and mingling them with strong Vinegar, anoint the fore therewith, and it will heal and kill them.

Other Farriers use to calcinate Tarter, and dissolve it to water; then congeal it like Salt, and mingle it with Sope like an oyntment, and then dress the fore therewith, and this will in eight and forty hours heal any Mules, Pains, or Scratches whatsoever. If you take

the juyce of the leaves and roots of Elder, it is very good to dry up any of these evil humours.

C H A P. XCIII.

Of Wind-galls.

THe Wind-gall is a little Bleb or Bladder full of corrupt jelly, and like the white of an Egg growing on each side of the Master-knew of the Leg, hard above the Pastorn. Now of them some will be big, and some will be little, and there will be sometimes more than one or two of a cluster, and they are so painful, especially in the Summer season, when the Weather is hot, and the Ways hard, that the Horse is not able to travel, but halteth down-right; they proceed commonly from extreme labour in the Summer time upon hard Ways, whereby the humours being dissolved, do flow and resort into the hollow places about the neather joynts, which are most beaten and feebled with travel, and there are congealed and covered with a thin skin like a bladder; they are most apparent to be seen and felt.

 The cure thereof, according to the old Farriers, is to take a Knife, and open it in the length of a Bean, piercing no further into it than through the skin of the bladder, and then thrust out the jelly, which as I said before, will be like the white of an Egg; then take the yolk of an Egg, and as much Oyl de Bay as a good Nut, and mixing them together, make a Plaster thereof, and lay it to the sore, and in two or three dayes it will heal it. Others of the old Farriers dress it with Euforbium and Cantharides, in such sort as is shewed for the taking away of the splent; but if that will not serve, then with a hot drawing Iron to draw the Windegall in this sort;  then to open the middle Line with a Lancet, the length of a Bean, and thrust out the jelly; then lay Pitch and Rozen molten together upon it, and then a few flox, and that will take it clean away. Other Farriers use to take up the Master-veins on the inside of his Legs, and suffer him only to bleed from below: Then having put up the Vein, cover all his Leg over with a Plaster of Wine-lees and Wheat-flower mingled together, and rowl it with a long rowler; dress him in this sort once a day till it be whole.

Others

Others use to open the skin and put out the jelly; then take a spoonful of Oyl de Bay, a spoonful of Turpentine, a penny-worth of Verdigrease, the white of an Egg, and a quarter of an ounce of red Lead, boyl them together till it come to a salve; then lay it to the Wind-gall, and it will cure it; or else, after you have let out the jelly, take Rozen, Sheeps Suer, and Brimstone, of each alike, and melt them together, and lay that upon the Wind-gall, so it be not too hot, and it will cure it. Others take the roots of Cummin, and beat them well with a little Salt, and lay that to the Wind-gall; or else anoint them with the juice of Onions or Leek-blades, and that will allay them, or else ground-ivy and Worm-wood with the roots sod in Wine, and laid to the Wind-gall, will take them away. Others of our later experienced Farriers, take an ounce of white Wax, an ounce of Rozen, two ounces of raw Honey, three ounces of Swinesgrease, two ounces of Oyl of the yolks of Eggs, five ounces of Oyl de Bay; mix all these well together, and strain them; then rub them into the Wind-gall, by holding a hot bar of Iron against the Oyntment, and it will take the Wind-gall away. Now for the making of the Oyl of the yolks of Eggs, it is thus: First, seeth the Eggs hard, then stamp them, and seeth them in an earthen pot with a soft fire, and so strain them. Now this medicine will not only heal the Wind-gall, but the Ringbone also, it is very good for the abating of the Wind-gall, and for making the medicine to work the better, to let the Horse stand in a cold running stream an hour morning and evening. The scum of the four Salts sod in mans Urine, and laid to the Wind-gall, will take it away.

There be others which take a pottle of Vinegar, a pound of Orpiment, a quarter of a pound of Galles, and as much of the herb Molleyn stamped small, mingle these well together, and put them into a pot, then every day therewith bathe the Wind-gall, and in three weeks it will dry them clean up; it will also take away a Curb, or a Spaven, or a ring bone, if you take them at the breeding. Other Farriers take of Sevil Oyl and Brimstone, of each like quantity, and seeth them in mans Urine, and stir them well together; after put in the quantity of a Walnut of Sope, to keep the hair from scalding off; then bathe the Wind-gall with this hor, thrice together, rubbing it well in; then anoint it above with Nerve-Oyl, and Oyl de Bay, and make it, by holding to it a hot Bar of Iron, or a hot

Fire-pan, to sink into the flesh, and in three dayes it will dry up any Wind-gal.

Now for mine own part, the best Medicine I have found in my practice for this Serrance, and the easiest, is, with a fine Lancet to open the Wind-gal, making the hole no bigger than that the jelly may come forth; then having thrust it clean forth, lap a wollen wet cloath upon it, and with a Taylers hot pressing Iron, rub upon the cloath till you have made the cloath suck in all the moysture from the Wind-gal, and that the Wind-gal is dry; then take of Pitch, of Rozen, and of Mastick, of each like quantity, and being very hot, daub it all over the Wind-gal; then clap good store of flex of the colour of the Horse upon it, and so let the Horse rest or run at grafs till the Playster fall off by its own accord, and be sure the Wind-gal will be gone.

Now I would give you this for a Rule, that by no meanes you use to a Wind-gal, either Arsnick or Resalgar; for commonly then the Wind-gal will come again; neither must you burn much, nor make any great incision: For any of these will turn the soft substance of the Wind-gal to hardness, and then the Horse will be lame without cure.

C H A P. XCIV.

Of a Strain in the Pastorn joynt, or Fet-lock.

A Horse may be strained in the Fet-lock, or Pastorn-joynt; either by some wrench in the Stable, when the Planchers are broken under him, or by treading awry upon some stone, or upon some Cartrut, as he travelleth by the way. The signs whereof be these; The joynt will be swoln and sore, and the Horse will halt; and the cure, according to the old Farriers, is, take a quart of stale Urine, and seeth it till the foam arise; then strain it, and put thereto a handful of Tanfie, and a handful of Mallows, and a saucer full of Honey, and a quarter of a pound of Sheeps suet; then set it on the fire, and seeth them all together till the herbs be sodden soft; and then being very hot, lay this Paltus to the joynt, and cover it over with a blew cloath; and in three times dressing it will help the strain.

Other

Other Farriers take of Dialthea half a pound, and as much nerve oyl, mingle them well together, and anoint the sore place therewith, chafing it well with both your hands, that the Oyntment may enter in, continuing so to do every day once until the Oyntment be all spent, and let the Horse rest; but if this will not prevail, then they will use cantharides, as in case of the splint; but I do not hold that cure convenient, because it will make a double grief. Therefore I had rather you should take Pompilion, Nerve Oyl and black Sope, of each alike, and heat them hot on the fire, and then anoint the sore place therewith, and it will make the Horse sound.

C H A P. XCV.

To remedy any manner of halting that cometh by Strain, Stroak, or any other accident.

NOW forasmuch as halting is such a general Sorrance amongst Horses, that not any man that is Master of a Horse, but even in his smallest travel, is at one time or other vexed with the same, I will here before I do proceed any further, set you down certain general Receipts selected and culled out of the private practice and experiments of the best Farriers in Christendome, of which I may give the bolder testimony, because I have made practice of their virtues.

If then your Horse have taken any halt, either by stiffness of Sinews, Strain, Wrench, Stroak, or any other accident, if the grief be in his Leg, you shall take Smallage, Oxe-eye, and Sheeps fuet, of each a like quantity, chop them all together, and boyl it in mans Urine, and bathe all the Leg therewith; then with Hay-ropes wet in cold water, rowl up his Leg, and he will be able to travel the next day.

If you seeth a pound of black Sope in a quart of strong Ale till it look like Tar, and anoint the Leg therewith, it will supple the sinews, and bring them to their true course. If you wash his Limbs with the grounds of Beer or Ale made warm, and then rope them up with Hay-ropes wet in the same, it will recover a strain. If you take of the flower of Linseed, of Turpentine, and Life-honey, of each alike, and boyl them with white Wine until they be thick like unto.

unto an Oyntment; then spread it on a cloath, and lay it to the grief, and it will take away any ache or pain in the sinews; likewise a Plaister of Wine lees and Wheat flower, or a Plaister of black Sope and Boars greafe will do the like.

☞ If you mix Nerve Oyl, Oyl de Bay, and *Aquavita* together, and warm it, and chafe it in, and upon, and about the strain, it will take the anguish quite away. If the grief be in the shoulder, or the hinder Leg, then burn him upon the very joynt, by taking up the skin with a pair of pinsons, and thrust the skin through with a hot Iron over-thwart; and if this cure him not, then his pain is betwixt the thin skin and the bone, which must then be rowelled. If the grief be in the shoulder, or in the hip, or else-where, then let him bleed, and saving the blood, mix therewith the powder of Frankincense, and anoint the Horse with the same. If the grief be only in the sinews, then take the Plaister called Sologliatium, made of Gum-dragant, new Wax, Pitch and Turpentine mixed together, or else take the yolks of two Eggs, an ounce of Frankincense, and a little bran, and beat them well together, and lay it to the pain. If the grief do proceed from a hot cause, then let the Horse bleed, and with that blood mix Vinegar and Oyl, and anoint him, and chafe it well. But if it proceed from a cold cause, then let him bleed a little, and with Figs soaked a day in warm water, and as much Mustard-seed, make a Plaister, and lay it to the grief. If it come either by any rush or stripe, let the Horse bleed, and with that blood mingle strong Vinegar, Eggs, shells and all, three ounces of *Sanguis draconis*, four of Bole-armony, and five of Wheat meal, and daub it all over the sore place. If the grief be in the shoulder, and the skin broken, take Galls of Soria panned, and mingle them with Honey, and lay it to the sore. If his pain come from the stiffness of his joynts, take a pound of black Sope, and boyl it in a quart of Ale till it be thick, and it will comfort the joynts. If the joynts be swelled, then take Rozen, Pitch, Turpentine, and *Sanguis Draconis* molten together, and lay it to the swelling warm, and it will either take away the swelling, or else ripen it and make it run. If you take of the Oyl of Camomile, Oyl of Dill, Butter and Agrippa, of each a like quantity, or else make a Plaister of an ounce of Turpentine, half an ounce of Verdigrease, and the marrow of a Stag; or bathe the Horse with warm water, wherein Rosemary hath been sod, and ic

it will ease any pain whatsoever. If the Horses pain be in his shoulder, first with a Lancet prick the skin through between the spade bone and the marrow bone; then putting in a quill, blow the skin from the flesh, even all about; then thrusting out the wind with your hand, put in a Rowel; then take a pottle of stale Urine, seeth it with a pound of Butter, and as much Swinesgrease, and a handful of Mallows, a handful of Tansie, a handful of Vervin, a handful of red Nettles, a handful of Southernwoods, and a handful of Balm leaves, then beat them all well together, and so anoint his shoulder therewith, and let him not go forth of the stable for seven dayes. If his grief be in any nether joynt, then take a handful of Laurel leaves, and of Primrose leaves, of ground-Ivy, of Crow-foot, of Mallows, of red Fennel, and of fine Hay, of each of them several as much; seeth them well together, and then let them stand fourteen dayes, then bathe the joynt once a day, and bind on the herbs unto it four dayes together; then after chase into the joynt fresh grease and oyl mixed together, and it will ease all his pain. Now to conclude, if any joynt or member about a Horse be by any flux of humours swelled and grown out of shape, whereby the Horse goeth stiff and halteth; then to dissolve those humours, take Wormwood, Sage, Rosemary, the Bark of the Elm tree, and of a Pine, together with Lin-seed, and boyling these together make a Bathe or Pultus thereof, and lay it to the sick member, and it will dissolve the humours; and so likewise will Figs being stamped with Salt, and applied to the sore.

C H A P. XCVI.

Three Rare and Well-approved Medicines, which will cure any manner of Strain or Swelling whatsoever, be it hard or soft, by what accident soever it shall come.

IF the Strain be newly taken, you shall then take Vinegar of the best a pint, and of sweet Butter better than a quarter of a pound, and melt them over the fire; then with fine Wheat bran, make it into a Pultus upon the fire, and lay it as hot to the strain as the Horse is able to indure it without scalding; and do thus morning and evening till the strain be asswaged. But if the strain be of longer

continuance, then take Mallows, and Chick-weed, and boyl them either in the grounds of Ale or of strong Urine, and lay them very hot to the strain. Lastly, if your strain, by length of time, or evil Medicines, be grown, in mens imaginations, past cure, the sinews and swelling being bony, hard and knotted; then you shall take Peece greafe which is made of Shoo-makers shreds, and melting it on the fire, anoint and bathe the strain therewith very hot, not only chafing it exceedingly with your hand, but also holding a hot bar of Iron against it to make the Ointment sink in; then take a fine Linnen rowler, and rowl up the Leg gently; do thus once a day, and it will take away the greatest and most desperate strain that may be.

C H A P. XCVII.

Another certain approved Cure for any Strain whatsoever.

TAKE Boars greafe, Bolearmonick, black Sope and Nerve Oyle, of each a like quantity, boyl them well together, and then apply it hot to the grief, rubbing and chafing it in exceedingly, and also heating it in very well, either with a hot brick-bar, a hot Fire-shovel, or a hot Bar of Iron. And thus do once a day till the pain depart.

C H A P. XCVIII.

Of Enterfearing.

ENTERFEARING is either when a horse through a natural straitness in his pace, or through evil and too broad shooing, goeth so narrow behind with his hinder feet, that he heweth the one against the other upon the inside of his Legs, even with the Pastorn joynt; and by means of this hewing there groweth hard mattery scabs, which are so sore, that they many times make the Horse to halt much. The signs are the straitness of his going, and the apparentness of the scabs. Now the Cure consisteth as much in prevention as in salve: For the prevention, which is, to keep a Horse from hewing one Leg upon another, it consisteth only in the Office of the Smith, and the making of

of his hinder shooes, whereby he may go wider, and not touch : Of which we shall speak more at Large when we intreat of paring and shooing of each severall foot. For the salve, which is to cure the hurt being once received, it is thus : You shall take of May butter (if you can get it) or else fresh greafe, or fresh butter, with a quantity of Rozen, and as much Nerve Oyl ; then fry them all together in a pan, and then let it stand till it be cold, and put it in a pot, and put to it a little Cow dung ; and then Plaisterwise apply this unto the sore, renewing it once a day, and it will not only heal this sore, but also any prick by a nail whatsoever.

C H A P. XCIX.

Of the Shackle-gall, or Gall in the Pastorn, either by Shackle or Lock.

If a Horse be galled in the Pastorn, on the Heel, or upon the Cor-net, either with Shackle or lock, as it many times happens in the Champain Countries, where the Farmers use much to teacher their Horses ; then for such a fore you shall take Honey and Verdigrease, and boyl them together till the one half be consumed, and that it look red ; then after it is a little cooled, you shall anoint the sore place therewith twice a day, and then strow upon it a little chopt flox to keep on the salve. This is excellent for any gall whatsoever, and chiefly for the scratches.

C H A P. C.

Of hurts in the Legs, which come by casting in the Halter.

THe hurts which a Horse getteth by being cast in the halter, are many, and proceed from divers accidents, as when the reins of the Coller are so long and will not run to and fro, that the Horse gets one or both his fore Legs or hind Legs over them, and then with struggling, woundeth and galleth them much ; or else when a Horse having a desire to scratch his ear with his hinder foot, rubbing it to and fro, in the end fasteneth his foot either in the coller, or the reins, and then the more he striyeth to loosen it, the more he galleth and

and woundeth it, even sometimes to the very bone. Now for the cure, according to the opinion of the old Farriers, it is thus, Take of oyl olive one ounce, of Turpentine two or three ounces, melt them together over the fire, and then put thereunto a little wax, and working them all well together, lay it plaister-wise unto the sore, renewing it once a day until it be whole. Now there be other Farriers which only anoint the sore with the whites of Eggs and Saller-oyl mixed together; and then when the sore cometh to a scab, anoint it with butter being molten until it look brown.

Now for mine own part, the cure which I principally use for this sorrhance, is, to take of wax, of Turpentine, and of Hogs greafe, of each one ounce, and having mingled and molten them well together, put them into a pot; then take an ounce of Verdigrease beaten to powder, and an ounce of Hogs greafe, and mix them very well together, and put that into another pot; then when you dress the sore, take of the first salve two parts, and of the latter a third part, and mixing them well together in the palm of your hand, anoint all the sore place therewith, doing thus once a day till it be whole.

CHAP. CI.

Of the Scratches, Crepanches, or Rats-tayl.

THe Scratches, Crepanches, or Rats tayls, being all but one sorrhance, are long, scabby, and dry chaps or rifts, growing right up and down, and overthwart on the hinder Legs, just from the Fetlock unto the end of the Curb; and as the Pains are under the Fetlock, so the Scratches are above the Fetlock, and do proceed either from dry melancholy humours ingendred by outward filth, or else by fuming of the Horses dung, lying either near or under him. The signs are both the apparent sight and the easie feeling of the same, besides the staring dividing, and curling of the hair, as also that the sorrhance will stink much. The cure is, according to the opinion of the old Farriers, to take any of those former Medicines whatsoever, which are already recited, either for the Pains or Mules; yet for your more particular understanding, you shall know, these Medicines are most proper for this sorrhance. First, you shall shave away the hair, and make the fore raw; then take of Turpentine half a pound

pound, of Honey half a pint, of Hogs greafe half a quartern, and three yolks of Eggs, and of Bole-armony a quartern beaten into powder, of Bean flower half a pint; mix all these well together, and make a salve thereof, and then with your finger anoint all the sore places therewith, and let the Horse come in no wet during the cure.

Other Farriers use (and sure it is the better practice) first after they have shaved away the hair, and laid the sore raw, to wash it well with old Urine very warm, then take black Sope, Mustard, and Vinegar, of each a like quantity, and mix therewith some of an Oxe gall; then stir them well together, and chafe and rub the place therewith, and bind thereto a cloath, so use it once a day till it be whole; then after anoint it with Neats-foot Oyl to supple the sinews again. Others use to take the finest hay, and burn it to ashes upon a fair board, then mix it with Neats-foot Oyl, and make a salve thereof; then all to rub the sores until they bleed, and then anoint them with the said salve, and rope his Legs, and keep them from wet. Others use after they have washed the sore with old Stale, then to take a quantity of strong Mustard, Vinegar, gray-Sope, Barrows greafe and some Quick-silver; mix them together, and therewith anoint the sore.

Other Farriers take a quantity of unslacked Lime, half so much black Sope, and so much of strong Vinegar as shall suffice to make it like an Oyntment; then the hair being cut away, and the sore washed with Urine, lay to this Oyntment, renewing it not the space of two dayes, and it will kill the sorrhance; then wash the place once or twice with warm Wine; then after heal it with Turpentine and Hogs greafe molten together; and in no wise let the Horse come in any wet. Others use after they have washed the sore place with Urine, and clipt away the hair, and made the wound raw, to take Butter and Tar, of each alike, and boyling them together, anoint all the sore place therewith every day till it be whole.

Others take of Honey and Verdigreafe of each alike, and boyl them together until half be consumed, and then anoint the sore therewith once a day until it be whole. Others of our latter Farriers use either to shave off the hair, or scald it off with Orpiment and unslacked Lime boyled in strong lye; then wash it with warm Vinegar or white Wine, then when it is dry anoint it with this Oyntment.

ment. Take of Orpiment one ounce, of Verdigrease three ounces, of Soot five ounces, a little unsleckt Lime, and of Honey one pound; mingle them all well together upon a soft fire, and being made like an oyntment, use it as aforesaid once a day to the sore; or else take Honey, Sope, Verdigrease, unsleckt Lime and Vinegar, and boyl them with Allom, Galles, and Mail, till it come to a plaister, and then apply it unto the sore; or else boyl Salet oyl, with a little suet and sope, then skim it and take it from the fire; then add an ounce of Quick-silver resolved, two ounces of Verdigrease, three ounces of unsleckt Lime, and one ounce of white Wax: when all these are well mixt together, and made into a Salve, then apply it once a day unto the sore, until it be whole.

Other Farriers use after they have shaved the place, to boyl Vinegar and the skin of Lard or Bacon together; and apply that to the sore three dayes together; then take Lard, molten Litargy, Mastick, Verdigrease and Soot mingled together, with Goats milk, and lay it to, renewing it once a day until the sore be healed. The scraping of a panns bottom mixt with the inner pills of Elder, are also good for the scratches; or new mans dung applyed for five dayes, and after anoint the sore with oyl and sope mixt together. Others take of unsleckt Lime, the powder of Glass, and of Verdigrease, of each one an ounce; of Orpiment an ounce; of Oyl and of fresh grease, of each four ounces; mix all these well together, and apply it to the sore until it be whole: If you take black snails and barr roots and beat them together, it will also help this sorrhance. Other Farriers take an ounce of Sope, two ounces of unsleckt Lime, and as much Lye, or strong Vinegar as will temper it, and so dress the sore until it be whole. Others take Fenugreek and beat it, three oranges cut in pieces, half a pound of Sheeps suet, new Sheeps dung; boyl all these in the grounds of good Ale, and then bathe the Horse therewith ashot as may be: then rope him up with hay ropes, and so let him stand three dayes, then bathe him so again.

 Others take Hogs grease, Sope, Brimstone, Soot, and Honey, boyl them and lay them to cool, you may also add Verdigrease; but before you lay on this oyntment, scrape the scabs off, and make them bleed, and rub them with Sope, Mustard, and Vinegar mixt together.

C H A P. CII.

A most certain and approved cure for the Scratches:

After you have cut away the hair, rub off the scabs, and wash the fores with old Urine, Allom and Salt mixt together, and applyed as hot as the Horse can suffer it; Then take the tops and tender buds of Elder, and the green brier Berries, and boyl them in a potle of new wort, and put thereto good store of Allom, and with this hot, wash the Horses Leg once, twice, or thrice a day, and it is a certain cure.

C H A P. CIII.

Of the Ring bone.

THe Ring bone is a sorrhance, which appeareth above upon the Cronet of the hoof, being a certain hard gristle growing sometimes round about the same. It proceedeth as some Farriers hold opinion, either from some blow of another Horse, or by striking the Horses foot against some stab or stone, or such like accident: But surely I hold that it also proceedeth from some imperfection in nature, for as much as I have seen many foals foaled with Ring bones on their feet; These Ring bones do breed a viscus and slimy humour, which resorting to the bones that are of their own nature cold and dry, waxeth hard, and cleaveth to some bone, and so in process of time becommeth a bone. The signs of the sorrhance are, the apparent sight of the sorrhance, being higher than any part of the cronet, the staring of the hair, and halting of the Horse.

The cure, according to ancient Farriers, is, first to scarifie the skin above the Ring bone with a Lancet; then take a great Onyon and pick out the core; then put into it Verdigrease and unselect Lime; then cover the hole, and roast the Onyon soft, then bruise it in a mortar, and so very hot lay it to the ring bone: do thus four dayes together, and it will cure it. Others of the old Farriers use first to wash the sorrhance with warm water, and shave away the hair: then scarifie it lightly with the point of a Razor, so as the blood may issue forth;

forth: then dress it with Cantharides and Euforbium, in such sort as hath been taught for the splent, using him, and curing him after the same manner; but when the hair beginneth to grow again, then draw the sore place with a hot drawing Iron in straight lines, from the Pastern down to the coffin of the hoof, in this manner: and let

the edge of the drawing Iron be as thick as the back of a meat-knife, and burn him no deeper than that the skin may look yellow: that done, cover the burning with Pitch and Rozen molten together, and clap thereon flox of the Horses own colour, and about three dayes after, lay again some of the last mentioned Plaister, and also new flox upon the old, and there let them remain till they fall away of themselves. Others use to shave off the hair, and to scarifie the sore with a Lancet till it bleed: then strew upon it the powder of Tarter, and Salt, of each alike mixt together, and bind it straight: then after anoint it with fresh grease, or else soften the Ring bone with the skin of old Bacon, the fat being scraped off, that you may see through the skin, and laid to after it is shaven and made bleed, after launce it, and let out the Ring bone. Others use to launce the skin with a Razer, then opening the skin with a Croner, prick the Ring bone: Lastly, strew upon it the powder of Virriol, and bind it on so as it may not stir for nine dayes; then thrust out the matter which is dissolved. Lastly, wash it with Salt, with Urine and Vinegar mixt together. Other Farriers do use after they have shaved it, to lay unto it a plaister made of Bran and Honey, with the young leaves of Worm-wood, Pellitory, and Brank-ursine mingled with Swines grease, and beaten together, and boyled, and used as hot as the horse can suffer it. This medicine will not only cure the Ring bone, but any other swelling whatsoever. Also a plaister of the leaves of Smallage being beaten to pieces, is not only good for this sorrhance, but for any wind-gall also. To wash a Ring bone continually with strong Vinegar will abate it: or else to shave away the hair, and take half a Lemmon, and sprinkle Arsnick thereon, and lay it to the Ring bone, and it will eat it away; if twice or thrice a day you bind a hard Egg burning hot unto the Ring bone, it will take it away. Lastly, if you take Euforbium, and mingle it with oyl of Juniper, Salt and Pepper, and so apply it to the Ring bone, it will in a very short space consume the Ring bone quite away;

way; always provided that you keep the Horse from any wet during his cure.

C H A P. CIV.

Of hurts on the Cronet, by crossing one foot upon another.

IF your Horse by crossing one foot upon another, chance to wound or hurt the Cronet of his hoof, you shall then, according to the opinion of the old Farriers, first wash it well with white Wine, or with warm Urine, and then lay unto it the white of an Egg mixt with Chimney soot and salt; and that if it be renewed once a day, will in two or three dayes dry up the sore. Other Farriers use first to pare or cut away the hoof, that it touch not the hurt, and keep it clean from filth by washing it with Urine: then seeth two Eggs hard, and take off the shells, then press them with your hand long, and first roast one hot, and tye it to hard; when that is cold, use the other: after make a plaister of soot, Salt and Oyl boyled together, and lay it to the sore, renewing it once a day until it be whole.

C H A P. CV.

A most certain and approved cure for any hurt upon the Cronet whatsoever.

TAke of Sope and Salt of each a like quantity, and mix them together like a paste, then having cut out the over-reach or hurt, and laid it plain, first wash it with Urine and Salt, or Beer and salt, and with a cloath dry it, then bind on the mixt Sope and Salt, not renewing it in 24. hours, and thus do (if the wound be great) for 3, or 4. dayes together: Then having drawn out all the venom (as this Salve will quickly do) then take a spoonful or two of Train oyl, and as much Ceruse, which we call white Lead, and mix it together to a thick Salve: then spread that upon the sore morning and evening till it be whole, which will be effected suddainly: for nothing doth dry up sooner, nor is more kindly and natural for the breeding of a new hoof.

C H A P. CVI.

Of the Crownscab.

THe Crown scab is a stinking and filthy scab, breeding round about the corners of the hoof, and is a cankerous and painful sorrhance, it cometh oft times by means that the Horse hath been bred in a fenny marish ground, where the cold striking corrupt humours up to his feet, ingendreth this sorrhance, which is ever more painful in the Winter than in the Summer. The signs are, the hairs of the Cronet will be very thin and staring like bristles, and the Cronets will be alwayes mattering and run on water. Now the cure, according to the opinion of many Farriers, is, to take the skin of Bacon, and lay thereon soot and salt beaten together, mingled with grease or suet, wax, and Pitch molten together, and if the flesh chance to grow proud, eat it away either with Verdigrease beaten to powder, or with the scrapings of a Harts horn, or an Ox horn made into fine powder.

Other Farriers use to take of Sope, and of Hogs grease, of each halfa pound, of Bole-armony a little, of Turpentine a quartern; mix them well together, and make a plaister, and bind it fast on, renewing it every day once until it leave running; and then wash it with strong Vinegar being luke-warm, every day once until the sore be clean dryed up, and let the Horse come in no wet until the sorrhance be whole. Others use only to bathe it continually with old stale sod with Salt, and that will dry up the humour and heal it.

C H A P. CVII.

Of the Quitter-bone.

THe Quitter-bone is a hard round swelling upon the Cronet of the hoof, betwixt the heel and the quarter, and groweth most commonly on the inside of the foot: It breederh most commonly by means of Gravel gathered underneath the shooe, which fretteth inward, and forceth an Ulcer to break upward: or else it com-

commeth by the cloying or pricking of some nail driven by an ignorant Smith, the anguish whereof loosenech the Gristle, and so breedeth evil humours, whereof the Quitter-bone springeth: the signs are, the Horse will halt much, and the swelling is apparent to the eye, which in four or five dayes commeth to a head, and will break out with matter at a little deep hole like a Fistula; and surely then this Quitter-bone, there is no outward Sorrance whatsoever more dangerous to a Horse. The cure thereof, according to the opinion of some of the ancient Farriers, is, first to cut the hoof to the quick, then seeth a Snake or an Adder till the flesh part from the bone, and be molten as an unguent; then anoint the sore place therewith very warm even to the bottom, and during the cure, keep the foot clean from any filth; for this both drieth and killeth the Quitter-bone. Other of the old Farriers, first burn about the Quitter-bone with a hot Iron in manner of a half Circle, and then with the same Iron draw another right through the  midst thereof in this sort: then take of Arsnick the quantity of a Bean beaten into fine powder, and put it into the Hole, thrusting it down to the bottom with a quill, and stop the mouth of the hole with a little tow, and bind it so fast with a cloath and a rowler, that the Horse may not come at it with his mouth, and so let it rest for that day; and the next day, if you see that the sore looketh black within, then it is a sign that the Arsnick did work well; then to allay the burning of it, rent the hole with flax dipt in Hogs grease, and Turpentine molten together, and cover the rent with a Plaister of Pitch, Rozen, Wax and Turpentine molten together, but there must be as much Turpentine as of all the rest: and thus you must continue to do until you have gotten out the core, which the Arsnick did eat; then you shall see whether the loose gristle in the bottom be uncovered or not: and if it be not uncovered, then feel with your finger, or with a quill whether you be nigh it or not; and if you be, then raise the gristle with a little crooked instrument, and pull it clean out with a pair of small nippers, or mullets made for the purpose: that done, thrust it again with a full tent, dipt in the aforesaid oyntment, to assuage the anguish of the last dressing, and stop it hard to the intent that the hole may not shrink together or close up: and the next day take out the tent, and rent it anew with Honey and Verdigrease

boyled together till they look red, renewing it every day once until it be whole, keeping alwayes the mouth of the sore as open as you may, to the intent that it heal not up too fast, and let not the Horse come in any wet, nor travel until he be perfectly whole. Other Farriers use to cut the hoof open to the quick; then take *Galbanum*, *Sagapenum*, pitch of *Grece*, *Olibanum*, Mastick, Oyl and white Wax, of each one ounce, with half a pound of Sheeps suet; melt them upon a soft fire, and incorporate them well together, and therewith dress the sore place until it be whole. Others use after the sore is opened, to put in salt of Tartar, and when it hath eaten away the Quiter-bone, to heal it up with Honey and Verdigreale boyled as aforesaid. Others take of Goats dung two ounces, of Sheeps tallow three ounces, and as much strong Vinegar as will suffice to boyl them well in, and then therewith to dress ths Quiter-bone until it be clean whole.

C H A P. CVIII.

Of gravelling a Horse.

GRavelling is a certain fretting of gravel, sand, or dart, under the foot, betwixt the sole and the shooe, sometimes on the inside, sometimes on the out-side of the foot, and sometimes on both sides of the heel. It commeth as I said, by means of little gravel stones getting between the hoof, or calking or sponge of the shooe, which by continual labour and travel of the Horse, doth eat through the hoof into the quick of the foot; and the rather, if the Horses heels be soft and weak, or that the shooe do lye flat to his foot, so as the gravel being gotten in it, cannot get out again.

The signs whereof are these, the Horse will halt much, and cover to go most on his toe to favour his heel, and the softer the way is, the more is the Horses ease. Now for the cure, according to the old Farriers, it is thus; first pare the hoof till you may see the sore, then take an ounce of Virgin wax, and a quarter of an ounce of Rosen, and a quarter of Deers suet, and half an ounce of Boars grease, and beat them all well together in a mortar, and then melt them together on the fire; that done, dip good store of flax therein, and so stop up the sore close and hard, and then you may travel the Horse
whither

whither you please; and do thus once a day until the foot be found. Other of the old Farriers use first to pare the hoof, and to get out the Gravel with a drawing knife, leaving none behind; then stop the sore place with Turpentine and Hogs grease molten together, and laid on with a little tow or flax, and then clap on the shooe, to keep in the stopping, renewing it every day once until it be whole, and suffer the Horse to come in no wet until it be healed. Now you must understand, that if a gravelling be not well stoppt to keep down the flesh, it will rise higher than the hoof, and so put the Farrier to much more pain, both in bolstring it, and abating that ill grown substance.

Others use only to pare the foot, and pick out all the gravel clean, then wash it well with Beer and Salt; then melt into it Tallow, Rozen, and Pitch: then covering it hard and close with flax, set on the shooe again, and do thus once a day. Others use after they have cleansed the sore, to lay hurds into it, being dipt in the whites of Eggs, then after heal it with Salt bearen small and mixt with strong Vinegar, or else with the powder of Gallies, Salt, and Tartar mixt together, which also is good for any cloying or pricking.

C H A P. CIX.

Of surbating.

Surbating is a continual beating of the hoof against the ground, and it commeth sometimes by means of evil shooing, lying too flat to his foot, or by going long bare-foot; and sometimes by the hardness of the ground, and the high lifting of the Horses feet, either in his trot or in his amble; and the Horses which are most subject to this sorrhance, are those which have either great round feet, or such as are flat footed, the Coffins whereof are weak and tender, and also those which have weak heels. The signs of the grief are, the Horse will halt much, and go creeping and stiff, as if he were half foundred.

The cure, according to the opinion of the old Farriers, is, to roast a couple of Eggs exceeding hard, and then in the very violence of their heat, to burst them in the Horses feet, and then pour hot boiling Saller oyl also amongst them, and so stop the shooe up close with

a piece of leather, and two cross splents of wood, and do thus thrice in one fortnight, and it will help him.

Other of the ancient Farriers take off the Horses shooes, and pare him as little as may be; and if the shooes be not easie, that is to say, long, large, and hollow enough, then make them so, and tack them on again with four or five nails: that done, stop his feet with Hogs grease and bran boyled together so hot as may be, and also cover all the coffin round about with the same, binding all in together with a cloath, and a list fastned about the joynt, renewing it every day once until it be sound; and give the Horse during the cure, warm water to drink, and let him stand dry, and not have much travail.

 Now if your Horse surbait in your travel, if every night you stop his feet well with Cows dung, or with Cows dung and Vinegar, it will make him endure out his journey; or Cows dung and new laid Eggs beaten together.

C H A P. CX:

Of the prickle in the sole of the Foot, either by treading on a nail, or any other sharp thinge.

IF a Horse in his travel chance to tread either on a stub, nail, thorns, or any other sharp thing whatsoever, by means whereof he is prickt in the sole of the foot, the Rider shall perceive the same by the suddain faultring of the Horse, who will instantly stand still and lift up his foot, as desiring help: And if it chance at any other time, then the halting of the Horse, and the diligent searching of a careful Farrier must find out the mischief.

Now the Cure, according to the opinion of the ancient Farriers, is, first to pull off the shooe, and pare the foot, and with a drawing knife uncover the hole, making the mouth so broad as a two-pence: then tack on the shooe again; that done, do it by pouring into the hole Turpentine and Hogs grease molten together, and lay some flax or tow upon it; and then stop all the Horses foot with Cows dung, and so covering it with a piece of leather, splint it with two cross sticks, so as the stopping may abide in, renewing it every day once until it be whole, and let the horse tread in no wet.

Now.

Now you must be very careful in the curing of this sorrhance; For if it be not healed from the bottom, besides, that it is dangerous to the life of the horse, it is also a great hazard that the sore will break out at the top of the hoof, and so loosen the hoof round about, and perhaps make it to fall clean away; but if you see that it begin to break out above, then make a greater issue beneath, by opening the hole wider, and taking more of the sole away, that the flesh may have the more liberty: then take of Bole-armony half a quartern, and of Bean-flower as much, and two Eggs: beat them, and mingle them well together, and make a plaister thereof upon tow, and lay it round about the Croner, bind it fast on, and so let it remain the space of two dayes, and then renew it again, not failing so to do every two dayes until you see it wax hard and firm above: for this plaister being restrictive, will force the humours to resort alwayes downward; which humours must be drawn out with Turpentine and Hogs grease as before, until it leave mattering, and then dry it up with burnt Allom beaten into powder, and strewed upon the sore, with a little flax laid again upon that, continuing so to do every day once until it be hardned; and let not the Horse come in any wet until it be whole.

Other Farriers use to tent the sore with Tallow, Tar, and Turpentine being molten together, and anoint all the coffin and croner of the hoof with Bole-armony and Vinegar beaten together, till the sore be whole, especially if the thing which did prick the Horse was venomous or rusty.

C H A P. CXI:

To draw out either Stub, Thorn, or Iron, either out of the foot, or any other part of the body.

IF either the Scrub, the Thorn, the Iron, or any thing whatsoever, wherewith your Horse is wounded, be gotten so deep into the flesh, that you cannot get hold upon it to pull it out; then according to the opinion of the old Farriers, (if you find that albeit it be too deep, yet it is not much too deep) you shall take a good quantity of black Sope, and lay it to the sore for a whole night, and it will make it to appear, so as you may pull it out with a pair of nippers: but

but if it lye very deep, then you may open the place with a Lancer, and thrusting in your mu'lets or nippers, pull it out by strength, and afterwards heal up the wound as was before taught in the last Chapter.

Other Farriers say, that the roots of Reeds being stamp'd and mix'd with Honey, will draw out any stub or nail: so will also black snails, being stamp'd and wrought with fresh Butter. Now if the place be much swoln, then it is good to mollifie it with a plaister made of Worm-wood, Parietory, Bears foot, Hogs grease, and honey well boyled and mix'd together, which will assuage any new swelling that commeth by stripe, or otherwise. Now when you have gotten out that which you sought for, then you shall pour into the wound scalding oyl of Olive; when that is cold, pour into it as hot Turpentine; when that is cold, strew on the powder of Sulphur, and then bolster his foot or the sore with hurds, and keep it from all wet and filthiness.

C H A P. CXII.

Of the Fig.

IF a Horse having received any hurt, as is before said, either by stub, great nail, thorn, bone, splent or stone, either in the soles or any other part of the foot, and be not well dressed, and perfectly cured, there will grow in that place a certain superfluous piece of flesh like unto a fig, full of little white grains, as you see are in a fig. The cure whereof, according to the opinion of the ancient Farriers, is, first with a hot Iron to cut the fig clean away, and keep the flesh down with Turpentine, Hogs grease, and a little Wax molten together, and laid on with a little tow, stopping the hole hard that the flesh rise not, renewing it once a day until the sore be whole.

 Now other of our latter Farriers use after they have, as before is said, cut away the fig, then to take the crops of young Nettles, and chopping them very small, lay them upon a cloath just as big as a Fig; then take the powder of Verdigrease, and strew it thin upon the chopt Nettles, and so binde it to the sore, renewing it once a day until the hoof have covered the sore, and this is a most certain cure.

CHAP.

C H A P. CXIII.

Of a Retrait.

A Retrait is, when a Horse by the ill government of the Smith, is pricked in the foot with some ill driven nail, yet in such sort, that it is immediately espied, and the nail drawn back again; and although it proceedeth ofttest from the negligence of the Smith, yet it may also come by reason of the weakness of the nail, and the hollownes of the shank: for when the nail is a little too weak, the point many times bendeth awry into the quick, when it should go right forth; and when it is hollow, it shivereth in the driving into two parts, whereof one part razeth the quick in pulling out, or else perhaps breaketh asunder, and so remaineth still behind. And this kind of pricking is the worst of all other, because it will rangle worst, in as much as the flaw cankereth, and remaineth still in the foot. The signs hereof are; First, the apparent shrinking and struggling of the Horse, so soon as the quick is touched; and next his much halting: Lastly, you shall search his foot with a Hammer, by knocking on the clenche of every nail: for when you knock upon that nail where the grief is, the horse will shrink up his foot; and if that will not serve, then grope the hoof with a pare of pinsons round about until you have found the place grieved. Now the cure, according to the opinion of the ancient Farriers, is, first to pull off the shooe, and then open the place grieved, either with a Butteris, or with a drawing Knife, so that you may perceive either by feeling or seeing, whether there be any piece of nail or not; if there be, then pull it clean out: After take of Nettles half a handful, and bruise them in a Mortar, and put thereto a spoonful of red Vinegar, and a spoonful of black Sope, and two ounces of Boars grease, or the fat of salt Bacon, and Bray all these well together, and stop well the hole of the sore with this, and then tack on the shooe again, and you may safely adventure to travel him. Other Farriers use, after they have opened the sore, to stop the hole with Turpentine, Wax, and Sheeps Suet molten together, and so poured hot into the hole; and then lay a little Tow upon it, and clap on the shooe again, renewing it thus once every day until it be whole; during which time, the
Horse

Horse must not come in any wet, and it must be stopped in this sort, though it be but a prick, without any piece of nayl remaining; and if for lack of looking to in time, this Retrait causes the horse to break out, then you shall cure it either with a restrictive Plaister of Bole-armony, Bean-flower and Eggs, mentioned in the 78 Chapter, or else with chopped Nettles and Verdigrease spoken of in the last Chapter.

Now there be many Farriers, which not only for this Retrait, but for any prick in the Horses foot, use after they have laid open the wound, to take of Turpentine one ounce, of Tar one ounce, of pitch one ounce, of Beef suet one ounce, and one head of Garlick, boyl them all together, and lay them to it so hot as may be suffered: and if it chance to break out above the hoof, then apply also the same Medicine unto it, and it will cure it.

C H A P. CXIV.

Of Cloying.

A Horse is said to be cloyed with a Nayl, or pricked with a nayl, when the whole Nayl is stricken into the quick of the foot, and so remaineth still in the same, and is clinched as other Nayls be, by means whereof the horse halteth extremely. Now this grief is known by searching the grieved place with a hammer or Pinsons, as is before said. Now for the cure, according to the opinion of the old Farriers, it is thus; If the horse halt immediately, then pull off his shooe, and open the hole until it begin to bleed, and then stop the hole with Turpentine, Wax, and Sheeps suet molten together, and poured in very hot, renewing it once a day until it be whole, and let the Horse tread in no wet, and let his shooe be tacked on again as soon as he is drest. Others use only to pour into the hole hot scalding Butter, and that will heal it, or else to burn the hole with another Nayl, and that will heal it. Other Farriers use, after they have opened well the sore, to take half a pound of Frankincense, a pound of Rozen, a pound of Pitch of Greece, half a pound of black Pitch, a pound of new wax, a pound of Goats grease, half a pound of Varnish, half a pound of Turpentine, two ounces of Oyl Olive, and melt them all together, and lay this to the hoof Plaister-wise, and

and it will not only heal any prick whatsoever, but also any cracks, chinks or clifis in the hoof howsoever they breed; provided that you let the horse tread in no wet during the cure: But if the sore chance to break out on the top of the hoof, then you shall take two or three yolks of Eggs, whites and all beaten together, and add thereunto an ounce of Bole-armony, and as much Bean or Wheat-flower as will thicken the same; then make a Plaister thereof two fingers broad, and as long as will go round about on the top of the Horses hoof, bind it fast on with a rowler, and renew it once a day until it be whole.

Other Farriers use, after they have searched and laid open the wound, to put into it hurds dipped in the white of an Egg, then stop the hole with Salt beaten very small, mingled with Vervine and strong Vinegar, and cover it with flax dipped in strong Vinegar; or else holding up the Horses foot, pour into the wound hot scalding Oyl Olive; and when that is cold pour in hot Turpentine, and that being cold strew upon it the powder of Sulphur, then lay on the bolster of flox, then shoee him, and keep him from treading in any wet.

Others use to take Tallow, the powder of Sulphur, Mallows, and very strong Vinegar; boyl them together until they be thick like an Oynment; then lay the same to the sore as hot as the Horse can indure it, renewing it once in twelve hours till it be whole.

Others use to take of Honey and Vinegar, of each a like quantity, a little Oyl, and suet of a hee-Goat, boyl them with a soft fire, and stir it: when it waxeth red, add Verdigrease and Vitriol, of each alike made into powder, still stirring it till it be thick and red; then stop the sore every day therewith until it be whole, after you have washed it well with Salt and Vinegar. Others take Pepper, Garlic and Cabbage leaves beaten with Swines grease, and lay that to the sore: or else take Tallow and Horse-dung, and mixing them well together, stop the sore therewith, and in short space it will cure it.

Other Farriers use to take off the shoee, and having opened the sore, to wash it with Wine: then lay upon it the inner rine of elder, and through that melt in grease with a hot Iron: then tack on the shoee again, and do thus divers dayes together, and it is a certain cure.

C H A P. CXV.

General Observations for the Feet and Hoofs of a Horse:

FOrasmuch as the Feet and Hoofs of a Horse are the only Instruments of labour, and that, a small grief in that part deprives a man of the benefit and use of the rest; I think it not amiss before I speak of the particular diseases of the Hoofs, to shew you some general notes and observations which you shall observe for the benefit of the feet. Know then, that first it is meet, that you let your shoes before be rather short than too long, with strong Spunges, but no cawkins, and your nails, to have special good heads.

Let your shoes behind have no cawkin on the out-side; but if he enter-fear, let the cawkin be on the inside, to make him cast outward, and let the inside of that side inward have a welt an inch deep, or be twice as thick as the out-side: but if all this help not his enter-fearing, then bring him unto an Amble; but if he will not amble, burn him with a hot Iron between the Legs, that the soreness thereof may make him go wide behind, which is an ordinary practice amongst the Italians and Frenchmen.

Let your shoes be made of Iron that will not break, of which our English is the best, the Spanish next, and the Dansk worst. Let them also be light, yet so, as they may be able to bear the burthen of the Horse, being broader at the toes, than at the cawkins or spunges.

Let your cawkins be short, and blunt at the points, and your spunges long and thick.

Let your shoe be full as strait as the horn of the hoof, so far as the Nails go, and from the two heel Nails backward, Let the shoe be broader than the hoof, that the shoe may be without the horn.

Give unto every shoe nine nails, on each side four, and one in the middest, and let the shanks of the nails be very flat and thin, that if the hoof be naught, they may yet keep the shoe firm with little hold; and the neerer that your nails are driven backward towards the heel, (so it be without danger) the faster the shoe will sit, and the harder to be pull'd away.

Let

Let your cawkins sit a straws breadth behind the corner of the coffin, and let your nail head enter into the shooe, especially on the outside, and by all means hollow your shooe so little as possible you can.

Pare very little or nothing at all from the heel of a horse : yet open his heels as sufficiently as may be, because ever the heel must be chick, and the toe thin.

In fait wayes pare the sole thin, but in Frost, or stony wayes, pare as little as may be:

To conclude, when the hoof is higher on the out-side than on the inside, it will make a horse enter-fear, and when it is higher on the inside, it will make a Horse straddle, so that a fair smooth rable is of all most convenient. After travel, ever stop the inside of the hoof with Cows dung, and rub the out-side and the Cronet with the sward of fat Bacon : for that will keep a tough, smooth, and a sound hoof. As your nails have strong heads, so let them have thin shanks, for that will best prevent hurting, and keep the shooe close unto the hoof. 

C H A P. CXVI.

Of loosening the Hoof, and how to make the Hoofs grow.

A Hoof is said to be loosened when there is a dissolution or parting of the horn or Coffin of the hoof from the flesh, at the setting on of the Cronet. Now if this dissolution or parting be round about the Cronet, then it proceedeth by meanes of some foundring; but if it be but in part, then it proceedeth from some anguish, caused either by the pricking of some channel nail, or other nail piercing the sole, or quarters of the foot, or by some Quitter-bone, retrait, gravelling, or cloying, or such like accident. The signs of the disease be these: When it is loosened by foundring, then it will break first, and the dissolution will appear on the fore-part of the Cronet, right against the toe, because the humour doth cover alwayes to descend towards the toe; but if it proceed from pricking, gravelling, or such like, then the hoof will loosen round about equally, even at the first; but when it proceeds from some Quitter-bone, or hurt upon the cronet, then the Hoof will break

right about the place that is offended, and most commonly will go no further.

Now the cure, according to the opinion of the ancient Farriers, is, of what cause soever the loosening proceed, first, to be sure to open the hoof in the sole of the foot, so as the humour may have free passage downward; and then to bind about the top of it, the restrictive plaister spoken of in the seventy eighth Chapter, and in the 117. Chapter, and in such sort as is there written, and then heal it up with Turpentine and Hogs greafe molten together. Others of the ancient Farriers take three Spoonful of Tar, and a quarter of a pound of Rozen, and half a handful of Tansie, and half a handful of Rue, and half a handful of red Mints, and half an handful of Southernwood, and bray all these together in a mortar: then add half a pound of Butter, and a penny-worth of Virgins wax; then mele them all together over the fire, until it come to a thick plaister or salve: then spread some of it upon a cloath, and lay it to the sore, renewing it once a day for seven dayes, and it will heal it.

Others use to take the brains of a Swine, or a Pig, and to stop his hoof very well therewith three dayes together, renewing it twice or thrice a day, and it will grow fast, and endure as well, or rather better than ever it did. Other Farriers use to cut out the sole below, Letting it bleed well; after stop it with hurds dipt in the whites of Eggs: tye this to for twenty four hours, then wash it with strong Vinegar warm, after fill it with Tarter and Salt, of each a like quantity, let that remain in two dayes; then anoint it with the oynment made of *Olibanum*, Mastick, pitch of Greece, of each alike, and a little *Sanguis Draconis*, and of new Wax and Sheeps suet as much as of the first, and melt and boyl them very well together, and let this oynment be applyed once a day till the sore be whole. But if you perceive that any new hoof come, then cut away the old, lest the hardness, of the one hinder the tenderness of the other; and then anoint the new hoof with suet, oyl, and wax, of each alike boyled together, to make it grow; or else with pitch of Greece, Mastick, *Olibanum*, *Sanguis Draconis*, and *Galbanum*, of each alike, being molten with suet: for this will make the new Hoof to grow also.

So will also new Wax, Honey, Oyl, Swines greafe, and Sheeps suet, being boyled together, and when it is cold, add Mastick, *Sanguis*

Sanguis Draconis, and Frankincense, and incorporate them altogether, for nothing sooner than this will make either new or old hoofs grow. Others use to take Shel-Snails, and stamp them, and lay them twice a day to the sore: and it will either fasten the old hoof, or quickly bring forth a new. Now there be other Farriers, which first fill the sore with Turpentine, and after it hath lain twenty four hours, then wash the sore with Urine and Copperas water, then fill it either with Verdigrease, or with Sheeps tallow, pitch and Rozen boyled together; in which, having dipt hurds, lay it to the sore very hot twice a day till it be whole.

C H A P. CXVII.

Of casting the Hoof.

THe casting of the hoof, is, when the whole coffin thereof falleth clean away from the foot; which cometh of all the former causes rehearsed in the last Chapter, and is so apparent to the eye, that it needeth none other signs. Now for the cure, it is thus; take of Turpentine one pound, of Tar half a pint, of unwrought Wax half a pound, of Sheeps suet half a pound, and of Saler oyl half a pint; boyl all these things together, and stir them continually until they be throughly mixt together; then make a boot of Leather, with a strong sole fit for the horses foot, to be laced fast about the pastern; then dress his foot with the Salve afore-said laid upon flax or tow, and bolster and stop his foot with soft flax, so as the boot may grieve him no manner of wayes, renewing it every day once until the new hoof come: then as the hoof beginneth to harden, if it grow either thick, crumpled, or out of order, with a fine Rape file keep it smooth, and plain, until the hoof be perfect, and then put him to grais, that there it may take a kindly hardning and toughness.

C H A P. CXVIII.

Of the Hoof-bound.

THe Hoof-bound is nothing else but a shrinking in of the whole hoof in the upper part thereof, and at the heels, making the skin to stare above the hoof, and to grow over the same. It proceedeth from keeping the Horses hoofs too dry in the stable, or from straight shoeing, or from some unnatural heat after foundring; and the signs of the disease are, that the Horse will halt much, and his hoofs will be hot; and if you knock upon them with an Hammer, they will sound hollow like an empty bottle; and if both his feet be not hoof-bound, then the sore foot will ever be the lesser: and you shall also understand, that this disease of some Farriers is called a dry foundring. Now for the cure thereof, according to the opinion of the ancient Farriers, it is thus: Take a pound of the sward of Bacon, and a quarter of a pound of white Sope, and a handful of Bahin, and a handful of Bay leaves, and four or five branches of Rue, and stamp them well together; and then fry them, and lay them about the cronet of the hoof very hot, suffering it so to abide the space of five or six dayes, and then renew it, but in no case let him tread in any wet place, and this will help him.

Others of the ancient Farriers use, first to pull off his shoes, and to shooe him with half moon shoes, called Lunets, or Lunet, the shape whereof you shall see in another place; then rase both the quarters of the hoof with a drawing knife, from the cronet unto the sole of the foot, so deep that you may see the dew come forth: and if you make two Rasers on each side, it shall be so much the better, and inlarge the hoof the more; that done, anoint all the hoof above, next unto the cronet, round about, with the oyntment described before in the last Chapter of casting the hoof, continuing so to do every day once until he begin to amend; and let him be ridden upon some soft ground an hour or two every day once for the space of a moneth; and if he go not well at the moneths end, then take off the halt shoes, and pare all the soles, frushes and all so thin, that you may see the dew come forth, and tack on a whole shooe,
and

and stop all the foot within with Hogs grease and bran molten together, and laid very hot to the foot, renewing it every day once the space of nine dayes, to the intent the sole may rise; but if this will do no good, then take away the sole clean, and clap on a whole shooe, and stop the foot with Nettles and Salt brayed together; yet stop it not too hard, to the intent the sole may have liberty to rise; and let this be renewed every day once till the sole be grown again; and let him be shod with Lunets, and so sent to graze. Other Farriers use only to raze the hoof from the Cronet to the verge of the hoof in four or five places, and rub it twice or thrice a day with Salt, and that will open the hoof. Others use only to open the horse exceeding much at the heels once a week, and to shooe him with very wide open shooes, and then for a month or two to draw him in some Cart, that, being forced to set his foot hard to the ground, he may thereby stretch forth and widen his hoof. Now to prevent this Sorrance, it is good to anoint his hoofs with Neats-foot Oyl, or Turpentine, and to stop them underneath with Cowsdung.

C H A P. CXIX.

Of the running, or rotten Frush.

THe Frush, which of some is called the Frog of the foot, is the tenderest part of the hoof toward the heel, and is fashioned like a forked Arrow head, being only that part of the foot which Farriers cut forth, when they say they cut forth the sole of the horses foot. Now in this Frush breedeth many times a rottenness or corruption proceeding of humours, which come out of the Legs, by which the Leg is kept clean from Wind-galls, and all other tumours or swellings, by means that the humours have passage that way: notwithstanding the mischief of this Sorrance is greater than the benefit, because it maketh the Horses foot so weak and tender, that he is not able to tread upon any hard ground. The signs of the Sorrance are, the Horse will halt much when he travelleth either upon loose stony ground, or upon stiff dirty wayes, and goeth ever best upon green swarth; but above all, he halteth most when the passage of the humour is stopped with any gravel gathered into the Frush,

Frush, and not being stayed or stopped, it will continually run, and stink so extremely, that a man can hardly endure the scent of it; besides in some places it will look raw.

Now the Cure, according to the opinion of the antient Farriers, is thus; First, take off the shooe, and pare away all the corrupt places, and make them raw, so as you may see the Water issue out of the raw places; then tack on the shooe again, being first made wide and large enough; that done, take of Soot one handfull, of Salt as much; bruisse them well together in a dish, and put thereto the Whites of three Eggs, and temper them all together; and with a little Tow dipped therein stop all the foot, and especially the Frush, and splent it in so as it may not fall out, renewing it once a day the space of seven dayes, and certainly it will cure him. Now during the cure, the Horse must rest, and come in no wet; and at the seven dayes end leave stopping him, and ride him abroad, and alwayes when he cometh in, let his sore foot be clean washed; for there is no greater enemy unto the Sorrance than gravel and dirt. Other of our latter Farriers only take off the shooe, and pare him well, and keep the sore clean both from dirt and his own dung, by washing it three or four times a day with Urine, and that only will cure him as well as any medicine.

C H A P. CXX.

An approved and certain Cure for the running and rotten Frush.

AFTER the foot is cleansed, take a quart of old Urine, and boyl it with a quarter of a pound of Allome beaten to powder, and keep it in a close vessel by it self; then take a good handfull or two of green Nettles strong and Keen, and spread them on some Plate or other Vessel, and dry them either before the fire, or in an Oven after household bread is drawn, then crush and bruisse them into a very fine powder; then look what quantity of powder there is, and take the like quantity of Pepper beaten to as fine powder, and mix them both very well together, then keep this powder in a close Gally-pot or Bladder.

Now, when you have occasion to use it, first wash the sore place with the Urine and Allome made very warm, and the sores thoroughly scoured,

scoured, after dry them well by drawing through them a fine Rag of Lawn, Cambrick, or fine old Linnen, and strow or pounce of the powder upon them, so much as may cover all the sores, and thus do ever after travel, as once a day in the time of rest.

C H A P. CXXI.

Of Evil Hoofs.

Horses partly through a natural inclination, partly through the stoniness of the Soil wherein they are bred, and partly through mischance or ill government, will have ill-favoured and naughty hoofs, as either wrinkled or crumpled, or else mowlded awry, or such like; all which needs no signs, because of the apparent sign thereof: Then to amend them, the best cure is, with a fine Rape file to smooth the wrinkles away, and to anoint the coronet of the hoof with a fat sward of Bacon rubbed in foot; then let the Horse stand for at least a fortnight upon his own dung, whereon you shall cast good store of water, only remove away the dung every night; and then presently after the change of the Moon, shoe the Horse with strong shoes, keeping the sole of the foot by paring, so hollow as you can possible, and it will shape his hoof to your pleasure.

C H A P. CXXII.

Of Brittle Hoofs.

If a Horse either through the heat of his own nature, or in that he hath been either heated on his feet by labour, or foundred, and evil cured, shall happen to have his Hoofs so brittle and short, that they will hardly bear a shoe: The signs whereof are, the hoof will be white and crumbling: Then the best cure, according to the opinion of the best Farriers, is, to take Ox dung and Vinegar, and mixing them very well together, warm them on the fire, and so bind it both under and above round about the Horses foot, and then lace on his boot of strong Leather, as is afore-said in the Chapter of casting of the hoof. Other Farriers use to let the Horse stand upon his own

dung, and anoint all the upper part of his hoof with the fat of Bacon sod and mixt with Turpentine: And this you must do every day once till you see his hoofs come to some toughness.

Others use to take Turpentine, Hogs grease, and Honey, of each alike; melt them well together, and being warm anoint all the hoof therewith: then dip tow therein, and fold it all about the Horses foot both under and above; and then put on his boot; dress him once a day, and once in two dayes let him stand four hours without his boot, that his hoof may grow as well hard as tough.

C H A P. CXXIII.

How to preserve Hoofs.

IF you mean to preserve your Horses hoofs, either from any of the former Sorrances, or any other grief whatsoever, you shall, according to the opinion of the ancient Farriers, take three heads of Garlick, a little bundle of Rew, six ounces of Allom beaten into powder, two pound of old grease, and the dung of an Ais; boyl them all very well together, and stop your Horses hoof therewith once a day. Other Farriers take of Vinegar a quartern, of Tar half a pint, of Hogs grease ha'f a pound, of Oyl a pint, and a good handful of Wormwood, and four or five heads of Garlick; boyl all these together to a thick oyntment and therewith anoint all the Horses hoofs. Others use to boyl Beans till they burst, and then temper them with Honey, and therewith anoint all the hoofs: or else wash all the Hoofs with warm Vinegar, and then anoint them with Horc-hound, Worm-wood, and Grease molten together.

Other Farriers take of *Olibanum*, and new Wax, of each one ounce, of Dialthea and Turpentine, of each three ounces, of Butter four ounces, of old Oyl six ounces, and of Sheeps suet and Plantain, of each a pound; boyl them all well together, and therewith anoint the hoofs twice a day. Other Farriers use to anoint his hoofs with Turpentine, Hogs grease, and Honey warmed and molten together, of each a like quantity; then pare the foot well, and shoe him in the new of the Moon two or three dayes after the change.

Others

Others use to take chalk and white lead mingled together, or else Bark dust and honey mixt together, and being heated in a posner, and laid hot on the bare flesh, is most excellent to make any Hoof grow: To conclude, if a Horse stand upon his own dung, (being very well watered) so he do not lye in it, it is most soverain for the preserving of the hoofs.

C H A P. CXXIV.

For any hurt upon the Hoofs,

IF your Horse shall receive any hurt upon his hoofs, either outwardly, or inwardly, as either by any false treading, or crossing one foot upon another, or by any bruise either upon cogle stone, flint, or such like, then for the cure thereof, you shall first stop the hoof with Honey and Vinegar mixt together, for the space of three dayes at the least; and then afterward with the leaves of Tamarisk well bruised and beaten together, until the hoof be sound again.

Other Farriers use only to stop the hoof with Sheeps grease and Horse dung mixt together, renewing it once a day until it be well.

C H A P. CXXV.

How to soften Hoofs.

THe Hoofs of Horses will by long and dry standing upon dry plaunchers, grow so hard, that they will not be pared, nor cut by any Butterife: Besides, they will so take from the Horse the sense and feeling of his feet, that the Horse will go very stiff and unlimbly: Wherefore, when you shall perceive any such defect, which is best known by offering to pare the hoof, then presently you shall take an ounce of Sope, two ounces of unsleckt Lime, with as much strong lye as will make it soft like a Lenwick salve, then with that stop the Horses feet daily till they come to a convenient softness, Hot glowing embers put upon the hoof will soften it.

C H A P. CXXVI.

How to harden Hoofs.

AS dry standing, and dry keeping doth harden the hoofs too much, so wet and moist keeping, as continual going in Marshy grounds, or continual standing either upon dirt, or the Horses own dung, or too hot stoppings will make a Horses hoofs too soft; in so much that the Horse through the tenderness thereof, will neither be able to go, nor bear any shooe, which you shall perceive by the soft and easie cutting of the hoof. The manner then to harden and cure them, is, according to the opinion of the ancient Farriers, first to burn an old shooe sole, then seeth it well in Vinegar, and therewith bathe the Horses hoofs at the least twice a day, and it will harden them.

Other skilful Farriers use to take of the powder of Galls, of Bran, and of Salt, of each a handful; boyl these well in a pottle of strong Vinegar, and therewith bathe the hoofs, and in a short space it will harden them.

C H A P. CXXVII.

Of the Malt-long of the Hoof.

THe Malt-long, or as some Farriers call it, the Malt-worm, is a cankerous Sorrhance above the Hoof, just upon the Cronet, which will break out into knobs and branches, and out of the same will run a watrish sharp lye or humour, which will venom the whole foot; as for the signs, they are the apparent sight of the Sorrhance, and the continual running out of the thin water. Now the Cure, according to the opinion of the ancient Farriers, is, if it be in the Summer time, to take black Snails, and Bur-Roots, and beating them well together, lay them unto the sore, and renew them once in 24. hours. But if it be in the Winter, then take the scrapings of a Pans bottom, or of a Cauldron, and put thereto a handful of the inner green bark or pills of the Elder-tree; and having beaten them well together in a mortar, lay it unto the sore, and renew it once a day

day, and it will heal it. Others use to take Garlick, Pepper, and Honey, of each a like quantity, stamp them very well together, then anoint his tongue with a little thereof, and then lay some to his pasterns, and that will cure the Sorrhance.

C H A P. CXXVIII.

How to skin any sore foot.

THere is nothing better to skin any sore foot of what accident or Sorrhance soever it proceed, than to take Turpentine simply of it self, and therewith every day to anoint the sore foot, and it will not only gather skin but hoof also, if it be in a place where any such need requireth. Also white Lead, and Train oyl beaten together, will do the like.

C H A P. CXXIX.

Of goured or swol'n Legs.

THe gource, or goured Legs, is an ill sorrhance, being a grievous swelling in the nether part of the Legs, proceeding either from the melting of the grease by immoderate labour, and then wanting wherewith to avoyd that grease out in excrements, it falleth down into the limbs, and there breedeth this swelling; or else when a horse is exceedingly heated, and then without care set up, and taketh cold, in so much that the blood falleth down into his Legs and there congealeth, and maketh his Legs to swell. To conclude, they do sometimes proceed from hard beating in hard wayes in the Summer time, which first raiseth up wind-galls, and then those wind-galls offending the sinews, maketh them to swell, and this is the worst gourding, because ever for the most part lameness doth follow it.

The signs are, the Horses Legs will ever be most swoln when he standeth still in the house, and least when he is in travel, especially if he travel in much water: and the swelling most commonly is accompanied with some small scabs, and in the end it will break out into the scratches. The cure, according to the opinion of the ancient Farriers, is, to draw him with a hot Iron a handful above the knee, and

and then rope his Legs with a soft rope of hay wet in cold Water, and let it so remain a day and a night, and it will take away all the swelling. Other Farriers take two pound of Nerve oyl, two pound of black Sope, a pound of Boars greafe, and melt and boyl all these well together: then strain it, and so let it cool; then when you have any need, anoint and chafe your Horses Legs therewith, and to make it sink in the better, anoint him first with Nerve oyl, and hold a hot Iron against his Legs to make it melt, then use the other oymment in the same manner, which done, keep his Legs clean from dust by lapping a linnen rowler about them.

Others of our latter Farriers use to take up the veins beneath the knee, and let him bleed well: then knit the vein both above and below, and then anoint his Legs with this oymment: Take of Frankincense, Rozen, and fresh greafe, of each a like quantity, and having boyled them well together, then strain it, and use it once a day as you shall have occasion, and it will heal any Gourge whatsoever; only for the taking up of the veins, you may if you will forbear it, sith, if it be not done with great cunning, it will make the Horse stiff ever after. See further in the new Additions, for any strain in general noted thus.

C H A P. CXXX.

A most certain and approved Cure for any Surded or sweld Legs, by what accident soever.

First with a Fleam prick the sweld parts, then take a pint of Wine lees, an ounce of Comin-seeds, and a handful or more of Wheat-flower, and boyl them till they be thick, then apply this pultus very hot to the sweld part, and renew it but once in 24. hours, and if this in two or three dayes draw it to an head, then launce it, and heal it either with a Plaister of Shoo-makers Wax, or else with the yolk of an Egg, Wheat-flower and Honey beaten together to a Salve.

But if it do not draw to any head, and yet the swelling continue, then take of Pitch a quarter of a pound, and as much Virgins wax, of Rozen half a pound, of the juyce of Hyssop half an ounce, of Galbanum half an ounce, of Myrrh secondary half a pound, of *Bdelium Arabicum*

Arabicum half an ounce, of Deers fuet half a pound, of *Populion* half an ounce, of the drops of Storax half an ounce, boyl all these together in an Earthen pot, and after it is cooled, take of Bitumen half a pound, of Armoniack an ounce and a half, and of Costus as much, beat these into fine powder, and then incorporate them with the other, and boyl them all over again: which done, pour the whole mixture into cold Water, and then rowl it into several roles, plaister-wise; after spread this plaister upon sheeps Leather, and fold it about the sweld member, and this will both assuage it, and give much strength to the sinews. You shall by no means remove this plaister so long as it will stick on.

This plaister is wonderful soverain, and of singular use, for the Horse that is continually kept therewith, I mean, that hath if applied to his Limbs ever when he commeth from travel, he shall never be troubled with sweld Legs, nor yet ever put out Wind-gall.

Now, if you will neither go to this cost, nor endure this trouble, yet would have your Horse cured of this infirmity, then know, there is not any thing better, or more approved, than continually both before and after Travel, and in the House many times in the day, to lave and wash your Horses Legs, or other sweld parts, with the coldest and clearest fountain Water that you can get, and sometimes let the Horse stand in some cold running stream the space of a quarter of an hour or more, up to the Knees and Cambrels, but in any case no farther:

This Medicine how poor soever it look, is of much vertue, and though I write of cold Water, yet is the operation hot and fiery: Only this you must take to your Remembrance, that this application appertains not to impostumations, but unto strains, and swellings, and bruises, which are without much anguish.

C H A P. CXXXI.

Of the Farcy, or Fashions.

THe Farcy, (of our ignorant Smiths called the Fashions) is of all outward Sorrances the vilest, the most poysonous, infectious, and the most dangerous, (being any whit neglected) or otherwise the most easie, and with the least cost or trouble to be helped. It is a kind of creeping Ulcer, growing in knots, ever following alongst some one vein or other, and sometimes alongst divers or sundry Veins, according to the strength of the infection. It proceedeth sometimes from corrupt blood ingendred in the body, sometimes from outward wounds or hurts received by cankerous or poysonous instruments, as rusty Spurs, rusty Forks, biting of Dogs or Horses, biting of Ticks, Hogs-lice, or such like; sometimes by the rubbing of Swine against the Legs of the Horse, or by lying in the litter where Swine have lain, or by enter-fearing, or hewing one Leg upon another; but generally it proceedeth from an evil habit of the body, being surfeited by disorderly and unruly Travel, whereby the blood being heated, the greafe melted, and sudden cold taken, there groweth such obstructions in the blood, and such putrifaction in the body, that it can no way evacuate or avoid, but by these small Knots, Pustules, or U'cers, which are so infectious, that as many Horses as do gnaw or gnaw upon the Horse infected, will within one moneth have the same disease: or if the Horse infected, do bite any other, he will infect him also; and this infection without present Cure is mortal, and will kill any Horse: therefore, whensoever you have any Horse troubled with this Sorrance, see that you separate him from other Horses to prevent the danger.

Now for the signs, they are the appearance and palpable feeling of the Knots, which knots are never but accompanied with great swellings and rancklings, running along as the veins run, and dividing themselves as the branches of the vein divide, the number of the knots multiplying and increasing until the body be universally covered over, or else that the member (if it be in a member) be utterly deformed and mis-shapen.

Now

Now the cure, (according to the opinion of the ancient Farriers) is, first let him bleed on the neck vein, and on both his spur veins, then give the Horse this drink: Take a gallon of water, and put into it a good handful of Rue, and a pound of Hemp-seed, both being first bruised in a mortar, then boyl them in water till the one half be consumed, and give the Horse this to drink in the morning fasting being cold, for divers mornings together, and it will cure him.

Others of the ancient Farriers use first to let the Horse bleed in that vein where the Sorrhance first riseth, as nigh the sore place as may be, and let him bleed well: then fire or cauterize every Knot one by one, taking the knot in your left hand, and pulling it so hard as you can from his body, to the intent you may the better pierce the knot with the round blunt hot Iron, of the bignesse of a mans forefinger, without doing the body any hurt, and let the matter out, leaying none unburned being little or much: That done, anoint every knot so burned with Hogs grease warmed every day once until the cores be ready to fall; and in the mean time, prepare a good quantity of old Urine, and when you see the cores ready to fall, then boyl the Urine, and put therein a little Copperas and Salt and a few strong Nettles, and with that water being warm wash out all the cores, and all the corruption: that done, fill every hole immediately with the powder of unsleckt Lime, continuing thus to do every day once until the holes be closed up; and if any be more ranke than others, fill those with Verdigrease; and during this cure, let the Horse be thinly dyeted, that is to say, with straw and water only, unless it be now and then to give him a loaf of bread, or a little other Provender: for the lower he is kept in flesh, the sooner he will heal; and in any wise let his neck either be yoaked in an old bottomless pail, or else splented with staves in such sort, that he may not come to lick any of his sores, and the less rest he hath, the better will be his amendment. Now there be other latter Farriers, which for the Sorrhance take a good quantity of Mistletoe, Honey and black Sope, and boyl them very well in old Urine, and being very warm, wash your Horse all over therewith, every day once for the space of five or six dayes, and it will help it. Others use to cut the Horse two inches long down the fore-head, and open it in the midst thereof on both sides two inches, and put thereto a rampin made of the inner rind of Elder bark which is green, and

look that it lye cross the cut ; for so it will destroy all the venemous humour in his body, and it will heal him very perfectly, having been very oft approved. Others use to take a very sharp bodkin, and to thrust it cross-wise through the nether part of the Horses nose, even through the small gristle, so that he may bleed well ; or else to let him bleed in the neck-vein, then feel the knots, and as many as are soft, Launce them, and let them run, then take strong lye, Lime, and Allom, and mixing them well together, bathe all the sore therewith, and it will cure him.

Others take a sharp lance Knife, and in the top of the Horses forehead somewhat above his eyes, make a long slit even unto his skul ; then with a blunt instrument for that purpose, loose the flesh from the scalp a good compass, then take carrot roots cut into little thin round pieces, and put them between the skin and the skul, or, for want of carrot roots, you may take red Dock roots, and see that they be a little beaten or bruised before you put them in, and once a day see that you thrust out the matter, but by no means thrust out the roots : but if the roots do not stay in, then with a needle and silk stitch the wound together that it may hold in the Medicine ; then once a day anoint the wound with fresh Butter : This is held a very certain cure for the Farcy, for look how this wound made thus shall rot, wast, and grow sound, so shall the Sorrhance break, dry up, and be healed ; only the fault of this cure, is, that it will be somewhat long in healing, and is a foul eye-sore until it be whole.

Now there be other Farriers, which, after the putting in of roots, as is afore said, use to burn all the sore place round about with a hot Iron ; and then with another blunt hot Iron as big as a mans finger, to burn the sores in the midst till the white matter come forth, then with a pair of pinsons pluck out the knots : this done, anoint all the sore places with Sope, and then dress him no more the space of four or five dayes, in which time you must prepare a good quantity of strong piss, with the which you must wash him every day, the piss being first made scalding hot, and rub the sores well until they begin to bleed ; then having dried all the sore places, throw on the powder of unsleckt Lime, or of burnt Allom, which will heal better than Lime. Now if you see that in any of the sores through negligent dressing there riseth proud flesh so high, that you cannot correct

it sufficiently with the aforesaid powder, then you may burn any such place so sore or sorer as you did at the first, and dress it as before. Now there be other Farriers, which, when they see the Farcy to have been old and long gone, and that it is so far entred into one Member or other, that the member is disfigured, they will then first purge the Horse with some strong purgation, of which you may find choice in a Chapter before written, and then under his belly, put in one rowel either of hair or Leather; or on the pitch of his shoulder of his grieved Leg (if it be before) or else on the st-fling place, if his grief be behind, put in another Rowel, and so keep those two places, together with the issue in his fore-head open, until the cure be finished; then with another hot Iron burn all his Leg down with long strikes, even from the body to the hoof, not above an inch one strike from another, the edge of the Iron being not above a straws breadth, and draw your stroak ever downward with the hair, and burn him no deeper than that the skin may look brown. Now, when by this practice you have cured the disease, if then the Member be unfashionable, or by swellings out of all form, then you shall lay unto the member a plaister made of Wine lees, and Wheat-flower, and Rowl it with a wollen Rowler, renewing it once in twenty four hours, till the member be asswaged, and this practice will heal any great swell'd Leg, if it be applied and continued with patience; but if by former dressings, burnings, manglings or cuttings of some ignorant Farriers, there be any extraordinary, hard, or horny substance grown about the member, which the plaister afore-said will not resolve, then you shall take of Virgins Wax half a pound, of Mirrh one pound, of raisins a pound, of *Galbanum* half a pound, of Costus six ounces, of Armoniack six ounces, of Swines grease two pound; put your Swines grease first into an earthen pot, and having placed it in a broad cauldron full of water, then make a soft fire under it, to the end that your water may boyl; and when you do perceive your Swines grease is almost melted, then shall you put in all the other simples, except the Costus, and when they are all molten, which will ask five or six hours boyling at the least, then your Costus, which is a white root, being beaten into fine powder, you shall add to, the afore-said things after it is taken from the fire, and incorporate them all very well together, then make a plaister thereof upon a piece of Sheeps leather, somewhat bigger than the sore,

and this Plaister without renewing will serve for at the least thirty dayes, with a very little refreshing, only you must once a day take it off, and rub his Leg very well for fear it itch, which may cause the Horse to beat and stamp with his foot, and so rather increase than decrease the swelling; and you must regard, that you do not Row him too strait, for that is most hurtful. It shall not be amiss now and then to ride him into the water, and walk him an hour after, then bringing him into the Stable, rub his Leg well; then warm his Plaister over a Chafing-dish and coals, and so lay it to again: and this practice in two or three moneths will take away any deformity of swelling, be the Member never so uncomly.

Now there be other Farriers, which for this Farcy, if it be but young, and especially if it be about the head or face of a Horse; will take only of *Aquavita* two spoonfulls, of the juyce of Garlick two spoonfulls, and of the juyce of Rew, or herb of Grace, two spoonfulls; mix them well together, then take plegants or round balls of flax, and steep them therein, and then stop them hard into the horses ears; then take a needle and thred and stich the tips of his two ears together, by means whereof he cannot shake out the Medicine, and use the Horse thus three several mornings together, and it will kill the Farcy, as hath been oft proved.

 Other Farriers use to take Drag-worts, or Ground-sel, and beat it well in a mortar with white Salt, and then stop it hard into the Horses ears, and so either stich them together, or with a broad inckle bind them up, renewing it once in fourteen hours for three or four dressings, and it will heal any reasonable Farcy.

Others use to anoint all the sores either with Tansey, and Verjuyce boyled together, or else with Boars greafe very hot, and that will kill it. Others use first to wash the sores with old Urine, then take the powder of Glasse, Brimstone and Hogs greafe well stamped and beaten together, then opening, or slitting the knots, anoint them all therewith, and it will cure them immediatly. Other Farriers use to let the Horse bleed, if it be at the beginning of the disease, or else not; and then to burn all the knots as is aforesaid, and then to heal the burnings with Tar, Oyl and Honey mixt together, and give him with a pint of Malmsey, two or three spoonful of the powder
Dia pente:

Diapente: or else give him four ounces of the powder of Wall-wort, or Dan-wort, with a pint and a half of Malmsey three dayes together: after that take an ounce of Aloes, one ounce of Centuary, one ounce of Opoponax, beat them all into fine powder, and give them him to drink in a pint and half of Malmsey warmed, wherein the roots of the afore-said herb called Wall-wort, or Dan-wort, have been sodden: use to Ride him oft until he sweat, and when the Disease is killed, turn him to grafs: for running in the open air is very wholesome.

There be others, which take black Sope, Arsnick, unsteekt Lime, Verdigrease, and Red Lead, work all these well together, and opening the Knots, dress them therewith till you see them begin to dry up and dye. Others open the knots with a hot Iron, and then take black Sope, and great Bay Salt beaten together, and half so much as of them, of Verdigrease, and boyl the Verdigrease with fresh grease, and then take a saucerful of Mustard, and put them all together, and dress the sores therewith.

There be others that take three ounces of Quick-silver, and put it into a bladder, with two spoonful of the juyce of Oranges or Lemons, and shake them together to cool the Quick-silver: then take half a pound of fresh Hogs grease, and of Verdigrease an ounce; put all these in a trend dish, and work them well together: then anoint the knots with this Oyntment till they rot: then let them out with a sharp Knife, and anoint them still, and put into his ears the juyce of Rag weed, and the sores will dry up. This Medicine is very well approved. Others take black Sope, Mustard made of Wine Vinegar, and red Lead; mix all these together, and anoint the vein all along, holding a hot Iron close to the sore, to make the Oyntment strike in, and do thus once a day until the sores dry up. Other Farriers take of the juyce of hemlock a good quantity, and dipping tow therein, stop his ears therewith, then open all the knots and thrust in Salt. Lastly, give him to drink sweet wort mixt with Pannel and Treacle. Other Farriers take the butter Bur, and being dried and beaten to powder, strew it upon the knots after they have been opened, and then give him two or three spoonful of the same powder with a pint of Malmsey to drink, and it will cure the Farcy; and it is also exceeding good for all manner of Ulcers; the root is strong in smell, and bitter in taste.

Others take Sulphur, Orpiment, unsleckt Lime, and mixing them together, put it into the Knots, and it will kill the Farcy: which done, anoint him with Bole-armony made into powder, and incorporated with strong Vinegar, the juyce of Houfleeke, and of white Leeks, and Solatro. Other Farriers after they have let the Horse blood, will boyl in Vinegar, Bean-flower and Swines grease, then add a pretty quantity of oyl, and then strain it, then add one part of Aloes, and two of Brimstone, and boyl it a little: then being warm, anoint all the sore places therewith, or else anoint them twice a day with the juyce of Smallage, and the yolks of Eggs beaten together.

There be other Farriers which take two ounces of Oyl de bays, one of *Euforbium*, and two ounces of Arsnick, and mixing them together, anoint the sores therewith, and it will kill the Farcy. Now after all these many Receipts, of which not any but hath been approved to be very good, yet these two which I will now rehearse, I have ever found to be the most excellent for any manner of Farcy whatsoever, whether it be, as our simple Smiths term it, a dry Farcy, a wet or watry Farcy, or a running Farcy, all being indeed but one Farcy, and proceeding from one cause; only some Horses not having such flux of humours in them as others have, the Knots will be unwilling to break, and then they say it is a dry Farcy: others of the contrary part will break as fast as the Knots arise, and run filthy matter, and then they call it a watery Farcy: Others will spread in many parts of the body, yet not break, but as it were move betwixt the skin and the flesh, but that they call a running Farcy.

Now all these are but one Farcy, and have but one certain Cure, which is this. First, with diligent heed mark upon what principal vein of the Horses body the Knots do arise, and note how they spread and run, then if the Farcy be divided into sundry branches, according as the vein doth divide, you shall take the last knot of every branch, which for the most part will be hard, and not come to rottenness; and then slit them, and fill them with your Knives point full of white Mercury: then those which you find to be rotten, let the matter forth, and anoint them with black Sope and Mercury mixt together: then within a day or two you shall see those which you dress with Mercury simple, to have their cores fall out; and the

the rest which you dress with black Sope, will dry up: then anoint them all with fresh Butter molten till they be whole. Now if you perceive any new knots to arise, then you shall dress them like-wise with Mercury simple, as was said before, and not leave any uncured. Now if the Farcy be not very contagious, but as it were newly begun, then if you only take black Sope and Mercury, as before said, and anointing your finger and your thumb therewith, do but nip and bruise every knot, and within two or three dayes after they will dry up and heal. But if the Farcy be foul and desperate, that is to say, either universally spread over the body, or so gotten into any Limb or Member, that the Limb is deformed, and hath lost his proportion, so that a man can neither judge which way the veins run, nor in what part the knots are most venemous, because that healing one, two new ones will arise;

In this same case, you shall first give your Horse a strong scouring or purgation, according to the strength of his body, of all which, a pint of Muscadine, or a quart of strong Ale, with half a pint of the oyl of Oats, is the most soverain: then shall you take a penny-worth of Tar, and two good handfuls of Pigeons dung, and twelve penny-worth of white Mercury; mix all these very well together, and make them into a salve: then with a fliee daub it all over the sore place, leaving no part of the Member uncovered; then heating a bar of Iron Red hot, hold it so near that it may dry the Salve upon the sore: then lay more fresh salve on, and dry in like manner, and so let it rest until it fall off, and it will kill any Farcy whatsoever, at the first or second dressing. There be others which will stop the Knots with the powder of Verdigrease and of Arsnick mixt together, or else wash the sores with *Aqua fortis*, but they are neither so good as the other before rehearsed.

CHAP. CXXXII.

Of the Canker in any part of the body.

A Canker is a poysonous creeping Ulcer, fretting and gnawing the flesh a great breadth, whose beginning is knotty, not much unlike to the Farcy, and spreadeth it self into divers places; and being exulcerated, gathereth together at the length into one Wound.

Wound or filthy sore, from whence there runneth a thin sharp lye, which galleth off the skin wheresoever it goes, and so both increaseth the Ulcer, and maketh it more incurable. It proceedeth from Melancholy and filthy blood, ingendred either by rankness of keeping, or else by too extreme poverty; and if this naughty blood be mixt with sharp and Salt humours, then it causeth more painful and grievous exulceration. It also may proceed from some loathsome Wound, which is neither clean kept nor well drest, but in such sort, that the corrupt matter thereof poysoneth the other clean parts of the body. For signs of the Sorrance, there needeth no more but the description already mentioned. And for the cure, according to the opinion of the ancient Farriers, it is, first to let the Horse bleed in those veins which are next the sore, and make him bleed well; then take of Allom half a pound, of green Copperas as much, of white Copperas one quarter, and a good handful of Salt, boyl all these things together in fair running water, from a pottle to a quart: and this water being warm, wash the sore therewith with a clout, and then sprinkle thereon the powder of unsleckt Lime, continuing so to do every day once the space of fifteen dayes; and if you see that the Lime do not mortifie the rank flesh, and keep it from spreading any further, then take of Sope half a pound, of Quick-silver half an ounce, and beat them together in a pot until the Quick-silver be so well mingled with the Sope, as you can percieve no Quick-silver in it; and with an Iron slice or splatter, after that you have washed the sore with the strong Water afore-said, cover the Wound with this oymtment, continuing thus to do every day once until the Canker leave spreading abroad. And if it leave spreading, and that you see the rank flesh is well mortified, and that the edges begin to gather a skin, then after the washing drest it with Lime, as before, continuing so to do until it be whole; and in the dressing, suffer no filth that comes out of the sore to remain upon any whole place about, but wipe it clean away, or else wash it away with warm water: and let the Horse during this cure, be as thinly dyeted as may be, and thoroughly exercised. Now if this cankerous Ulcer happen to be in the tail of a Horse, as it is often seen, and which you shall percieve as well by the falling away of the hairs, as also by the wound, then you shall make a bolster of soft cleath or sponges, and wet it with Vinegar both within and without, and so bind it fast

to the fore; and alwayes when it waxes dry, you must wet it again; do thus twice or thrice a day, if it be done oftner it is better: so shall you continue for three or four dayes, and then heal it up as you heal an ordinary wound; that is, with Hogs grease and Turpentine molten together, or such like. There be other Farriers, which for the Canker on the body, do take an ounce of the juyce of the root of Affedely, three ounces of unsleckt Lime, two ounces of Orpiment, or Arsnick, put this in an earthen Vessel close stoppt, and either boyl or bake it in an oven till it come to a powder; then first wash the fore with strong Vinegar, and after strew this powder thereon. Others use to take Garlick, and beat it in a mortar with Swines grease till it come to a Salve, and then having washt the fore either with Vinegar, Allom water, Copperas water, or old Urine, anoint it once or twice a day with it till it be whole. Other Farriers take the herb Mullen, and bruise it, and mix it with Salt and Verdigrease, and dress the fore therewith morning and evening for the space of three or four dayes, then use the same salve again as long without Verdigrease, then lastly use the herb alone: but if at any time you see it do begin to Wax raw, then begin again as is afore said, and ever before you anoint it, wash it first with Vinegar and grease mixt together. Others take Savin, Bay-salr, and Rew stampt with Barrows grease, and anoint the fore therewith, and when the ill humours are kild, (which you shall know by the whiteness) then heal it with Tar, Oyl, and Honey mixt together.

Lastly, (and which I hold the best) take Vinegar, Ginger, and Allom, and mix them together till they come to a Salve, and with it anoint the fore, and it will both kill the Poyson, and heal the Ulcer.

C H A P. CXXXIII.

Of the Fistula.

A Fistula is a deep, hollow, crooked, mattering Ulcer, and for the most part, commonly a great deal straighter at the mouth than at the bottom, being ingendred in some wound, bruise, sore, or Canker, not throughly healed. The signs to know it are, the hollownes of the sore descending downward from the Orifice, and the thinness

thinness of the matter which issueth from the same; besides, the crookedness which you shall find in the Ulcer, when you search it.

☞ Now for the cure, according to the opinion of the ancient Farriers, it is thus: First search the bottom thereof with a Goose or Swans quill, or with a small Rod well covered with a fine Linnen cloath; and having found the bottom thereof, cut it so large with a Razor, that the matter may have free passage downwards; but take heed in launcing it, that you cut not any master sinew, or main tendon: then having stanch'd the blood either with Swines dung, or such like, take of good Honey a pint, of Verdigrease one ounce, and boyl them well together upon a soft fire three quarters of an hour; then having cleansed the sore by tying a tent of flax or fine Linnen cloath to the point of your quill, with a thread draw it softly into the Wound: then cut off your quill or feather so long that you may take good hold in the nether end of the tent, which then shall come out at the bottom of your sore: then dip another tent in the aforesaid Salve, and then with a needle and thred make fast your tent to your first clout, at the upper end thereof; then draw out your first tent downward, so shall you draw your tent with the Medicine easily into the Wound, and your first tent will have cleansed the sore very clean; and if the matter do abound much, then it shall be good to dress him twice a day: but you must not dress him with this Medicine no more but one day, and afterward you shall dress him with this Medicine following: take of Turpentine, of Swines grease, of Honey, and Sheeps suet, of each a like quantity, and melt them together, and make a salve thereof, wherewith you shall dress your sore four dayes, for one day that you dress him with the former Medicine made of Honey and Verdigrease; and take heed that you make your tent of very soft Linnen cloath, and fine flax: and let not your tent be too big after the first and second time dressing, but presently after the first dressing you must cover the sore place, and round about the same, with this Pultus here following.

First, take two Gallons of fair Water, and having boiled and scum'd it so long till you have perfectly cleansed it of all corruption, then take two or three handfuls of Mallows, and as much of Violet leaves, and two or three of Oat-meal, and having boyled all these
three

three things well in your former prepared Water, you shall add thereto of Hogs-wort, and fresh Butter, of each a pound: then shall you let it boyl so long till it become thick, like paste or pap, and then apply it hot to the sore, and take heed that in opening this sore you let not any air strike into it: And on the other side, that you keep it not too hot: And if this Fistula be in the Horses Withers, you must take heed that you tye his head to the rack, so as he may neither lye down, nor put his head lower than his manger: for if you suffer him to feed on the ground when he hath any grievous sore in his Withers, it shall hardly be possible ever to cure him; but if you perceive the Wound to heal apace, and that it matter but a little, then shall it be enough to dress him once a day: and also it shall be good, to take great heed, that you make not your tent too big, and see that you use your Pultus till it be perfectly cured. Now there be other of the ancient Farriers, which use for this cure, first to search the depth of the Fistula either with a quill, or with some other instrument of Lead, which may be bow'd every way: for unless you find the bottom of it, it will be very hard to cure; and having found the bottom, if it be in such a place as you may boldly cut and make the way open with a Lancet or Razor, then make a slit right against the bottom, so wide, that you may thrust in your finger to feel whether there be any bone or else gristle perished, or spongy, or loose flesh, which must be gotten out; and then tent it with a tent of flax dipped in this Oyntment: Take of Mirrh, of Aloes, and of Sarcocolla, of each one ounce, of good Honey six ounces, and of Verdigrease two ounces, and melt all these on a gentle fire, and make them into a Salve; then being luke-warm, dress the tent therewith, and bolster the tent with a bolster of flax, and if it be in such a place as the tent cannot conveniently be kept in with a band, then fasten on each side the hole two ends of a shoemaker's hred right over the bolster, to keep in the tent, which ends may hang there as two laces to tye and untie at your pleasure, renewing the tent every day once until the sore leave mattering, and then make the tent every day lesser and lesser until it be whole: for you shall understand, that this Salve doth purge this fistula of putrifaction, incarnateth and breedeth flesh, conglutinateth and eateth away all naughty flesh. Now when you have done as afore-said; then you shall close it up by sprinkling thereon a little unblecked Lime; but if the fistula be

in such a place, as you can neither cut against the bottom, nor tye the same, then there is no remedy, but every time you dress it, to pour into it either through some quill, or by some small squirt or serringe, some strong white Copperas water, or some Allom-water, so that it may go down to the bottom, and dry up the filthy matter: and this you must do twice a day at least until it be whole. Now there be of our latter Farriers, which use this cure, after they have searcht the Fistula to the bottom, to take a pottle of white Wine Vinegar, of Camphire half an ounce, of Mercury precipitate half an ounce, of green Treacle three ounces, of Red Sage an handful, of Yarrow and Rib-wort of each an handful, of Honey half a pint, of Boars greafe half a pint, boyl all these together till a quart be consumed, and with this you shall wash and cleanse the Wound: then to heal up the same, you shall take oyl of Roses, Virgins Wax and Rozen, of each a like a quantity, of Turpentine five ounces, of the gum of Ivy and Deers suet as much, boyl these together unto a Salve, and then dress the sore therewith until it be whole, observing ever, both in this cure, and all the rest, that as soon as you have put in your Tent, to clap a plaister over it of Pitch, Rozen, Mastick, Turpentine and Hogs greafe molten together, which will both comfort the Wound by taking away evil humours, and also keep in the tent from falling out. Now if the Fistula be in or about the head of the Horse, then you shall take the juyce of Houslick, and dip therein a lock of Wool, and put it into the Horses ears, and it will stay the inflammation; but if it be exulcerated and broken, then you shall cut away all the rotten and false flesh, and then bathe it well with the grounds of Ale made warm, and then wipe the blood clean away: then take Butter, Rozen, and Frankincense a little, and boyl them all together, and boyling hot pour it into the wound, and then clap on the plaister; do thus once a day till the Horse be whole. Now if there be any inflammation behind the Horses ears, or that it grow to any impostumation in that place, then you shall boyl the roots of Mallows in water till they wax tender, then bruise them, and strain out the water clean, and being warm, apply it to the sore, and it will heal it.

There be other ancient and skilful Farriers, which for the general Fistula use as a prevention thereof, to take Honey and Sheeps suet, and making it scalding hot, to scald the sore extremely therewith upon

upon the fist swelling, and it will keep the Fistula that it shall not breed; but if it breed, then you shall Launce it in the nethermost part, and put into it as much Mercury *Sublimatum* as a pease, being first abated with Saler oyl, and laid on with a feather; after that take of Verdigrease four penny worth, of Vitriol a half penny-worth, of Red Lead three penny-worth, beat these together, and every day wash the wound with Copperas water, made with Copperas and Elder leaves in Summer, and with the inner green bark in Winter; after the washing take the powder, and put it on the sore, and after it drop on a little Oyl.

Others Farriers take the outermost green shels of Wal-nuts, and put them in a Tub, strowing three or four handfuls of bay salt upon them, some in the bottom, some in the midst, and some on the top, and so keep them all the year; and when you will use them, take a pint of them, a little bay Salt, and half a quarter of a pound of black Sope, with half a spoonful of May Butter, (and for want thereof; other Butter) and mix and incorporate them together; and then spread it on the sore, or tent the sore therewith; but two hours before you lay it on, anoint the place with *Venice Turpentine*, and do thus till the fistula be whole.

Others Farriers take *Unguentum Aegyptiacum*, which is made of Honey, a pint, Vinegar half a pint, Allom a quarter of a pound, and Verdigrease one ounce and a half; and seeth them all together till they be thick, and of a tauny colour; this is called *Aegyptiacum*, and to make it the strongest way, is, to put in of Mercury *Sublimatum* one ounce made into powder, and of Arsnick two scruples, and boyl it together; with either of these, especially the strongest, dress any Fistula, Canker, or foul old Ulcer whatsoever, and it will kill it; and the weaker of these, which wanteth the Mercury and the Arsnick, may be applied to the Fistula in the mouth of a Horse. Other Farriers take of *Sublimatum* made into powder one ounce, the midst of well Leavened bread slack baked three ounces, of Nenin ten drams, mingle them together with a little Rose water, and make tents thereof, and dry them upon a Tile, and at your pleasure rent your fistula therewith, and it will assuredly kill it. Others take strong Lye, Honey, Roch-Allom, and Mercury, and seeth them together, and squirt it into a Fistula, and it will kill it at the bottom, and when you mean to dry up a Fistula, take red Wine, Goats dung,

dung, and Bean-flower, and seeth them together, and apply it to the Fistula, and it will dry it up.

Now if you intend to sink down the swelling of a Fistula, first of all sear it with a drawing Iron in this proportion ✱, and then take Rosin, Sheeps suet, and Brimstone, and boyl them together, and lay it upon a Fistula very hot with a cloath, and it will sink down the swelling. It is also most excellent to take away a Wind-gall, if it be laid on after the Wind-gall is prickd, but not too hot, but very reasonable, and it will keep it also very clean.

☞ There be other Farriers, which for a fistula take Verdigrease, Butter and Salt melted together, and pour it scalding hot into the fore; and use this till all the flesh look red; then tent it with Verdigrease, burnt Allom, Wheat-flower, and the yolks of Eggs well beaten and mingled together: Last of all, skin it with Barm and Soot mixt together.

C H A P. CXXXIV.

A rare and true approved Medicine to cure any Fistula, or hollow impostumation whatsoever.

☞ TAKE a pint of the strongest Vinegar, and being hot upon the fire, mix therewith the lome of a clay Wall, which hath not any Lime in it, but by no means do not pick out the chopt straws or hay that is in the lome, but boyl them all together till it come to a Salve: then being reasonable hot, spread it over all the sweld place, and over every part which you shall feel hard: and you shall thus do twice a day, and it will not only ripen and break the hollow Ulcer, but also search it to the bottom and heal it. This medicine cureth any fore back whatsoever, how grievously soever, either gall'd or bruised.

C H A P. CXXXV.

Of the Ambury.

AN Ambury is a great spongy Wart full of blood, which may grow upon any part of the Horses body, chiefly about the Eye-brows, Nostrils, or privy parts, and it hath a root like unto a Cocks stone. Now the cure, according to the opinion of the ancient Farriers, is, first to tye it about with a thred or hair so hard as you can pull it, and the thred will eat in by little and little, in such sort as within seven or eight dayes it will fall away of it self; and if it be so flat, that you can bind nothing about it, then take it away with a sharp hot Iron, cutting it round about, and so deep as you leave none of the root behind, and then dry it up with the powder of Verdigrease, but if it grow in such a sinewy place as it cannot be conveniently cut away with a hot Iron, then it is good to eat out the core with the powder of Resalger, or Mercury, and then to stop the hole with flax dipt in the white of an Egg, for a day or two: and lastly, to dry it up with the powder of unsleckt Lime, and Honey, as is before taught. Other Farriers, in stead of tying the Wart with a thred, do tye it with some Horse hair: and that is a great deal the better, and will rot it off sooner, and faster.

C H A P. CXXXVI.

Of the Cords.

THe Cords is a certain string, which cometh from the Shackle vein to the Gristle in the Nose, and between the Lip, the length of an Almond; or there be two strings like threads, which lye above the knee, betwixt the knee and the body, and goe like a small cord through the body to the nostrils, making a Horse to stumble much, and sometimes to fall also; and it is a disease very much incident to many young Horses. The signs are, an apparent stiff going, and much stumbling, without any outward or visible Sorrance; the Cure is, according to the opinion of our ancient Farriers,

riers, to take the end of a crooked Harts horn that is sharp, put it under the cords, and twine it ten or twelve times about, till the Horse be constrained to lift vp his foot; then cut the cord asunder, and put a little Salt into the issue, or cut it first at the Knee, than at the end of his Nose, and so draw it upward a span length, and cut that off. Other Farriers let the Horse bleed in the vein that descendeth in the inside of the Leg, by the breast, and take away at least a pottle of blood, and after seven dayes wash him with Beef-broth, and it will heal him.

Other Farriers take Mustard, *Aqua-vita*, and Saler oyl, and boyl them on the coals, and make a plaister, and bind it to the place that is grieved, and it will help.

O. hers take the grounds of Ale, and being made warm, bathe his Legs therewith, and then rope them up with wet hay ropes, and it will make the Horse perfectly sound.

C H A P. CXXXVII.

Of the String halt.

THe string halt, of some called the Mary hinchcho, is a suddain twitching up of the Horses hinder Legs, as if he did tread upon needles, and were not able to indure his feet upon the ground; the signs whereof be an apparent ill-favoured manner of halting, most visible to the eye. And the cure is, to take up the middle vein above the thigh, and underneath the same, then under the said vein there lies a string, which string must be cut away: and then anoint him with Butter and Salt, and he will both do well, and go well.

C H A P. CXXXVIII.

Of a Horse that is Spur-gall'd.

IF a Horse by the indiscretion of an Evil Rider, be Spur-gall'd, which is a disease most plain both to be felt and seen: then the cure is, either to bathe it with Urine and Salt mixt together, or with Water and Salt, or with warm Vinegar, or else

else bind unto the place the crops of leaves of Nettles stamped; and any of these will cure him.

C H A P. CXXXIX.

Of Wounds in general.

Wounds, according to the opinion of all Farriers, is a solution, division, or parting of the whole: for if there be no such solution, or division, then it is rather called a bruise than a Wound; and therefore, Wounds are most commonly made with sharp or piercing Weapons, and bruises with blunt weapons: notwithstanding, if by such blunt weapons any part of the whole be evidently broken, then it is to be called a Wound, as well as the other, and these wounds do proceed from some stroak, prick, or violent accident. Now of Wounds, some be hollow, and some be deep and hollow: Again, some Wounds chance in fleshy parts, and some in bony and sinewy places; and those which chance in the fleshy parts, though they be very deep, yet they be not so dangerous as the others, and therefore I will speak first of the most dangerous. If then a Horse have a wound newly made, either in his head, or in any other place which is full of sinews, bones or gristles, then, according to the opinion of the most ancient Farriers, you shall first wash the Wound well with white Wine warmed, and keep it ever whilst you are in dressing it, covered with cloaths wet in warm white Wine: that done, you shall search the bottom of the wound with a probe or small instrument of Steel made for the purpose, suffering the wound to take as little wind or air as you can possible: then having found the depth, stop the hole close with a clout until your salve be ready: then take of Turpentine, *Mel-rosatum* oyl of Roses, of each a quartern, and a little unwrought Wax, and melt them together, stirring them continually that they may be well mingled together; and if the Wound be a cut, make a handsome rowl or round plegant of soft tow, so long and so big as may fill the bottom of the Wound, which for the most part is not so wide as the mouth of the wound: then make another rowl or plegant somewhat bigger to fill up the rest of the wound, even to the hard mouth, and let both these rowls be anointed with the oyntment afore-said, made luke-warm; only
this

this you must ever observe, that if the wound be long and large, that then it is best, if you can conveniently, to stich the wound together with a fine needle and a Crimson silk: for that will make it heal the sooner, and make the skar less. But if the hurt be like a hole made with some prick, then make a stiff tent either of tow or line, such a one as may reach the bottom, anointed with the afore-said Oyntment, and bolster the same with a little tow: and over both this and the other, or any wound whatsoever, as soon as your reweles, plegants or tents are put in, you shall clap a sticking plaister made of Pitch, Rozen, Mastick, and Turpentine melted together, as hath been before taught, both to keep in your salve, and to comfort the sore. Now if the mouth of the wound be not wide enough, so as the matter may easily run forth, if it be in such a place as you may do it without hurting any sinew, then give it a pretty slit from the mouth downward, that the matter may have the freer passage, and in any wise have an especial regard that the tent may be continually kept in by one means or other, and also that it may not be drowned within the wound, but by tying some thread about the upper end thereof, so kept, that it may betoken out at pleasure. Now if the hole be deep, and in such a place as you may not cut it, then make your tent full as big as the hole, of a dry sponge that was never wet, so long that it may reach the bottom; and the tent being made somewhat full, with continual turning and wrying of it, you shall easily get it down, and then dress the wound with this twice a day, cleansing the Wound every time with a little white-wine luke-warm: for the sponge anointed with the Oyntment afore-said, will both draw and suck up all the filthy matter, and make it so fair within as is possible; and as it beginneth to heal, so make your tent every day lesser and lesser, until it be ready to close up, and never leave renting it so long as it will receive a tent, be it never so short: for hasty healing of Wounds breedeth Fistulaes, which properly be old sores; and therefore must be healed like Fistulaes. Now if the wound proceed from any ancient impostumation, then you shall take two or three great Onions, and taking out the cores, put therein a little Bay Salt, and a little whole Saffron, and so roast them in the hot Embers: then plaister-wise lay them all hot on the wound, renewing it once a day till the wound be healed. Now if the upper skin of the wound be putrified, and you would have it away, then make

make a plaister of Cows dung sod in milk, and clap it to for four and twenty hours, and it will leave nothing vile about the wound. Others use generally for any cure whatsoever, to take a quarter of a pound of Butter, of Tar and black Sope, of each half as much, and a little Turpentine; boyl all but the Sope together, then when you take it off the fire, put in the Sope, and with this oyntment dress any cut, and it will heal it.

Other Farriers use only to take Hogs grease and Venice Turpentine, and to melt them together, and it will heal any Wound. Other Farriers take eight drams of Turpentine, four drams of new Virgins wax; melt them in a pewter vessel, and stir them well together, and when they are well melted and mixed, take them from the fire, and by and by whilest they be hot, pour into them half a pint of white Wine, then after they be cold, throw away the Wine, and anoint your hands with Oyl of Roses, and work the Wax and Turpentine well together, after that put them into the pewter vessel again, then put to them half an ounce of the gum of Firr-tree, and three drams of the juyce of Bettony, then seeth them well together until the juyce of Bettony be wasted, then put to it three drams of Womans milk, or the milk of a red Cow, and seeth them once again until the milk be wasted; and then put it in a close pot or glafs, and with this dress any wound whatsoever, and it will heal it. Others use to take Rosemary, and dry it in the shadow, and beat it to powder, then wash the wound with Vinegar, or the Urine of a child. and strew thereon the aforesaid powder, & it will heal an indifferent wound.

Other Farriers take Worm-wood, Marjoram, Pimpernel, Calamint, *Olibanum*, beat them all into fine powder, then take Wax and Barrows grease, and boyl them on a soft fire until they be as thick as an Oyntment or Salve, with this dress any wound and it will heal it. Others use to take the tops of Nettles, Butter, and Salt, and beating them well in a mortar till they come to a Salve, and it will dry and heal a Wound. Now the powder of Honey and Lime, or Turpentine simply of it self, will dry up and skin any Wound. Take Turpentine, Honey, Hogs grease, Wax and Sheeps-fuet of each alike; melt them well together to a Salve, and they will heal any wound. Now if a Horie be goared upon a stake, then you shall cast him, and pour into the wound Butter scalding hot, and

and so let him lye till it be gone down into the bottom; and do thus once a day till the wound be whole. If you desire to keep a wound open, put into it the powder of green Copperas, and it will do it; but if you intend to heal it speedily, then Wheat-flower and Honey well beaten together to a Salve will do it, dressing the wound once a day therewith.

C H A P. CXL.

Of a hurt with an Arrow.

IF a Horse be shot or hurt with an Arrow, tent the hole only with Hogs greafe and Turpentine molten together, and renew it once a day until the wound be whole.

C H A P. CXLI.

Of the healing of any old sore or Ulcer.

OLd Ulcers or sores are of three kinds, the first deep, hollow and crooked, and they be called *Fistulae*; the second broad and shallow, but much spreading and increasing, and they be called *Cankers*; and the last broad, deep, black about the sides and bottom, yet not much increasing, although not at all healing, and they be called *old sores or Ulcers*: They proceed either from some great bruise, wound, or impostume, which is either venomd or abused in healing by contrary salves; or through the flux and abundance of humours flowing down to those parts, through the negligence of a most unskilful Farrier. The signs are, the long continuance of the sore, the thinness of the matter which issueth away, and the blackness of the sore, which is ever full of inflammation.

Now for the cure, according to the opinion of the most ancient Farriers, it is thus: First cleanse the sore well with white Wine; then take Copperas and the leaves of Lillies, beat them well in a mortar with Swines greafe till it come to a perfect Salve, and lay it upon the sore with flax, and then cover it with a plaster.

ster as in case of wounds, and renew it once a day, and it will heal it.

Other Farriers take Lime, and tough Horse dung, and mix it very well together with Pepper, and the white of an Egg, and lay it to the sore, renewing it once a day till the Ulcer be cured.

Other Farriers strew upon the sore the powder of Galls, and that will dry it up.

Others scald it once a day with hot oyl Olive, and that will heal it.

CHAP. CXLII.

A most certain and approved Cure for the healing of any old Ulcer whatsoever.

TAKE Mastick, Frankincense, Cloves, green Copperas, and Brimstone, of each a like quantity, of Myrrhe double so much as of any one of the other; beat all to powder, then burn it on a Chafing-dish and coals, but let it not flame: then as the smoak ariseth, take a good handful of Lint, or fine hurds, and hold it over the smoak, so that it may receive all the perfume thereof into it, then when it is thoroughly well perfumed, put the Lint or hurds into a very close box, and so keep it.

Now when you have occasion to use it, first wash the sore with Urine or Vinegar made warm, then dry it; and lastly, lay on some of this Lint or hurds; and thus do twice a day, and it is a speedy and most infallible cure.

CHAP. CXLIII.

Of bruising or swellings.

ALL bruising and swellings come unto a Horse, either by accident, or by some blow, rush, pinch, or outward venomings; or else naturally, as through the flux of Blood, or through the abundance of Wind. The signs are, the sightly appearance in what place or member soever they be: And the first, which are those
which

which come by accident, are properly called bruifings, or swellings; and the other, if they do rot or corrode, and so turn to matter, are called impostumes.

Now for the general Cure of any bruise or swelling, according to the opinion of the ancient Farriers, it is thus: Take of dry Pitch, of Gum, of each an ounce, of *Galbanum*, of Lime, of each four ounces, of Bitumen two ounces, of Wax three ounces, melt and boyl them very well together, then anoint the sore place therewith once a day, and it will heal it. But if the swelling proceed only from some bruise or rush, then you shall take two pints of Verjuyce, one pint of Barm, and putting a litle fine Hay thereto, boyl them very well together, then bind the hay to the swelling very hot, and after pour on the Liquor; do thus three or four dayes together, and it will take away the swelling.

Other Farriers take the tops of Worm-wood, Pellitory of the Wall, Branck Ursine, beat them well together with Swines grease, then seeth them; then add a pretty quantity of Honey, Linseed-Oyl, and Wheat-meal; then stir it over the fire till all againe be sodden together, then lay it to the swelling, and renew it once a day till the swelling be gone.

Other Farriers use first to prick the swelling with a fleam, then take of Wine-lees a pint, as much Wheat-flower as will thicken it, and an Ounce of Clove; boyl them together, and lay this somewhat warm unto it, renewing it every day once until the swelling either depart or else come to a head, which if it do not, then launce it, and heal it according to a wound.

Other Farriers take of Rozen, of Turpentine, and of Honey, of each half a pound, dissolve them at the fire, then strain them, and add of Mirrh, Sorocol, and the flower of Fenugreek, and of Linseed, of each an ounce; incorporate them altogether, and then make it thick like a Salve with the meal of Lupins, and lay it to the swelling, and it will assuage it.

Other Farriers take of *Galbanum*, and of Ceruse, of each an ounce, of Oyl two ounces, and of Wax three ounces, mix them together over a soft fire, and when they are brought to a Salve, then lay it unto the swelling, and it will assuage.

If you take only rotten Litter, or Hay boyled in strong Urine, and apply it daily unto any swelling, it will take it away.

Now

Now if the swelling be upon the Legs, and come by any strain, Then you shall take of Nerve oyl one pound, of black Sope one pound, of Boars grease half a pound; melt and boyl them all well together, then strain it, and let it cool; then when occasion servert, anoint and chafe your Horses Legs therewith, holding a hot Iron near thereunto, to make the Oyntment enter in the better; then rope up his Legs, and keep them clean from dust or dirt: But if the swelling be upon any part of the back or body, then take of Honey and Tallow of each alike, and boyl them together, then spread it on a cloath and lay it on the swoln place, and let it there stick till it fall away of it self. Now if the swelling proceed from any windy cause, and so appear only in the Horses belly, then you shall take a sharp pointed Knife or Bodkin, and arm it so with some stay that it go not too deep for piercing his guts: then strike him therewith through the skin into his body before the hollow place of his Haunch bone, half a foot beneath the back bone, and the Wind will come out thereat; then if you put a hollow quill therein, or some feather to keep it open a while, the wind will avoid the better, then heal it up again.

It is also very good to Rake the Horse, and to Ride him up and down a little: but if the swelling be under the Horses jaws, or about any part of his head, then you shall take his own dung hot as soon as he makes it, and with a cloath bind it fast thereto, renewing it twice, a day till the swelling be gone. See further in the new additions for the Fistula, marked thus .

C H A P. CXLIV.

Of Impostumes, and first how to ripen them.

Impostumes are a gathering or knitting together of many and most corrupt humorus in any part or member of the body, making that part to swell extremely, and growing into such violent inflammation, that in the end they rot and break out into foul, matter, and running sores; they commonly proceed either from corruption of food, or corruption of blood; they are at the first appearance, very hard, and very sore; which hardness is the principal sign that they will rot. And of these impostumes, some be hot
im:

impostumes, and some be cold; yet for as much as every impostume must first be ripened, and brought to matter before it can be healed, we will first speak of the ripening of them. If therefore you would ripen any Impostume, (according to the opinion of the ancient Farriers:) You shall take of *Sanguis Draconis*, of gum *Arabick*, of new Wax, of Mastick, of Pitch of *Greece*, of Incense, and of Turpentine, of each a like quantity, and melting them together, and straining them, make a plaister thereof, and lay it to the impostume without renewing: and it will both ripen, break, and heal any impostume.

Other Farriers take Swines grease, red wax, and the flower of *Easorbium*, and mixing them on the fire well together, lay it to the impostume, and it will do the like.

Other Farriers take of Honey, and of Wheat-meal, of each a like quantity, and either boyl it in the Decoction of Mallows, or else mix it with the yolk of an Egg, and it will ripen, break, and heal; yet it must be renewed once a day.

Other Farriers take Barley meal, and boyl it with Wine and Pigeons dung, and so lay it to the Impostume plaister-wise, and it will ripen exceedingly.

Other Farriers take a handful or two of Sorrel, and lapping it in a Dock Leaf, roast it in the hot Embers as you would a warden, and then lay it to the Impostume as hot as may be well indured, renewing it once a day; and it will ripen, break, and heal it. A Plaister of Shoo-makers Wax will do the like also.

Other ancient Farriers take Mallow roots, and Lilly roots, and then bruise them, and put thereto Hogs grease and Linseed meal, and plaister-wise lay it to the Impostume, and it will ripen it, break it, and heal it perfectly. See further in the new Additions for the Fistula, noted thus .

C H A P. CXLV.

Of cold Impostumes.

IF the impostume do proceed from any cold Causes, as those which rise after cold taking, or when a Horse is at grass in the Winter season, then you shall take the herb called Balm, and stamp it and Hogs grease well together, and so Plaster-wise apply it to the sore, and it will heal it: or else when the impostume is ripe, open it in the lowest part with a hot Iron, then wash it with warm Urine; after that anoint it with Tar and Oyl well mixt together; and if you make your incision in the manner of a half Moon, it is the better.

Other Farriers take white Mints, and seeth them in Wine, Oyl, Ale, and Butter, and so lay it hot to, and it will heal it.

Other Farriers take Cuckoo-spit, and stamp it with old grease, and so apply it, and it will heal it.

Other Farriers take a handful of Rue, and stamp it well with the yolks of Eggs and Honey, and then apply it plaister-wise, and it will heal any cold impostume. 

C H A P. CXLVI.

Of hot Impostumes.

IF the impostume proceed from any hot causes, as from the extremity of travel, the parching of the Sun, or the inflammation of the blood, then according to the opinion of the ancient Farriers, you shall take Liver-wort, and stamp it, and mix it with the grounds of Ale, Hogs grease, and bruised Mallows, and then apply it to the sore, and it will ripen, break, and heal it: But if you would not have the swelling to break, then take the grounds of Ale, or Beer, and having boyled Mallows therein, bathe the sore place therewith, and it will drive the swelling away. Other Farriers take either Leticis-seed, or Poppy-seed, and mix it with oyl of red Roses, and lay it to the sore plaister-wise, especially at the beginning of the swelling, and it will take it clean away. 

C H A P. CXLVII.

Of the Tetter.

A Tetter is a filthy kind of Ulcer like unto a canker, only it is somewhat more knotty, and doth not spread, but remaineth most in one place, and many times it will remain between the skin and the flesh, like a knotted Farcy, and will not break.

 The cure thereof, according to the opinion of the ancient and understanding Farriers, is, to make a strong Lye with old Urine, Ashes, and green Copperas, and bathe the knots therewith, and it will kill and heal them. Some other Farriers take a Snake, and cut off the head and the tail, and cast them away, the rest cut into small pieces, and roast them on a spit, then take the grease that dropeth from them, and being hot anoint the Sorrance therewith, and it will heal it in a short time: but look that you touch no part of the Horse therewith, save only the Sorrance, for it will poyson and venom.

C H A P. CXLVIII.

Of sinews that are cut, prick'd, or bruised.

IF a Horse by the mischance of some Wound, shall have any of his sinews either cut, prick'd, or sore bruised, then if there be no Convulsion of the sinews, you shall, according to the opinion of the most ancient Farriers, take Tar, and Bean-flower, and a little Oyl of Roses, and mixing them together, lay it hot unto the places, and if it do not present good, take Worms and Salet oyl fryed together, or else the oyntment of Worms, which you may buy of every Apothecary, and applying either of them, they knit the sinews again, if they be not clean asunder. But if there be a Convulsion, then with a pair of shears you must cut the sinew in pieces, and then rake Rozen, and Turpentine, Pitch, and *Sanguis Draconis*; then melting them together, clap it somewhat hot unto the sore; then take flax and put upon it, for that will cleanse and defend it, and than this Medicine there is none better for any swoln joynt whatsoever.

 Now

Now if the joynt be not much sweld, but only that the sinews are exceeding stiff, through the great bruifings, then you shall take of black Sope a pound, and seeth it in a quart of strong Ale till it wax thick like Tar; then reserve it, and when you shall see cause, use to anoint the sinews and joynts therewith, and it will supple them, and stretch them forth, although they be never so much shrunk, as hath been approved.

C H A P. CXLIX.

Of fretting the Belly with the fore-girths.

IF when you saddle and gird your Horse, the girths be either knotty or crumpled, and therewithall drawn too straight, they will not only gall and wound the Horse under the belly very much, but they will also stop the blood which is in the principal veins, called the plateveins, in such sort, as they will occasion most extreme and hard swellings.

The cure whereof, is, according to the general opinion, to take of Oyl de Bay, and Oyl of Balm two ounces, of Pitch two ounces, of Tar two ounces, and one ounce of Rozen; mingle them well together, and then anoint the Horses fore bowels therewith; then take either flox, or chopt flax, and clap upon it, and so let it abide until it fall away of it self, and it will surely cure him.

Other Farriers use to take Vinegar and Sope, and beat them well together, and stir it with a stick or cloath, and then all to rub and wash the galled place therewith, and do thus at least twice a day, and it will dry it up in two or three dayes at the most; but if the galling be about any part of the Horses neck, then you shall take the leaves of Briony, (called the Hedge-vine) and stamp them, and mix them with Wine, and then plaister-wise lay it to the sore, and it will heal it.

C H A P. CL.

Of Blisters,

Blisters are certain waterish hollow blebs, which do arise betwixt the skin and the flesh, proceeding either from slight burnings, scaldings, or chafings, and they be very full of thin matter. The cure thereof, according to the opinion of the most general Farriers, is, first in the Sun to fret them till they bleed; then take the roots of Ivy, and stamping them in a mortar, mix them with as much Tar, Brimstone, and Allom, till they come to a Salve; and then dress the blister therewith, and it will heal it.

C H A P. CLI.

To take away all manner of Bones, Knobs, or any superfluous flesh.

When a Horse hath any bone growing upon any part of his body, more than natural, or when he hath any Lumps or bunches of superfluous flesh, otherwise than of right both belong to his true proportion; then such bones, knots or bunches, are called Excrefcions, proceeding from tough and flegmatick substances, stirred up either by most sore bruises, imperfect healed Wounds, or other naughty putrification of the blood, being most apparent to the eye, and most palpable to the hand.

Now for the Cure, (according to the general opinion of the most ancient Farriers) you shall first use Corrosive medicines, after drawing Medicines, and lastly drying medicines; or more particularly, thus you shall cure them: first with an incision Knife scarifie the Excrefcions, then apply Sulphur and Bitumen, or Coloquintida burnt and sifted, and when it hath eaten the Excrefcion away, then heal it up with drying Salves, as powder of Honey, and Lime, or Bole-armony, or such like. Other Farriers use after they have made the Excrefcion to bleed well, then to take two ounces of the ashes of Vitis, and as much unsleckt Lime mixt with six ounces of strong lye, first strained, then sod till half be consumed, and so brought to a firm substance; then keep it in a glass in a dry place, and apply it to

to the Excreſcion till it have eaten it away, and then heal it up as is before ſaid. Other Farriers uſe to take a pound of ſtrong Lye, and Sope, and a quarter of a pound of Vitriol Romane, one ounce of Sal-armoniack, and as much Roch Allom, and boyl them together until they be very thick, and then with that Oynment eat away the Excreſcion. Others uſe to take of *Egyptiacum* the ſtrongeſt kind, and lay it on the Excreſcion with a Cotten three or four times, and it will take it clean away: This medicine is moſt excellent for any ſplint, and of no ſmall importance, if it be uſed againſt any Fiſtula; for it will ſink it, although it were in the Crown.

C H A P. CLII.

How to eat away any ſuperfluous or dead fleſh.

IF when your Horſe hath any Wound, Ulcer, and other ſore, you ſhall perceive that there groweth therein dead fleſh, which dead fleſh you ſhall know partly by the inſenſibility thereof, and partly in that it is a ſpongy, hollow, naughty fleſh, not ſubſtantial as the true fleſh is, and either of a blackiſh, or an high red Colour; then it ſhall be meet that you ſeek all means poſſible how to conſume and eat away that ſuperfluous and naughty fleſh, becauſe the ſore that is peſtered therewith, neither can nor will ever heal, till it be cleaned of the ſame: Therefore, according to the opinion of the moſt ancient Farriers, The beſt means to eat it away, is, to boyl freſh greaſe and Verdigreſe, of each alike quantity together, and either to tent or Plaſter the ſore therewith, until the dead fleſh be conſumed.

Other Farriers take either the ſcrapings of Harts-horn, or Ox-horn, and mixing them with old Sope, dreſs the ſore therewith, and it will eat away dead fleſh.

Other Farriers take *Spongia Marina*, or Sea-ſponge, and therewith dreſs the ſore, and it will do the like. Other Farriers uſe the powder of Riſagallo, or Riſagre, but it is a great deal too ſtrong a fretter. Others uſe Littergy, or Lime in Lye, but they are like wiſe very violent and ſtrong eaters.

Others uſe to take either White or black Eleborus, Ink, quick-Sulphur, Orpiment, Littergy, Vitriol, unſleck Lime, Roch Allom, Galls, Soot, or the aſhes of Avellan, of each half

an ounce, and they will consume dead flesh; likewise Quick-silver extinct, and Verdigrease, of each an ounce made into powder, will do the like: the juyce of Borage, of Scabious, of Fumitory, and of a Dock, of each half an ounce; a little old Oyl and Vinegar boyl with a soft fire, put to it Tar, and it will likewise eat away any dead flesh.

There be other Farriers which take Cantharides, Ox dung, and Vinegar, and mix them well together, and lay it to the sore, and it will fetch away the dead flesh. Others use first to pounce the sore with a Razer, then anoint it with grease, and strew upon it a pretty quantity of Orpiment. Other Farries use in stead of Risagallo, to take the powder of Verdigrease and Orpiment, of each an ounce, of unsleckt Lime and Tartar, of each two ounces; mix them together, and therewith dress the sore, after you have waht it well with strong Vinegar; and if you please, you may add thereunto Vitriol and Allom, for they are both consumers of dead flesh. Other Farriers take the powder of Tartar and Mans dung burnt with Salt, and then beaten into powder, and strewed on the sore; or else take Salt, unsleckt Lime, and Oyster-shells, and beat them in a mortar with strong Lye, or old Urine, till it be like a paste: then bake it in an Oven, and after beat it to a powder, and strew it on the sore, and it will eat away the dead flesh.

Other Farriers use first to wash the sore with Ale, wherein Nettle-seeds have been sodden, and then strew upon it the powder of Verdigrease.

Now to conclude, you must ever observe, that before you use any of these medicines, you do shave away the hair, that it be no impediment to the Salve; also when you have dress it once, and see that there is no asker raised, then you shall dress it with some mollifying or healing Salve till the asker come away, and then dress it with your eating Salve again: and thus do until you behold that all the dead flesh be consumed, and that there is nothing but perfect and sound flesh, and then heal it up as in case of Wounds. Also Precipitate simple of it self will eat away any dead flesh.

C H A P. CLIII.

For Knots in joynts, Hardness, Cramps, or any Inflammations.

There do grow in joynts three sorts of swellings: namely, a hot swelling, a hard swelling, and a soft swelling; all which you may easily distinguish by your feeling; and they do proceed either from abundance of gross humours ingendred by foul keeping, or else by accident, as from some Wound, Ru.h, or Strain. The Cure whereof, according to the opinion of the most ancient Farriers, is, to beat the powder called Diapente, together with Oyl, till it be like an Oyntment, and then apply it once a day to the grief, and it will take it away, especially if it be a Cramp, or an Inflammation.

Other Farriers use to incorporate with oyl half an ounce of liquid Storax, two ounces of Turpentine, five of Wax, and ten of Bird-Lime, and apply that to the grief, and it will ease it. Other Farriers take Wine, and old Oyl, and Tar, mingled and boyled together, and therewith dress the sore place, and it will help it.

Others of our old and latter Farriers take half a pound of grease, three scruples of Mustard, and the like of Bay Salt, mix these with Vinegar, and apply it to the grief. Others use to take a plaister of figs, and the roots of fern and rocket, or mingle them with Grease and Vinegar, and apply it to the grief. Other Farriers use to take the *Unguentum Basilicon*, which is made of Honey, Storax, *Galbanum*, *Bdelium*, black Pepper, Bay-berries, the marrow of a Stag, of each a like quantity; twice as much of Armoniack, and of the powder of Frankincense as much as of any of the other, and incorporate them with Sheeps suet, and apply it to the grief, and it will help it.

Other Farriers take dry Pitch, pitch of Greece, of each one part, of *Galbanum*, and of Lime, of each four parts, of *Bitumen* two parts, of Wax three parts; melt them all together, and anoint the place therewith very hot, and it will take away the grief, and peradventure also the eye-sore.

C H A P. CLIV.

How to cure any Wound made with the shot of Gun-powder.

According to the opinion of the most anciens Farriers, you shall first with a probe, or long instrument, search whether the Bullet remain within the flesh or no; and if you find that it doth, then with another instrument for the purpose, you shall take it forth if it be possible; if otherwise, let it remain: for in the end nature it self will wear it out of its own accord, without any grief or impediment; because Lead will not corrode or canker: Then to kill the fire, you shall take a little Varnish, and thrust it into the wound with a feather, anointing it within even unto the bottom: Then stop the mouth of the wound with a little soft flax dipped in Varnish also; then charge all the swollen place with this charge: Take of Bole-armony a quartern, of Linseed beaten into powder, half a pound, of Bean-flower as much, and three or four Eggs, shels and all, and of Turpentine a quartern, and a quart of Vinegar, and mingle them well together over the fire, and being somewhat warm, charge all the sore place with part thereof, and immediately clap a cloath or piece of Lether upon it, to keep the wound from the cold air, continuing both to anoint the hole within with Varnish, and also to charge the swelling without, the space of four or five dayes: Then at the five dayes end, leave anointing of it, and tent it with a tent reaching to the bottom of the Wound, and dipped in Turpentine and Hogs grease molten together, renewing it every day once or twice until the fire be thoroughly killed, which you shall perceive by the mattering of the wound, and by falling of the swelling: For as long as the fire hath the upper hand, no thick matter will issue forth, but only a thin yellowish water, neither will the swelling assuage; and then take of Turpentine washed in nine several waters, half a pound, and put thereunto three yolks of Eggs, and a little Saffron, and tent it with this oyntment, renewing it every day once until the Wound be whole. But if the shot have gone quite through the wound, then you shall take a few Weavers Linnen thrums, made very Knotty, and dipping them first in Varnish, draw them clean through the wound, turning them up and down in the

the Wound at least twice or thrice a day, and charging the wound on either side upon the swoln places, with the charge afore-said, until you perceive that the fire is killed; then clap on a comfortable Plaister upon one of the holes, and tent the other with a tent in the Salve, made of wash Turpentine, Eggs, and Saffron, as is before said. Other Farriers use only to kill the fire with oyl of Cream, and after to heal the wound up with Turpentine, Wax, and Hogs grease molten together.

Other Farriers kill the fire with Snow Water, and charge the sweld place with Cream and Barm beaten together, and then heal up the Wound by dipping the tent in the yolk of an Egg, Honey, Saffron well beaten and mixt together. 

C H A P. CLV.

Of burning with Lime, or any other fiery thing.

According to the opinion of the ancient Farriers, you shall first wash the sore round about, and in every part very clean with warm Urine; then kill the fire, by anointing the place with oyl and Water beaten together, dressing him so every day until the sore be all raw, and then anoint it with Hogs grease, and strew thereupon the powder of unsleckt Lime, dressing him thus every day once until he be whole. 

Other Farriers use first to wash and cleanse the sore with Salet Oyl only warmed, then to kill the fire with Cream and Oyl beaten together, and when it is raw, then to spread upon it Cream and Soot mixt together; and lastly, to strew upon it the powder of Honey and Lime, until it be perfectly skinned.

C H A P. CLVI.

Of the biting with a mad Dog.

IF your Horse at any time be bitten with a mad Dog, the venom of whose teeth will not only drive him into an extreme torment, but it will also infect and inflame his blood, in such sort, that the Horse will be indangered to dye mad. The cure thereof, according

According to the opinion of the ancient Farriers, is, to take of Goats dung, of flesh that hath lain long in Salt, and of the herb Ebulus generally called Danwort, of each half a pound, and forty Walnuts; stamp all these together, and lay part thereof to the sore, and it will suck out the venom, and heal up the wound; but upon the first dressing, you shall give the Horse Wine and Treacle mixt together to drink.

There be other Farriers, which first give the Horse Sack and Salet Oyl to drink, then with a hot Iron cauterize and burn the sore; and lastly, heal up the wound with the salve first recited.

Other Farriers first give the Horse two or three spoonful of the Powder of Diapente to drink in a pint of Muskadine; then take a live Pidgeon, and cleaving her in the midst, lay it hot to the Wound, and it will draw out the venom; then heal the sore with Turpentine and Hogs grease well molten together. The leaves of Aristoloch bruised will take away the poison.

CHAP. CLVII.

Of hurts by the tusks of a Boar.

IF a Horse be stricken with the tusks of a boar, you shall then take Copperas or Vitriol, and the Powder of a Dogs head being burned, after the tongue hath been pulled out, and cast away, and mixing them together, apply it once a day to the sore, and it will cure it: Yet before you dress it, first wash the sore very well, either with Vinegar, or with white Wine, or Urine.

CHAP. CLVIII.

*To heal the biting or stinging of Serpents, or any venomous beast
Whatsoever.*

IF your Horse be either bitten or stung, either with a Serpent, or any other venomous beast, which you shall easily know by the suddain swelling either of the body or member; then you shall first chase him up and down until he sweat, and then let him blood in the roof of the mouth; and lastly, take a young Cock or a Pidgeon, and

and cleaving it in the midst, clap it hot to the Wound, and then give the Horse white Wine and Salt to drink. Other Farriers take a good quantity of the herb called Sanicula, stamp it, and temper it together with the milk of a Cow, till it be all of one colour, and give it the Horse to drink, and it will heal him. Other Farriers clap to the fore Hogs dung, or Ox dung, or Henbane bruised, or else the ashes of Reeds; then give him to drink Mug-wort, or great Tansie, and Wine and Camomil stamp together; Or else give him Wine and *Oleum Rosatum* mixt together.

Other Farriers make a Plaister of Onions, Honey, and Salt, stamp and mingled together, and lay that to the sore place, and give the Horse Wine and Treacle to drink, or else white Pepper, Rue, and Time, mixt with Wine. Other Farriers take *Aphodillus*, *Hastula Regia*, stamp with old wine, and lay to the sore: for it is most soveragin good.

C H A P. CLIX.

Of Lice or Vermin, and how to kill them.

THe Lice or Vermin which breed upon a Horse, be like unto geese Lice, but somewhat bigger, and do breed most commonly about the Ears, Neck, Mane, Tail, and generally over the whole body; they do proceed from poverty, or feeding in Woods, where Trees are continually dropping upon them: The signs are, the Horse will be alwayes rubbing and scratching, and albeit, he eat much meat, yet he will not prosper: And with this continual rubbing: he will fret and wear away all his Mane and Tail, and you shall also perceive the Lice, when the Sun doth shine, running on the tops of the hairs. The cure according to the opinion of the ancient Farriers, is, to take of Sope one pound, and Quick-silver half an ounce, mix and beat them together well, until the Quick-silver be kild, and then anoint the Horse all over therewith, and it will consume the Lice presently.

Other Farriers take Staves-aker and Sope, and mixing them together, anoint the Horse all over therewith. Others take unripe Mulberries, and their roots or stalks, and seeth them in strong Urine, and then wash the Horse therewith, after that anoint all his body

over with *Sanguis Draconis*, the juyce of Leeks, Salt, Pitch, Oyl^r and Swines greafe, very well mixt together.

☞ Others use to chafe all his body over with Quick-silver, and soft greafe mixt together, till the Quick-silver be kild, and in two or three dressings the Lice will be consumed.

C H A P. CLX.

How to save Horses from the stinging of Flies in Summer.

I F you will save your Horse in the Summer time from the stinging or biting of flies, which is very troublesome unto them, then you shall anoint all the Horses body over either with oyl and Bayberries mingled together, or else bind unto the head-stal of his Collar, a sponge dipped in strong Vinegar: Some use to sprinkle the stable with water wherein herb of Grace hath been laid to steep; or else to perfume the stable with the smoke of Ivy or Calamint, or with Giche burned in a pan of coals.

☞ But the surest way of all, both in the stable and abroad, is, to make two good wisps of Rue, and therewithall to rub the Horses body all over, and no flye will light upon him, or touch him, as hath been often approved.

C H A P. CLXI.

Of bones being broken, or out of joynt.

☞ O U R common English Farriers are very far to seek in this cure; because they do neither perfectly acquaint themselves with the members of a Horse, nor have so much invention in this extremity, to make a Horse, being an unreasonable creature, to suffer like a reasonable person; and also in that the old traditions in Horse-leachcraft affirm, that all fractures above the Knee are incurable; and so despairing, they cease to make practice: But they are much deceived: for neither the fracture above the Knee, nor the fracture below the Knee, is more incurable in a Horse than in man, if the Farrier can tell how to keep the Horse from struggling or tormenting the member grieved.

If therefore your Horse have any bone broken, which is most easie to be discerned by the deprivation of the use of that member, and as easie to be felt by the separation of the bones, the one part being higher than the other, besides the roughness and inequality of the place grieved: you shall then for the Cure thereof, First take a strong double Canvas, which shall be as broad as from the Horses fore-shoulder to the flank; and shall have another double Canvas, which shall come from between the Horses fore-booths up to the top of the withers, where meeting with the rest of the Canvas, and having exceeding strong loops, to which strong ropes must be fastned, you shall by main force sling up the Horse from the ground, so as his feet may no more but touch the ground: And if it be a fore Leg that is broken, then you shall raise him a little higher before than behind: If a hinder Leg, then a little higher behind than before, so that the Horse may rest most upon the Members most sound. When your Horse is thus slung, then you shall put the bones into the right place; which done, wrap it close about with unwashed Wool newly pulled from the Sheeps back, binding it fast to the Leg with a smooth Linnen roller soaked before in Oyl and Vinegar mingled together, and look that your Roler lye as smooth and plain as may be; and upon that again, lay more Wool dipt in Oyl and Vinegar, and then splint it with three broad, smooth, and strong splints, binding them fast at both ends with a thong, and in any case let the Horses Legs be kept out very straight, the space of forty dayes, and let not the bones be loosened above thrice in twenty dayes, unless it shrink, and so require to be new drest and bound again; but fail not every day once to pour on the fore place, through the splints, Oyl and Vinegar mingled together: And at the forty dayes end, if you perceive that the broken place be sowed together again with some hard Knob or Gristle, then loose the bonds, and ease the Canvase, so as the Horse may tread more firmly upon his fore foot, which when he doth, you shall loosen him altogether, and let him go up and down fair and gently, using from hence forth to anoint the fore place either with soft grease, or else with one of these Plaisters, or Oyntments: Take of *Sphma argenti*, of Vinegar, of each one pound, of Salet Oyl half a pound, or Armoniack, and of Turpentine, of each

each three ounces, of Wax, and of Rozen, of each two ounces, of Bitumen, of Pitch, and of Verdigrease, of each half a pound, boyl the Vinegar, Oyl and *Spuma argenti* together, until it Wax thick: then put thereunto the Pitch, which being molten, take the pot from the fire, and put in the Bitumen, without stirring at all, and that being also molten, put in then all the rest, set the pot again to the fire, and let them boyl all together, until they be all united in one: that done, strain it, and make it in Plaister form, and use it as occasion shall serve.

Other ancient and well experienced Farriers, take of liquid Pitch one pound, of Wax two ounces, of the purest and finest part of Frankincense one ounce, of *Amoniacum* four ounces, of dry Rozen and of *Galbanum* of each one ounce, of Vinegar two pints; boyl first the Vinegar and Pitch together, then put in the *Amoniacum* dissolved first in Vinegar, and after that the aforesaid Drugs: and after they have boyled all together, and be united in one, strain it, and make it into a Plaister, and use it according to occasion.

Other Farriers take of old Salet oyl a quart, and put thereunto of Hogs grease, of *Spuma Nitri*, of each one pound, and let them boyl together until it begin to blub above: then take it from the fire, and, when you use any of the Oyntment, let it be very hot, and well chafed in; and then one of the two former Plaisters folded above it, and it is most soverain and comfortale for any bone that is broken.

C H A P. CLXII.

Of bones out of joynt.

IF a Horse have any of his bones out of the joynt, as either his Knee, his shoulder, his pastorn, or such like, which you shall perceive both by the uncomliness of the joynt, and also feel by the hollownes of the member that is displaced: Then your readiest Cure, is, to cast the Horse on his back, and putting four strong pastorns on his feet, draw him up so as his back may no more but touch the ground; then draw the grieved Leg higher than the rest, till the poise and weight of his body have made the joynt to shoot into

into its right place again; which you shall know when it doth, by a suddain and great crack which the joynt will give when it falleth into the true place; then with all gentleness loos the Horse, and let him rise: And then anoint all the grieved place, either with the last oyntment rehearsed in the last Chapter, or else with the oyl of Mandrake, or the oyl of Swallows; both which are of most soverain vertue.

C H A P. CLXIII.

To dry up humours, or to bind, being a stricitive, or binding charges.

TAke of *Unguentum Tripharmacum*, made of Litory, Vinegar, and old Oyl, boyled till they be thick, only take as much oyl as of both the others, and it will stop and stay the flux of any humours.

If you take strong Lye, it is a great drier, and a binder of humours.

Dissolve in Vinegar, Rozen, Assalto, and Myrrhe, of each an ounce, of red Wax half an ounce, and of Armoniack half an ounce, mingle them well together in the boyling; for this Salve drieth wonderfully, bindeth all loose members, and comforteth all parts that are weakned.

Take of Lard two pound, and when it is sodden, strain it with three ounces of Ceruse, and as much Allom melted, and it both drieth and binderh exceedingly.

Dry figs beaten with Allom, Mustard, and Vinegar, do dry abundantly.

Oyl or soft grease beaten to a Salve with Vitriol, Galls, and Allom, and the powder of Pomegranats, Salt and Vinegar, both dry and bind sufficiently.

Sope and unsleckt Litne mixt together, drieth perfectly after any incision.

Verdigrease, Orpiment, Sal-armoniack, and the powder of Colocintida, of each alike, made into a Plaister, with Milk or Wax, drieth and bindeth:

The grease of Snakes roasted, the head and tail being cut away, is a great drier.

To conclude, the bark of a Willow tree burnt to ashes, is a great drier, and binder, as any simple whatsoever.

C H A P. CLXIV.

A plaister to dry up superfluous moisture, and to bind parts loosened.

TAke of Bitumen one pound, of the purest part of Frankincense three ounces, of *Baelium Arabicum* one ounce, of Deers suet one pound, of *Populeum* one ounce, of *Galbanum* one ounce, of the drops of Storax one ounce, of Common Wax one pound, of Resin Cabial half a pound, *Viscus Italicus* one ounce and a half, of Apoxima one ounce, of the juyce of Hyssop one ounce, of the drops of Armoniack one ounce, of Pitch half a pound: let all these be well and perfectly molten, dissolved, and incorporated together according to Art, and then make a plaister thereof.

C H A P. CLXV.

Another plaister to dry up any swelling, wind-gall, splent, or bladder, in or about the joynts.

TAke of Virgins Wax half a pound, of Rozen one pound and a quarter, of *Galbanum* one ounce and an half, of Bitumen half a pound, of Myrrhe secondary one pound, of Armoniack three ounces, of Costus three ounces: boyl all these things together in an earthen pot, saving the armoniack and Costus, which being first ground like fine Flower, must be added unto the other things, after that they have been boyled and cooled, and then boyled all together again, and well stirred, so as they may be incorporated together, and made all one substance, and then applying as occasion shall be administred.

C H A P. CLXVI.

Receipts to dissolve humours.

TAke of Worm-wood, Sage, Rosemary, and the bark of an Elm, or of a Pine, of each a good quantity, and boyl them in oyl with a good quantity of Linseed; and making a bathe thereof, bathe the grieved part, and it will dissolve any humours that are gathered or bound together.

A pound of figs stamp with Salt till they come to a perfect salve, dissolveth all manner of humours, by opening the pores, and giving a large passage.

C H A P. CLXVII.

How to mollifie any hardnes.

TAke of Linseed pun'd, and of Fenugreek, of each four ounces, of Pitch and Rozen, of each three ounces, of the flowers of Roses two ounces, Pitch of Greece three ounces; boyl them together, then add three ounces of Turpentine, six ounces of Honey, and a little Oyl: and then applying this salve, it will mollifie and soften any hard substance.

Malvavisco well sod, and stamp with *Oleum Rosatum*, being laid hot to any hardnes will make it soft.

Boyl Branck urfine, and Mallows together, and beat them with Oyl and Lard, and they will soften much.

Malvavisco, Cole-worts, Branck urfine, herb of the wall, and old greafe punded, doth mollifie very much.

The oyl of Cypres, both mollified and healeth.

Wheat-meal, Honey, Pelitory, Branck urfine, and the leaves of Worm-wood being beaten with Swines greafe, and laid hot unto any hard tumour, doth suddenly mollifie it, and is passing good for any stripe also.

Grease, Mustard-seed, and Comin boyled together, doth mollifie very much:

Take of Sope half an ounce, of unsleckt Lime an ounce, and mix them well with strong Lye, and it will mollifie even the hardest hoofs.

The juyce of the Leaves and roots of Elder, or a plaister made thereof, doth dry up and mollifie humours marvelously.

So doth the juyce of the tops of Cypress, and dry Figs, macerated in Vinegar, and strained, of each three ounces: And if you add to it of Salt-niter one ounce, of armoniack half an ounce, of Aloes and Opoponax a little, and make it into an Oyntment, it will mollifie any hardnes very sufficiently.

Mallows, Nettles, Mercorella, and the roots of Cowcumbers, and old Turpentine, being beaten together with old grease, will mollifie any hardnes speedily.

C H A P. CLXVIII.

To harden any softness.

THe sole of an old shoe burnt, and sodden in Vinegar, will harden hoofs; and so will also the powder of Galls boyled with Bran and Salt in strong Vinegar.

The powder of Honey and Lime, or the Powder of Oyster-shells, or the powder of a burnt felt, or thick Cream and Soot mixt together, will harden any fore whatsoever.

C H A P. CLXIX.

To Conglutinate.

I*ris Illirica* beaten and sifted, mingled with Pepper, Honey, Cur-rants, and given the Horse to drink with Wine and oyl, helpeth and conglutinateth any inward rupture or burstnes whatsoever.

Dragant, Saffron, the fruit of the pine, with the yolks of Eggs, given likewise to drink with Wine and oyl, doth also conglutinate any inward member or vein broken.

Incense, Mastick, and cure, doth the like also. Poligano sod in Wine, and given to drink is good also.

The roots and seeds of Alparagus sod in water, and given to the Horse; then after for three dayes give him Butter and Opoponax with Honey and Myrrhe, and it will conglutinate any inward Ulcer or Rupture whatsoever.

C H A P. CLXX.

To mundifie and cleanse any sore.

TAKE oyl of Olives, Swines greafe clarified, the greafe of a young Fox, Turpentine, allorn, and white Wax, seeth them all together till they be most thoroughly incorporated together, and with this Oyntment dress any foul sore whatsoever, and it will mundifie and cleanse it most sufficiently.

C H A P. CLXXI.

Of Repercussive medicines, or such as drive back humours.

Repercussive medicines, or such as drive evil humours back, are commonly called amongst Farriers, Plaisters or Salves defensive, and are to be used about every great Wound or Ulcer, lest the flux of humours flowing to the weak part, both confound the medicines, and breed more dangerous Exulcerations. Now of these Repercussive medicines these are the best, either Vinegar, Salt, and Bole-armoniack beaten together, and spread round about the sore, or else white Lead and Sallet oyl beaten also together, or red Lead and Sallet oyl, or else *Unguentum Album Camphoratum*, and such like.

C H A P. CLXXII.

Of burning Compositions.

Burning Compositions are for the most part Corrosives, of which we shall have occasion to speak more at large in a Chapter following: yet for as much as some are of better temper than others, you shall here understand, that of all burning compositions, the gentlest is *Unguentum Apostolorum*; next to it is Verdigrease and Hogs greafe beaten together; next to it is Precipitate, and Turpentine mixt together: next to it is arsnick allayed with any oyl, or healing salve: Next to it is Mercury sublimare, likewise allayed with

some cooling salve: And the worst is Lime and Sope, or Lime and strong Lye beaten together, for they will corrode and mortifie the soundest part or member whatsoever.

CHAP. CLXXIII.

For all manner of hurts about an Horse whatsoever.

TAKE an ounce of Oyl, two ounces of Turpentine, and a little Wax, mingle them at the fire: this will heal any Wound or Gall, and keep it clean from filth, water, and dirt.

Take Vinegar and Honey, and boyl it together, when it is cold, add the Powder of Verdigrease, Copperas and Brass burnt, mingle them well together: this will take away all ill and dead flesh, and cleanse and heal any old Ulcer.

Take Wax, Pitch, Swines grease, and Turpentine, and mix them well together: this will heal any bone, spel, or any other stub.

Take house Snails, and seeth them in Butter, and they will draw out any Thorn or Nail, being oft renewed. So will also the roots of Reeds being bruised and applied.

The roots of an Elder beaten to powder, and boyled with Honey, is good for any old sore whatsoever.

Take Salt, Butter, and Honey, or white Wax, Turpentine, and oyl *Rosatum*, of each like quantity, with twice as much Bean-flower as of any of the other: mix it very well together, and make it into a Salve, and it will heal any sore, either old or new whatsoever.

Take Wax, Turpentine, and Deers suet, or the Marrow of a Stag, and mix them well together, and it will heal any Wound or any Impostume whatsoever: so will also Wax, Oyl, Mastick, Frankincense, and Sheeps suet, well molten together: or the Powder of Mastick, Frankincense, and Aloes, mixt and molten well together.

The whites of Eggs beaten with *Oleum Rosatum*, and Salt, and so laid upon flax hurds, healeth any Wound that is not in any principal part where the Muscles are.

If you will purifie, cleanse, and heal any old sore, take three pints of well clarified Honey, and boyl it with one pint of Vinegar, and one of Verdigrease, and so apply it: or else take of Mastick, and
Ver-

Verdigrease, of each half an ounce, of Frankincense one ounce, of new Wax four ounces, of Turpentine six ounces, and of Hogs grease two pound: boyl and incorporate all these together, and then apply it to the sore place, and it will both cleanse, purifie, and heal.

Chick-weed, Groundsel, Graise, and stale Urine, very well boyled together, will heal any galling or hurts by halter, or other accident, or any strain, or stripe, or swelling, which cometh by any such like mischance.

Take of new Milk three quarts, a good handful of Plantain, let it boyl till a pint be consumed: then add three ounces of Allom made into Powder, and one ounce and an half of white Sugar-candy, made likewise into Powder: then let it boyl a little, till it have a hard curd, then strain it: with this warm, bathe any old Ulcer, then dry it, and lay on some *Unguentum Basilicon*; this cleanseth, drieth, strengthæth, and killeth the itch, and healeth the foulest Ulcer either in man or beast that may be. Also, if you take of milk a quart, of Allom in Powder two ounces, of Vinegar a spoonful; when the milk doth seeth, put in the Allom and Vinegar, then take off the curd, and use the rest, and it will likewise dry up and heal any foul old sore whatsoever.

C H A P. CLXXIV.

How to make the powder of Honey and Lime.

TAKE such a quantity of unsleckt Lime as you shall think fit, beat it into very fine powder: then take so much Honey as shall suffice to mingle it together, and make it into a very stiff paste, in the form of a thick Cake or Loaf: then put the same Cake or Loaf into a hot Oven, or a burning fire, till it be baked, or burnt glowing red: then take it forth, and when it is cold, beat it into very fine Powder, and then use it as occasion shall serve. It drieth, healeth, and skinneth any sore whatsoever very marvelously.

C H A P. CLXXV.

The order of taking up of Veins, and wherefore it is good.

First, before we speak of the order of taking up of Veins, you shall understand, that all Veins, except the Neck-veins, the Eye-veins, the Breast-veins, Palat-veins, and the Spur-veins, are to be taken up, and not striken with the fleam: partly because they are so little and thin, that if you strike them, you shall either in danger the striking thorough them; or partly because they are so near adjoyning to Arteries and Sinews, that if in striking you should hit and prick either Artery or Sinew, it were a present laming of the Horse, as I have oftentimes seen and noted in the practice of many ignorant Smiths. Now touching the order of taking up of a vein, it is thus.

First, you shall cast your Horse either upon some soft ground, grass, some dunghil that is not very moyst, or in some lightsome House, upon good store of sweet straw; then when the Horse is thus cast, you shall look for the vein which you intend to take up, and if it be either so small, or lye so deep, that you can hardly perceive it: Then you shall with warm Water, rub, chafe, and bathe all that part where the vein lyeth; then take a narrow silk garter, and a handful or two above the vein, (if it be of any of the Horses Legs) garter the member very straight; but if it be a vein to be taken up on the body or breast, then with a good fursingle either close behind the hinder point of the shoulder, or within a handful of the place, where you mean to take up the vein, gird him very straight, and presently you shall see the vein to arise; then mark that part of the skin which covereth the vein, and with your finger and your thumb, pull it somewhat aside from the vein, and then with a very fine incision Knife slit the skin clean through, without touching the vein, and in any wise cut no deeper than through the skin, and that long wise too, in such sort as the vein goeth, yet not above an inch at the most in length; that done, remove your finger and your thumb, and the skin will return again into his place, right over the vein as it was before, in so much, that but opening the orifice, or slit, you shall see the vein lye blew, and bare before your eyes;

eyes; then take a fine smooth Cronet, made either of the Brow andler of a Stag, or of an old Buck, and thrust it underneath the vein, and lift it up a pretty distance, (that is to say, half the thickness of the Cronet) above the skin; that done, you shall then loose either the Garter or the Suringle, for they are but only helps for you to find out the vein; and when the vein doth appear, have a special care that you touch not the sinews.

Now when you have thus taken your vein up on your Cronet, you shall then either put a red silk thrid, dipt in Oyl of Butter, or else a small Shooe makers thrid, underneath the vein also, somewhat higher than the Cronet, which silk or thrid must serve to knit the vein when time requires; then the Cronet standing still as before, with your Knife slit the top of the Vein long wise, the length of a Barly corn, that it may bleed: then stopping the nether part of your vein with the silk, or the thred suffer it to bleed from above; then with your silk or thred removed above, knit it fast with a sure knot above the slit, suffering it only to bleed from beneath, and having bled there also sufficiently, then knit up the vein beneath the slit with a sure knot, then fill the hole of the vein with Salt, and heal up the Wound of the skin with Turpentine and Hogs greafe molten together, or else with a little fresh Butter, laid on with a little flax or soft tow is sufficient.

Now the vertue which redounds from this taking up of veins: first, it is very necessary, and doth ease all griefs, strains, and stiffness of the Limbs: for the taking up of the plat veins easeth all pains in the breast, and griefs in the chest; the taking up of the fore-thigh veins easeth Farcies, and swellings of the Legs: the taking up of the Shackle veins before, helpeth Gourding, Quitter-bones, and the swelling of the joynts, scabs and scratches: the making up of the hinder hough veins, helpeth Spavens of both kinds, most especially, any Farcy in those parts, and generally all swellings or impostumes; the taking up of the pastorn veins behind, helpeth swellings about the Cronet, or nether joynts, pains, Mules, and all manner of Kibed heels, besides sundry other such like diseases.

C H A P. CLXXVI.

Of Cauterizing, or giving the fire, the kinds and uses.

THe giving of fire, which amongst the best Farriers is called Cauterizing, and amongst the simpler burning, searing, or blistering, is, (according to the general opinion of all the most ancient Farriers, the chiefest Remedy) and as it were the last refuge of all Diseases incident to any Horses body, whether they be Natural or Accidental: for the Violence of fire separating and digesting all manner of humours into a thin air, and loose body, cleanseth and avoideth those grossnesses which are the material causes of all Putrifaction and Ulceration. Now of Cauterization, there be two kinds; the one of them Actual, which is that which is done by the hand, and with the Instrument, that is to say, of the hot Iron of what fashion soever; the other Potential, which is done by the applying of a Medicine, whose nature is either Corrosive, Putrifiable, or Caustick.

Now the first of these, which is the Cauterize actual, is principally to be used when there is any apostumation in any sinew, part, or member, or amongst any of the most principal Veins: also when you shall dismember or cut away any joynt, or make any incision, where there is fear of any flux of blood, or where you shall find either the skin or Muscles shrunk or straightned; and in many such like cases.

The Cauterizing potential is to be used in old cankered Ulcers, Wens, or any spongy excrescions, either of flesh or bone whatsoever, of whose natures and properties you shall read more hereafter in a following Chapter.

C H A P. CLXXVII.

Of the Cauterize actual, and the form of instruments.

AN actual Cautery, according to the opinion of the most ancient Farriers, being moderately used, is a notable remedy to stop all corruption in members, to keep perfect the complexion of the

the same, and also stanch the blood; only you must have a careful regard, that in the handling of your Iron you touch neither Sinews, Tendons, Cords nor Ligaments, lest you do utterly disable the member, or breed Cramps or Convulsions; except it be when you dismember or cut away any joynt: As when you do make Curtals, geld Horses, or such like: and then your Cautery is to be used only to sear the Veins, Sinews, and Ligaments, till such time that you are perfectly assured that all Flux of blood is stopped whatsoever.

Now again, the actual Cautery bindeth together parts loosened, it doth attenuate things blown, and puffed up, it drieth up superfluous moisture, it both looseth, disperseth, and divideth evil matter gathered into knots, it asswageth old griefs, it rectifieth those parts of the body that are corrupted by any manner of way, reducing them to their first perfect estate, and suffereth no abundance of evil humours to grow or increase: For the skin being separated, and opened with the hot Iron, all putrifaction whatsoever through the vertue of the fire, is first digested and ripened, and then so dissolved, that the matter doth issue out abundantly at the holes, whereby the grieved or sickned member is now healed, and eased of all pain and grief; yea, and insomuch that the holes being once closed, and close shut up, the place is stronger and better knit together, and covered with a tougher and harder skin than ever it was before; only the greatest blemish that can any way be found in Cautery is, that it commonly leaveth a great skar, which is many times an eye sore more than is tolerable: and therefore, the use of Cauterizing is only to be preferred but in desperate cases of great extremity: for albeit it work foul, yet I am perswaded it is most certain, and it works most sure.

Now as touching the instruments wherewith you must Cauterize, their substance and proportion, you shall understand, that the most curious Farriers do prefer either Gold or Silver to be the best metal to make them of, in that few or no evil accidents do follow where they burn: But the wisest, best, and most skilful Farriers, take Copper to be sufficient enough, and a metal without anylawful exception; yet where Copper Instruments cannot be had, there you may with commendations enough use such instruments as are made of Iron, and find your work nothing at all hindered.

Now for the fashion, or proportion of your Instruments, or Irons, they are to be only referred to the sore or place grieved, wherewith you are to meddle, according to the diversity whereof your Instruments are to be made of divers fashions; as some are to be made Knife-wise, either with thin edges, or broad edges; and they be called drawing Knives, or searing Knives, because they are principally, employed in the drawing of straight lines, shallow, or deep, and sometimes in circular or divers squares: some are made like straight, and some like crooked Bodkins, and they are employed either in fleshy Excrecions, to cause Exulcerations, or else in Impostumes, to open small passages for the matter; some are made like hooks or sickles, and they are to be used where the Wound is crooked, for the burning out of dead flesh, or such like hidden evils, which cannot be reacht by any straight instruments: Others are made either with great Buttons, or little Buttons at the end, and they are used to open Impostumes, or else to burn into the sound flesh, where you intend to make any new sore or issue for the drawing or keeping back of other evil humours. And in making of these Irons, the Farriers own judgement is to be of great value, because he must either increase or diminish them according to the manner of the place grieved; and be sure that he ever make them fit for his right purpose.

Now for the use of these Instruments, there are two principal things to be regarded: First, the heating of the Iron, and next, the true temper, or bearing of the Farriers hand.

Touching the heating of the Iron, you shall understand, that the back of the Iron must never be so hot as the edge, that is to say, you must never make the back of the Iron red hot, for fear that thereby it yield too much heat, and consequently breed inflammation: therefore, whensoever you see the back of your Iron as hot as the edge, you shall a little cool it with water.

Now for the temper, of bearing of your hand, you shall understand, that the more evenly, and light it is done, so much the better it is done; and herein is to be considered, the fineness or thickness of the Horses skin, which you shall know most commonly by his hair: for if it be short, and fine, then the skin is thin: if it be long and rough, then is his skin thick and boysterous.

Now the skin that is fine, must be Cauterized or seared with a
very

very light hand, in as much as the skin is so soon pierced through, and the thick skin with a heavy hand, and both of them with such a tempered hand, that the skin must no more but look yellow: where-in you shall ever find, that the fine skin will sooner look yellow than the thick skin, the main reason being, because the thickness and roughness of the hair of the thick skin doth cool and choak the heat of the Iron, in so much, that if it be not laid to with a more heavy hand, and the Instrument so much the more and the oftner heated, it cannot work that effect which in Art it should do.

Now you shall also observe, that in drawing of any Line or other Cauterize, whatsoever, that you ever draw with the hair, and never against the hair, whether the Lines be short, long, deep, shallow, straight, crooked, or over-thwart, according as the grief doth require.

Now to conclude, you are to observe in Cauterizings, these few precepts: First, that you do not give fire to any sinewy place, except there be some apparent swelling, or else impostumation. Secondly, that you give not fire to any bone that is broken, or out of joynt, for fear of breeding a general weakness in the whole member. Thirdly, never to give the fire so deep, or suffer your hand to be so heavy, that you may mishape, or deform the Horse, either by unnecessary figures, or uncomely Skars. Fourthly, not to be too rash or hasty in giving fire, as if every cure were to be wrought by that practice only, (as I know some very well reputed Farriers hold opinion) but only to attempt all other good means before, and when all hope else is desperate, then to make the fire your last refuge, as an extremity that must prevail when all other practices do perish.

Lastly, I would not have you, like those foolish Farriers, which know nothing, utterly to contemn and neglect it, as if it were useles, but with all moderation and Judicious discretion to apply it in fit time and place, so the poor Horse may gain ease, your self good Reputation, and the owner profit: which is most certain, as long as you are governed by wisdom.

C H A P. CLXXVIII.

Of Cauterize by Medicine, which is Cauterize Potential.

THe potential Cauterize, or searing of the flesh by Medicine, is, (as I said before) when the medicines are either Corrosive, Putrifactive, or Caustick: Corrosive, as when they do corrode, rot, gnaw, and fret the flesh: Putrifactive, when they do corrupt the complexion of the member, and do induce a main Skar like dead flesh, causing infinite pain, in such sort, that they are often accompanied with Fevers and mortality, and therefore are not to be administered, but to strong bodies, and in very strong diseases; and Caustick, which is as much to say as burning, when the operation is so strong, that it inclineth, and cometh nearest to the nature of fire, and so burneth and consumeth whatsoever it toucheth.

Now these Potential Cauterizes do exceed and excel one another by certain degrees, as thus: the Corrosives are weaker than the Putrifactives, and the Putrifactives are weaker than the Causticks; the Corrosives work upon the upper part in the soft flesh, the Putrifactives in the depth of the hard flesh, and the Causticks have power to break skin sound or unsound, both in hard and soft flesh, and that very deeply also.

Now of Corrosives some be simple, and some be compound: the simple Corrosives are Roch-allom, burnt or unburnt, the Sponge of the Sea somewhat burnt, Lime, red Curral, and the powder of Mercury, the shavings of an Ox or Harts-horn, Precipitate, Verdigrise, and such like. The compound Corrosives are, black Sope, and Lime, *Unguentum Apostolorum*, and *Unguentum Egyptiacum*, and *Unguentum Caraceum*, and many such lick: and these are to be applied unto Sores, Ulcers, or Excrefcions, after they are Corroded.

The Putrifactives are Arsnick, either white or yellow, Resalgar, or any Medicine compounded with any of them; besides, Sandaracha, Chryfocolla, and *Aconitum*.

Now if you would have your Putrifactive medicines to be canstive, that is, breeding a great Skar, and hot in the fourth degree: then they are unsleckt Lime, and the burned dregs of wine; and these are to be used to Carbuncles, Cankers, and Amburies.

The Caustick Medicines are those which are made of strong Lye, called *Capitellum*, or Magistra, of Vitriole Romane, Sal-niter, *Aqua fortis*, *Apium*, Cantharides, Ciclamine, onions, strong Garlick, *Melanacardium*, the stones or grains of Briony, and many such like.

Now in conclusion, I would wish every diligent Farrier, seldome or never to use either Arsnick, Resalgar, or Mercury sublimate, simply of themselves, but rather to allay them (if the substance whereon they are to work be very great) with *Unguentum Apostolorum*; but if it be very little, then with Hogs grease, Turpentine, or such like. And thus much for this potential Cauterizing, and the proper uses.

C H A P. CLXXIX.

Of the Rowelling of Horses, and the use thereof.

THe Rowelling of Horses, is, amongst our ignorant and simple Smiths, the most ordinary and general practice of all other whatsoever, insomuch that not any Disease can almost be found about a Horse, either how slight or great soever it be, but presently without any reason or sense therefore, they will Rowel him for the same; whereby they not only put the Horse to a needless torment, but also bring down (now and then) such a flux of naughty humours, that they lame the Horse, which otherwise would be perfectly sound. But it is not my Theam to dispute of these ignorances; only this I must say of Rowelling, it is a practice as necessary and commendable for the good estate of a Horses Limbs, and Body, as any medicine whatsoever, so it be applied in his due time, and in his due place: otherwise on the contrary part, it is contrary to all goodness.

The helps which are got by Rowelling, are these, it separateth and dissolveth all evil humours, which either through Natural or Unnatural corruptions are gathered and knit together in any one place, hindring the office of any member, or deforming the body by any superfluity or evil substance; it looseneeth those parts which are bound, and bindeth those parts that are Weakned; it giveth strength unto sick joynts, and comforteth whatsoever is oppressed with any cold flegm, or hot cholerick substance: the general use of Rowelling, is either for inward strains, especially

especially about the shoulders or hips, or else for great hard swellings, which will not be mollified or corroded by any outward medicine, which is either Plaister or Unguent, for you shall understand, that when a Horse receiveth any strain or bruise, either in the upper joynts of his shoulders, or his hips, which joynts do not stand one upon another, as the lower joynts do, but they go one into another, as the one end of the Marrow-bone into the pot of the Spade-bone, and the other end into the pot of the Elbow, which is a double bone: Now as I say, when a bruise is received in these parts, if by present application of hot and comfortable medicines, the grief be not taken away, then soon there gathers between the pot and the bone, a certain bruised jelly, which continually offending the tender Gristle which covers the end of every bone, makes the Horse to halt vehemently: and then is this corrupt matter not to be taken away by any outward medicine, but by Rowelling only: and as I speak of the shoulder, so I speak of the hips, also, where the upper thigh-bone goeth into the pot of the camel-bone, and there breeds the like infirmity. Now for the manner of Rowelling, it is in this sort: First, when you have found out the certain place of the Horses grief, as whether it be on the fore-Pitch of the shoulder, on the hinder Elbow, or on the Hip, then you shall (having cast the Horse upon some Dung-hil, or soft ground) make a little slit more than a good handful below the place of his grief through the skin, and no more, so big as you may well thrust in a Swans quill into the same: then with your Cronet raise the skin a little from the flesh, and then put in your quill, and blow all the skin from the flesh upward, even to the top, and all over the shoulder: then stopping the hole with your finger and your thumb, take a small Hazel stick, and all to beat the blown place all over; and then with your hand spread the Wind into every part, and after let it go: then take a tampin of Horse hair twound together, or which is better, of red Sarcinet, half the bigness of a mans little finger, and above a foot or sixteen inches in length, putting it into your Rowelling needle, which would be at the least seven or eight inches long; thrust it in at the first hole, and so putting it upward, draw it out again at least six inches above; and then, if you please, you may put in another above that: and then tye the two ends of the tampins or rowels together, and move and draw them to and fro in the skin,

in any wise not forgetting, both before you put them in, and every day after they are in, to anoint them well with Butter, Hogs greafe, or Oyl de Bay.

Now there be other Farriers, which in that they are opiniated, that these long rowels, or rampins of hair or silk, do make both a double sore, and a great scar, therefore they make their rowels of round pieces of stiff Leather, such as is the upper part of an o'd shooe, with a round hole in the middest, according to this from: and then doubling it when they put it in, as soon as it is within, to spread it, and lay it flat between the flesh and the skin, and so as the hole of the Rowel may answer just with the hole that is made in the horses skin; and then once in two or three dayes to cleanse the Rowel, and to anoint it, and so put it in again. 

Other Farriers do use to make the Rowel of Lanthorn-horn, in the same fashion as is made of Leather, and in like sort to use it. But for mine own part, I have used them all, and truly in my practice find not any better than other: only the Leather or the horn is somewhat more clean'y, and less offensive to the Eye, yet they ask much more attendance.

Now if you do Rowel your Horse for any swelling, then you shall ever put in your long Rowel the same way that the veins run, and seldome or never crosse-wise, and the more you blow the skin for a swelling, so much the better it is: for the wind is it which only occasioneth putrifaction, and makes these festred humours to dissolve, and distil down from the secret hollows of the joynts, into those open places, where it falleth away in matter, and so the Beast becomes cured.

C H A P. CLXXX.

How to geld Horses or Colts.

THere is to be observed in the gelding of Horses, first, the age: Secondly, the season of the year: and lastly, the state of the Moon. For the age, if it be a Colt, you may geld him at nine dayes old, or fifteen, if his stones be come down: for to speak the truth, the sooner that you geld him, it is so much the better, both for his growth,

growth, shape, and courage: albeit, some hold opinion, that at two years old should be the soonest, but they are mistaken, and their reasons are weak therein.

Now if it be a Horse that you would geld, then there is no speech to be made of his age: for it is without any question, that a perfect Farrier may geld a Horse without danger at any age whatsoever, being careful in the cure.

Now for the season of the year, the best is in the Spring, between April and May, or in the beginning of June at the farthest, or else about the fall of the Leaf, which is the later end of September.

Now for the state of the Moon, the fittest time is ever when the Moon is in the Wane: as touching the manner of Gelding, it is in this sort, whether it be a Foal, Colt, or Horse: First, you shall cast him either upon straw, or upon some dunghil: then taking the stone between your foremost finger, and your great finger, you shall with a very fine incision Knife slit the Cod, so that you may press the stone forth, and no more: Then with a pair of small Nippers, made either of Steel, Box-wood, or Brasil, being very smooth, and clap the strings of the stone between them, very near unto the setting on of the stone, and press them so hard, that there may be no flux of blood: then with a thin drawing Caulterizing Iron made red hot, sear away the stone; then take a hard Plaister made of Rozen, Wax, and washt Turpentine, well molten together, and with your hot Iron melt it upon the head of the strings: then sear the strings, and then melt more of the Salve, till such time as you have laid a good thinckness of the salve upon the strings: Then loose the Nippers, and as you did so with that stone, so do with the other also: Then fill the two slits of the Cod with white Salt, and anoint all the outside of the Cod, and all over the Horses belly and thighs with Hogs greafe clean rendered, and so let him rise: And keep him in either some very warm stable, or otherwise in some very warm pasture, where he may walk up and down; for there is nothing better for a Horse in this case, than moderate exercise.

Now if after his gelding you do perceive that his Cod and sheath doth swell in any extraordinary fashion, then you shall chase him up and down, and make him trot an hour in a day, and it will soon

soon recover him, and make him sound without any impediment.

C H A P. CLXXXI.

Of the making of Curtails, or cutting off of the tails of Horses.

THe Curtailing of Horses is used in no Nation whatsoever, so much as in this Kingdom of ours, by reason of much Carriage, and heavy burthens which our Horses continually are exercised and employed withall, and the rather, sith, we are strongly opinionated, that the taking away of those joynts doth make the Horses chine or back a great deal stronger, and more able to support a burthen, as in truth it doth, and we daily find it by continual experience.

Now for the manner of Curtailing of Horses, it is in this sort: First, you shall with your finger and your thumb, grope till you find the third joynt from the setting on of the Horses tail; and having found it, raise up all the hair, and turn it backward: then taking a very small strong Cord, wrap it about that joynt, and pull it both with your own strength and another mans, so straight as you can possible pull it: then wrap it about again, and draw it as straight or straighter again: and thus do three or four times about the tail, with all the possible straightness that may be; and then make fast the ends of the cord: then take a piece of Wood, whose end is smooth and even, of just height with the strunt of the Horses tail, and setting it between the Horses hinder Legs, (after you have tramelled all his four Legs, in such sort that he can no ways stir) then lay his tail there-upon, and taking a main strong sharp Knife made for the purpose, set the edge thereof so near as you can guess it, between the fourth and fifth joynt, and then with a great Smiths Hammer striking upon the back of the Knife, cut the tail asunder: then if you see any blood to issue forth, you shall know that the cord is not straight enough, and therefore you must draw it straighter, but if no blood follow, then it is well bound: This done, you shall take a red hot burning Iron, made round after this fashion, of the full compass of the flesh of the Horses tail, that the bone of the tail may go through the hole, and with

it you shall sear the flesh, till you have mortified it; and in the searing, you shall plainly see the ends of the veins start out like pap-heads; but you shall still continue searing them, until you see all to be most smooth, plain, and hard, so that the blood cannot break through the burning: then may you boldly unloose the Cord, and after two or three dayes, that you perceiue the sore begin to rot, you shall not misse to anoint it with fresh Butter, or else with Hogs grease and Turpentine, until it be whole.

C H A P. CLXXXII.

To make a white Star in any part of a Horse.

IF you will at any time make a white Star, either in your Horses fore-head, or in any other part of his body, you shall, according to the opinion of the most ancient Farriers, take a Tile-stone, and after you have burned it, beat it into fine Powder: then take Lilly Roots, Daffie Roots, White brier Roots, of each a like quantity, and having dryed them, beat them also into fine Powder, and mix them with the first: then with a Razor shave that part of your Horse where you would have your Star: and then with this Powder rub it so vehemently, that you scarce leave any skin on; then take a good quantity of Honey-suckle flowers, and a like quantity of Honey, and the water wherein a Moul hath been sodden, and then distil them into a water, and with that water wash the sore place the space of three dayes together, and keep the Wind from it, and you shall presently see the white hairs to grow; for this Receipt hath been often very well approved.

There be other Farriers, which take a Crab, and roast it, and being fiery hot, bind it to that part which you would have white, and it will scald away the old hair, and the next hair that groweth will be white. Other Farriers use, after they have shaved the place, to take the juyce of sharp Onions, or Leeks, and to bathie the place very much therewith: then to take Barley bread, as fire hot as it cometh from the Oven, and clap it to the shaven place, suffering it to lye so till it be cold; and then after anoint it with Honey, and the White hair will come. Other Farriers use to anoint the shaven place with the grease of a Mouldy-warp sodden, and that will bring the

the white hairs. Other Farriers use after they have shaved it, to rub the place well with Salt, and then twice every day for a fortnight, to wash it with the broth wherein a Mouldy-warp and some Swines greafe hath been sodden.

Other Farriers use to boyl a Mouldy-warp in Salt water for three dayes together, or else in strong Lye, and ever as one Liquor consumeth, to supply it with another; then with this Decoction being warm, anoint the shaved place, and it will bring white hairs suddenly. Other Farriers take the Gall of a Goat, and rub the shaved place therewith, and it will bring white hairs also.

Other Farriers take Sheeps milk, and boyl it, and in that wet a Linnen cloath, and being very hot lay it to, renewing it until you may rub off the hair with your finger; this done, apply the milk to it twice a day luke-warm, till the hair do come again, which without all question will be white.

Other Farriers take the Roots of Wild Cowcumbers, and twice as much Nitrum mingled with Oyl and Honey, or else add to your Cowcumbers Sal-nitrum beaten, and Honey, and anoint the shaven place therewith, and it will bring white hairs.

Other Farriers use to take a piece of a Brick-bat, and with it gently to rub and chafe the place, till by the continuance thereof, you have rubbed away both the hair and the skin, so broad as you would have the Star, and then after to anoint it with Honey, until the hair come again: Or else to roast a Colewort stalk like a Warden, or an Egg, until it be stone hard; and then as they come hot out of the fire, to clap either of them to the Horses fore-head, and it will scald off the hair, then to anoint it with Honey till the hair come again.

Now to conclude, and to shew you the most perfect and absolute experiment, which I have ever found to be most infallible, and it is thus: You shall take a very fine, sharp, long Bodkin, made for the same purpose, and thrust it up betwixt the skin and the bone upwards, so long as you would have the Star; and in thrusting it up, you shall hollow the skin from the bone, the bigness that you would have the Star: this done, you shall take a piece of Lead, made in the true shape of your Bodkin, and drawing out the Bodkin, thrust in the Lead into the same holes; then you shall thrust the Bodkin cross-wise the forehead underneath the Lead; and then thrusting

in such another piece of Lead, you shall see it in the Horses face to present this figure; which being done, you shall take a very strong pack-thread, and putting it underneath all the four ends of the Leads, and drawing it with all straightness, you shall gather all the hollow skin together on a purse, folding the pack-thread oft and oft about, and still straighter and straighter, so that you shall see it then to present unto you this figure: this done, you shall let it rest at least the space of eight and forty hours, in which time the skin will be, as it were, mortified: then may you unloose the pack-thread, and draw forth the leaden pins, and with your hand close the hollow skin to the Fore-head hard-again; and shortly after you shall see the hair to fall away, and the next hair which cometh will be white; and this experiment is most infallible.

Now there be some other Farriers, which will not put in pins, nor use any pack-thread, but only will slit the fore-head, and open the skin on both sides, and then put in either a Horn or a plate of Lead as big as the Star, and so let it remain till the skin Rot: Then take out the Horn or Lead, and anoint the place with Honey, and the water of Mal-lows sod, and it will bring white hair: And surely this experiment also is most infallible; but it maketh a foul sore, and is somewhat long in bringing his vertue to effect.

Again, I have seen a white Star also made by taking the guts of a Hen, or Pullet, and clapping them hot as they come out of the belly to the Horses face, having in readines some hollow round thing made for the same purpose, to keep the guts together upon the horses face.

C H A P. CLXXXIII.

How to make a black Star, or white hair black.

IF at any time you would have a desire to make upon a white Horse a black Star, you shall take a scruple of Ink, and four scruples of the wood of Oliander beaten to Powder; incorporate this in as much Sheeps suet as will well suffice, and then anoint the place therewith, and it will no doubt make any white hair black.

Other old Farriers take the Decoction of Fern Roots, and Sage sod in Lye, and wash the place therewith, and it will breed black hair: but you must wash the place very oft therewith.

Other Farriers use to take the rust of Iron, Galls and Vitriol, and stamp them with Oyl: or else take Souters ink, Galls, and Rust, and beat them well together, and then anoint the place therewith, and it will turn any white hair to black.

C H A P. CLXXXIV:

To make a red Star in a Horses face.

IF you desire to make in your Horses face, or any other part, a Red Star, you shall take of *Aqua-fortis* one ounce, of *Aquavita* a penny-worth, of Silver to the value of eighteen pence; put them into a glass, and heat them well therein, and then anoint the place very well therewith, and it will immediately turn the hair to be of a perfect red colour, only it will endure no longer than till the casting of the hair: and therefore, at every such time you must renew the hair again, if you will have the Star to continue.

C H A P. CLXXXV.

How to make hair to come very soon, very thick, and very long.

IF you would have hair to come very soon in any bare place, or to grow thick where it is thin, or long where it is short, you shall take (according to the opinion of the most ancient Farriers) the Urine of a young Boy, and with it at first wash the place: after that, take Lye made of unsleckt Lime, Ceruse, and litergy, and with it wash the hair off, and it will make it come soon, long, and thick.

Other Farriers use to wash the place with Water wherein the Roots of Althæa have been sod: then after dry it gently with your hand, and it will increase hair much. Other Farriers use to wash the place with Oyl mingled with the ashes of Nut-shells burnt, or else Snail-shells burnt, and it will increase hair also. Other Farriers take Agrimony punded with Goats milk, and with it anoint the place, or else Oyl wherein a Mouldiwarp hath been boyled, and anoint the place with either of them, and it will increase hair very much. Other Farriers take the dung of Goats, Allom, Honey, and the blood of a Swine: mingle them all together, and stir them till they be ready to boyl, and being hot, rub the bare place therewith. Other ancient Farriers take Nettle-seed bruised with Honey, water and Salt, and then rub the place therewith. Other Farriers take the Root of a white Lilly beaten and sod in Oyl, and anoint the place therewith. Others take the juyce of a long Onion, or else the juyce of Radishes, and anoint the place therewith. Others take Tar, Oyl Olive, and Honey boyled together, and with it anoint the bare place. Others take the Soot of a Cauldron mixed with Honey and Oyl, and anoint the place therewith.

There be other ancient Farriers which use this, and it is the best of all, they take green Wal-nut shells, and burn them to Powder, and then mix it with Honey, Oyl, and Wine, and anoint the place therewith, and it will increase hair wonderfully, and very soon.

C H A P. CLXXXVI.

To make hair smooth, slick, and soft.

IF you will make your Horses Coat to be smooth, slick, soft, and shining, you shall with sufficient store of cloath keep him warm at the heart, for the least inward cold will make the hair stare: then you shall make him sweat oft; for that will raise up the dust and filth, which makes his coat foul and hard: then you shall, when the Horse is in his greatest sweat, with an old Sword blade turning the edge towards his hair, scrape, or as it were curry away all the white foam, sweat, and filth, which shall be raised up, and that will lay his coat even, and make it smooth: And lastly, you shall when you let him blood, rub him all over with his own blood, and so let it remain two or three dayes, and then curry and dress him well, and this will make his coat shine like glafs.

C H A P. CLXXXVII.

How to take off hair in any part of a Horse.

IF you will at any time take off the hair from any part of a Horse, you shall dissolve in water (according to the opinion of the most ancient Farriers) eight ounces of unsteckt Lime: and then boyl it till a quarter be consumed, then add to it an ounce of Orpiment, and then lay a Plaister thereof to any part of the Horse, and it will in very few hours bring all the hair away.

There be other ancient Farriers which boyl in runing water, Rust and Orpiment, and with it being very hot wash the place, and it will soon bring the hair away.

C H A P. CLXXXVIII.

How to cast and over-throw a Horse.

 **W**Hensoever you intend to cast or over-throw your Horse, after you have brought him into a convenient place: as namely, either upon some green swarth, or upon some Dung-hill, or in some Barn upon good store of soft straw, you shall take and double a long rope, and cast a knot a yard from the bought; then put the bought about his neck, and the double rope betwixt his fore-Legs, and about his hinder pastorns, underneath his fetlock, then put the ends of the rope under the bought of his neck, and draw them quickly, and they will overthrow him, then make the ends fast, and hold down his head, under which alwayes you must be sure to have good store of straw. Now if you would at any time, either brand your Horse on the buttock, or do any thing about his hinder Legs, that he may not strike, take up his contrary fore-Leg, and when you do brand your Horse, see that the Iron be Red hot, and that the hair be both seared quite away, and the flesh scorched in every place before you let him go, and so you shall be sure to lose no labour.

C H A P. CLXXXIX.

How to know the age of a Horse.

THe age of every Horse is known, either by his teeth, by his hoofs, or by his tail.

It is known by his teeth; at two years old he changeth the four fore-most teeth in his head, at three years old he changeth the teeth next unto them, and leaveth no more apparent foals teeth but two of each side, above and below: at four years old he changeth the teeth next unto them, and leaveth no more foals teeth but one on each side, both above and below; at five years old he hath never a foals tooth before, but then he changeth his tusshes on each side: at six years old he puttereth up his tusshes, near about which you shall see apparently growing a little circle of new and young flesh; besides, the tussh will be white, small, short, and sharp: at seven

seven years old, the two out-moſt teeth of his neather chap on both ſides will be hollow, with a little black ſpeck in them: And at eight years old, then all his teeth will be full, ſmooth, and plain, the black ſpeck being clean gone, and his tuſhes will be ſomewhat yellow, without any circles of young fleſh: At nine years old, his fore-moſt teeth will be very long, broad, yellow, and foul, and his tuſhes will be blunt: At ten years old, in the inſide of his upper Tuſhes will be no holes at all to be felt with your fingers end, which till that age you ſhall ever moſt perfectly feel; beſides, the Temples of his head will begin to be hollow and crooked: At eleven years of age his teeth will be exceeding long, very yellow, black, and foul, only he will cut even, and his teeth will ſtand directly oppoſite one againſt another; at twelve years old his teeth will be long, yellow, black, and foul, but then his upper teeth will over-reach and hang over his neather teeth; at thirteen years his tuſhes will be worn cloſe to his chap, if he be a much ridden Horſe, otherwiſe they will be black, foul, and long like the fangs of a Boar.

If a Horſes hoofs be rugged, and as it were ſeamed, one ſeam over another; if they be dry, full, and cruſty, it is a ſign of a very old age; as on the contrary part, a ſmooth, moiſt, hollow, and well founding hoof is a ſign of young years.

If you take your Horſe with your finger and your thumb, by the ſtern of the rail, cloſe at the ſetting on by his Buttock, and feeling there hard; if you feel betwixt your finger and your thumb of each ſide his tail, a joynt ſtick out more than any other joynt, by the bigness of a hazel Nut, then you may preſume, the Horſe is under ten years old, but if his joynts be all plain, and no ſuch thing to be felt, then he is above ten, and at leaſt thirteen. If a Horſes eyes be round, full, and ſtaring from his head, if the pits over his eyes be filled, ſmooth, and even with his Temples, and wrinkles either about his brow, or under his eyes, then the Horſe is young: if otherwiſe you ſee the contrary Characters, it is a ſign of old age. If you take up a Horſes ſkin on any part of his body, betwixt your finger and your thumb, and pluck it from the fleſh; then letting it go again, if it ſuddainly return to the place from whence it came, and be ſmooth and plain without wrinkle, then the Horſe is young, and full of ſtrength; but if being pulled up he ſtand, and not return to his former place, then be aſſured he is very old, and exceedingly waſted.

Lastly, if a Horse that is of any dark Colour, shall grow grissled only about his Eye-brows, or underneath his mane, it is then an infallible sign of most extreme old age: And thus much touching a Horses age.

C H A P. CXC.

How to make an old Horse seem young.

TAKE a small crooked Iron, no bigger than a Wheat Corn, and having made it red hot, burn a little black hole in the tops of the two outmost teeth of each side the neather chap before, next to the tusshes, and then with an Aul blade prick it, and make the shell fine and thin; then with a sharp scraping Iron, make all his teeth white and cleau: this done, take a fine Lancet, and above the hollows of the Horses eyes which are shrunk down, make a little hole only but through the skin, and then raising it up, put in a quill that is very small, as the quill of a Raven, or such like: and then blow the skin full of wind, till all the hollownes be filled up, and then take out the quill, and lay your finger a litle while on the hole, and the wind will stay in, and the Horses countenance will be as if he were but six years old at the most.

C H A P. CXCI.

How to make a Horse that he shall not neigh either in company, or when he is ridden.

IF either when you are in service in the Wars, and would not be discovered, or when upon any other occasion, you would not have your Horses to neigh, or make a noise, you shall take a list of wollen cloath, and tye it fast in many folds about the midst of your Horses tongue, and believe it, as long as the tongue is so tyed, so long the Horse can by no means neigh, or make any extraordinary noise with his voice, as hath been often tried and approved of.

C H A P. CXCII.

How to make a Horse exceeding quick and nimble of the Spur.

IF your Horse be either dul of the Spur through his natural inclination, or through tiring, or any other accident, you shall first shave him the breadth of a finger on both sides, just in the spurring place, on both sides the vein, then with a Launcet make six issues, or small orifices on both sides; then raising the skin from the flesh, you shall put into the holes a pretty quantity of burnt Salt, which will make the fore to rankle.

In this sort you shall keep it three dayes, and by no means ride the Horse: the third day being ended, you shall set a Child on his back with spurs, and make him spur the Horse in the fore place; which done, you shall wash the place with Piss, Salt, and Nettles sodden well together, and this will make his sides smart so extremely, that he will never abide the spur after.

Now you shall let him stand after his washing three dayes more, and then take half a pint of Honey, and with it anoint his sides once a day till they be whole. Also rub his sides with the powder of glass, and it will do the like.

C H A P. CXCIII.

How to make a Horse that tires, or is restiff, to go forward.

IF your Horse, (as it is the common nature of Jades) through the naughtiness of his nature, or dulness of spirit, be either so restiff, or so tyred, that he will not go forward a foot, but standeth stock still: You shall then make a runing snickle of a good small cord, and put it about his Cods and Stones, in such sort that it may not slip: then you shall draw the rest of the cord between the girths and the Horses body, and bringing it up just between the Horses fore-Legs, be sure to hold the end of the cord in your hand as you sit in the Saddle, then ride the Horse forward, and when he beginneth to grow restiff, or to stand still, then pluck the cord, and tramp him by the Stones, and you shall see that im-

mediately he will go forward: And in this same manner you shall use him for at least a fortnight together, and it will clean take away that evil quality.

C H A P. CXCIV.

Other most excellent and approved wayes to preserve a Horse from tyring, never disclosed till now.

IF your Horse either through violence of Labour, distemperature of Body, or naughtiness of Nature, happen to tyre under you, or travel not with that spirit you desire, then when you come to a baiting place alight, and set up your Horse warm, but do not walk him: then after he hath been well rubbed, take a quart of strong Ale, and put thereto half an ounce of the fine scarst powder of Elicampane, and brew them together, then give it the Horse with an horn; which done, tye his head to the rack, for you need not care for Provender till night, at which time Provender him well, and in the morning give him Oats or Bread, or both in plentiful manner, and being ready to take his back, give him the former quantity of Ale and Elicampane as afore-said, and doubtless you shall find him to travel with great courage and spirit, as hath been approved.

Also if you take a bunch of Penny-royal, and tye it to the mouth of your bit or snaffle, you shall find is very comfortable, and it will cause your Horse to travel lustily.

 Again, if you take of the best Tobacco, and dry it in the Sun in a glass close stopt, then pound it very small, and mix it with an equal quantity of the Cockle-shells, then with the Oyl of Dil, and the Oyl of Cloves, make the Powder into a paste, then make pretty round balls thereof as big as Wal-nuts, and dry them in the shadow in the Dog dayes, then keep them close in Gally pot, and give them as pills in the time of necessity; that is to say, a ball at a time, whensoever your Horse shall fail in travel: And this doth not only help tyring, but also takes away any cold whatsoever.

 Lastly, if your Horse notwithstanding for all this, do happen at any time to tyre, then presently take off his Saddle, and with the herb Arsmart rub his back all over very hard, then laying Arsmart also

also under the Saddle, so ride him gently at the first, and if there be any life in him, it will make him go, as it hath been made proof of.

C H A P. CXC.V.

How to make a Horse to follow his Master, and find him out, and challenge him amongst never so many people.

IF you will have your Horse to have such a violent love towards you, that he shall not only follow you up and down, but also labour to find you out, and own you as soon as he hath found you: you shall then take a pound of Oat-meal, and put thereto a quarter of a pound of Honey, and half a pound of Lunarce, and then make a Cake thereof, and put it in your bosome next unto your naked skin: then run or labour your self up and down until you sweat, then rub all your sweat upon your Cake; this done, keep your Horse fasting a day and a night, and then give him the Cake to eat, which as soon as he hath eaten, you shall turn him loose, and he will not only most eagerly follow you, but also hunt and seek you out when he hath lost, or doth miss you; and though you be environed with never so many, yet he will find you out, and know you; and you shall not fail, but every time that he cometh unto you, you shall spit in his mouth, and anoint his tongue with your spittle: And thus doing, he will never forsake you.

C H A P. CXC.VI.

The nature and special qualities of all the Simples that are spoken of in this whole Work, set down in the manner of Alphabet.

A

A *Drotanum*, which we call in English Southern-wort, is hot and dry in the third Degree, and openeth the pipes of the body, and is good for short wind.

Absinthium, which we call Worm-wood, is hot in the first Degree, and dry in the second: it cleanseth, and bindeth, and is good for the Stomack.

N

N *Arciffiradix*, which we call the Root of a white *Daffodil*, or else *Prim-rose* pearls, is dry, it cleanseth and draweth, and healeth wounds.

Nardi radix, which we call Setwall, is hot in the first, and dry in the second Degree; it bindeth and *Spica Nardi* provoketh Urine.

Naufturlium is hot and dry in the fourth Degree: it burneth, it draweth and melteth, and killeth Worms; see *Agrecum*, which we call Cresses.

Nigilla, which we call Git, is hot and dry in the third Degree: it stayeth Wind, killeth Worms, and looseneth, yet to give too great a quantity is dangerous.

Nitrum is of the same nature that Salt-peter is, and it mundifieth exceedingly.

O

O *Libanum* is a gum, it is hot and dry in the second Degree; it warmeth, bindeth, closeth wounds, and incarnateth.

Oil of Olives is of a very temperate nature, and chaangeth his qualities according to the nature of the Simples which are mixt with him.

Opium is cold and dry in the fourth degree, and is a Liquor made of Poppy dried and mixt with Saffron, it doth astonish and provoke sleep.

Opoponax is a Gum that is hot in the third, and dry in the second degree: it softneth and stayeth humors; it is good against all Colds. See *Papaver*, *Galbanum*, *Bdellium* or *Sagapennum*.

Orpimento is a kind of Metal, of which the artificial is called Arsenick, it is hot in the third degree, and dry in the second: it bindeth, corrodeth, burneth and fretteth, and is a Corrosive.

Origano, which we call wild Marjoram or Penitroyal, is hot and dry in the third degree; it taketh away stoppings, and is good for Coughs.

Orobus, which we call Fitches are hot in the first and dry in the second degree: they do open and cleanse.

Orizo, which we call Barley, is cold and dry in the first degree: it ripeneth and cleanseth.

Ortica, which we call Nettles, are hot and dry: they are biting and wholsom for the Lungs, or for Sores.

Ova, which we call Eggs, the white is cold, and the yolk is hot, and doth incarnate.

P

P *Anacea* is that Herb whose fruit we call *Opoponax*.

Panico is a grain which we call Panick, it is cold and dry, and bindeth.

Papaver, which we call Poppy, the Seeds thereof are white, and hot in the fourth degree. See *Opium*.

Pastinache, which we call Parsnips, are hot and do provoke Urine.

Pece, which we commonly call Pitch, is hot and dry in the second degree, draweth, drieth and ripeneth.

Pece liquida, which we call Tar, is hot and dry in the second degree, is good against Colds, or evil humors gathered together in the breast, and draweth wounds.

Pece Rafina, which we call Rosin, or Pitch of *Greece*, it draweth, healeth and incarnateth.

Pece Rafina & liquida, which we call Turpentine, it doth draw, skin, incarnate and conglutinate things together.

Pepper is hot and dry in the fourth degree, it is both attractive and mundificative, and good for all Diseases of the Breast or Lungs.

Peaches are cold and moist in the second degree: they bind and stir up Worms.

Petasties, which we call Butter-bur, is dry in the third degree.

Petroleum is a certain Oil made of Salt-peter and *Bitumen*, it is hot and dry in the second Degree: it healeth wounds and comforteth weak members.

Petroselinum, which we call Parsley, or Stone-Parsley, is, and especially his Seed, hot and dry in the third degree: it stays wind, openeth, and provoketh Urine.

Philonium, of which there are two kinds, *Philonium Romanum* and *Philonium Persicum* are excellent Compositions, and most comfortable after the loss of blood.

Polygonum, which we call Knot-grass, is cold in the second degree, and keepeth back humors.

Plantago, which we call Plantain, is cold and dry in the third degree: it comforteth, drieth, bindeth and incarnateth wounds.

Porri, which we call Leeks, Scallions or Onions, are hot and dry, and do extenuate Obstructions, and raise and loosen all evil humors in the Body.

Pisce or *Porrus*, is hot in the second degree, and is good for all cold watrish Stomachs.

Pulegium, which we call Peniroial, is hot and dry in the third degree: it doth vehemently dry in moisture, warmeth, ripeneth, and is good for the Lungs. See *Origano*.

Punicum Malum, which we call Pomegranate, is cold and dry: it bindeth, provoketh Urine, and is good for the Stomach.

R

R *Afano* or *Raphanus*, which we call Radish, is hot in the third and dry in the second degree: they comfort and are good for old Colds; but especially they provoke Urine.

Resina, which we call Rosin, is hot and dry in the second degree; it stoppeth, softneth, cleanseth, draweth and purgeth wounds, and is good against cold causes.

Resalgar, see *Risigalla*.

Rogoretio or *Rigolito*, which we call Licoras, is temperate in heat, and moistneth, and ripeneth, and is good for heat in the Stomach or Liver, and profitable against wounds.

Risigallo is a composition of Sulphur, Orpiment, and unbleekt Lime; and is a most strong Corrosive.

Rosa flor, which we call Rose-leaves, or Rose-cakes, are dry and binding.

Rubea, which we call Madder, is dry: it comforteth and incarnateth, the root thereof provoketh Urine and is good for the yellows.

Ruberb or *Rubarb* is hot and dry in the second degree: it purgeth choler and flegm, and putteth away stoppings.

Ruta, which we call Rue or Herb of grace, is hot and dry in the third degree: but the wild Rue in the fourth degree, and therefore exulcerateth: the Garden-Rue digesteth, and mightily comforteth, all inward inflammations it ripeneth, and drieth, and expelleth wind.

S

S *Avina* which we commonly call Savine, is hot and dry in the third degree: it openeth, dissolveth, drieth mightily, and is most sovereign against worms.

Sacaro is hot and moist, and is very comfortable.

Sagapenum, see *Serapino*.

Sagina or *Saggina* or *Sergo*, of some called *Panicum Indicum*, is only hot and dry.

Salo, which we call Salt, is hot and dry in the second degree: and it cleanseth.

Salazora, which we call Brine, or Water and Salt, is of the same nature that Salt is.

Sal-armoniack is hot and dry in the fourth degree: and it cleanseth.

Salee, which we call Sallows or Willows: it bindeth and drieth vehemently.

Salgemma, is a kind of Salt which is hot and dry: it cleanseth and mundifieth.

Salnitro, some use for this Salt-peter, it is hot and dry, and evaporateth: it comforteth Sinews and taketh away tiring or weariness.

Salvia, which we call Sage, is hot and dry in the second degree: it cleanseth and bindeth, is good for Wounds, or Exulceration of the Lungs.

Sambucus, which we call Elder-tree or Wall-wort, that is like Elder-tree, is hot in the second degree, and dry in the first: it drieth, digesteth, and conglutinateth.

Sandolo, which we call Sanders, are cold and dry in the second degree, and drive back humors.

Sandolo Rosso or *Sandolo Bianca*, which we call red Sand or white Sand, are hot and dry, and bring on skin.

Sanguis draconis, see *Cinaber*: yet some take it for the red Dock, or red Patience, but it is not so.

Sapone, which we call Sope, is hot: it draweth, mollifieth, drieth, cleanseth and purgeth.

Sassifrigia, which we call Saxifrage, is hot, dry, and binding.

Scabioso, which we call Scallions, is hot and dry in the second degree; they do regenerate, and are good for scabs, for the Lungs, or for the soreness in the breast.

Scamonicum, which is the juice of a root, is hot in the third degree: it digesteth and purgeth choler, but must never be given inwardly, unless it be corrected.

Scartola, which we call Endive, is cold and dry, and binding.

Sarcocolla, is a Gum of the kind of *Enforbium*, it is hot and dry in the second degree: it cleanseth, incarnateth, and comforteth Wounds.

Sea-Onions, is hot in the second, and dry in the first degree: it ripeneth and expelleth humors, it hindreth putrefaction, and preserveth health.

Semola, which we call yong Cole worts, are hot and dry in the first degree.

Semper vive, which we call Houfleeck, and some call Stone-crop, is cold in the third and dry in the second degree: it is good for burnings or frettings, or for inflammations of Ulcers; it driveth back humors, cooleth and bindeth.

Sevadolce is hot in the second, and dry in the first degree: it cleanseth and openeth.

Serapiao, is a Gum of Ferula, it is hot in the third, and dry in the second degree: it mollifieth, looseneth, and is good for Colds.

Serpillo, which we call wild running Betony or Time, smelling like Marjoram, is hot and dry in the third degree.

Sinapi, which we call Mustard, is hot and dry in the fourth degree: it draweth and resolveth, and is good for Scurfs or wild Scabs.

Solatro, which we call Night-shade, is cold in the third degree.

Sulphur vive, which we call Brimstone, is hot and dry in the third degree: it draweth, disperfeth humors, and killeth worms.

Spelta, which we call Beer-Barley, is a grain les than Wheat, and shorter than Rye, but not so black, is cool and cleansing.

Sparaci, which we call Asparagus, is without any manifest heat or cold, and only cleanseth.

Spiga or *Spica*, which we call Lavender, is hot in the first, and dry in the second degree: it cleanseth, and is good for the head, especially the conserve, which is very comfortable.

Squille, is that which we call the Sea-Onion: see Sea-Onion.

Stecados, which we call French Lavender, is hot and dry.

Storax or *Stirax*, is a sweet Gum, which is hot and dry: it correcteth, softeneth, and is good for coughs or any sickness in the head.

T

T *Artaro*, which we call Tartar, is the excrements of Wine, which stick to the Vessel: it is hot and dry in the third degree, and only cleanseth.

Tartaruch, which we call Snails with shells, are of the same nature that Snails without shells are,

Tasso barbarosso, which we call Yew, is of nature poison.

Turpentine is hot in the second, and dry in the first degree: it draweth, cleanseth, skinneth and comforteth.

Thymum, which we call Thyme, is hot and dry in the third degree, and expelleth flegm.

Thuris Lacrime, which we call Frankincense, is hot in the second, and dry in the first degree. See *Olibanum*.

Thuris cortex, is dry in the second degree, and bindeth.

Thuris succalis is hot and dry in the third degree.

Tithymalis, which we call Spurge or Milk-Thistle, is hot and dry in the fourth degree: it cleanseth and purgeth flegm and choler, and is good for old sores or fistulas.

Trisora magna is a certain Composition which will provoke sweat, helpeth grief in the Stomach, and taketh away all cold Rheums.

Tutla preparata is a certain Mineral that is cold in the first, and dry in the second degree, and is very good for sore Eyes.

V

V *Eratro*, see *Ellebor*.

Verbena, which we call Vervin, is hot and dry: it comforteth and mundifieth.

Verderame, which we call Verdigrease, is hot and dry in the third degree, and is a Corrosive that eateth away dead flesh.

Vermi, which we call Worms, do conglutinate and comfort sinews.

Verce is hot and dry: See *Brasica*.

Vitro, which we call Glais, is hot in the first and dry in the second, and it cleanseth,

Vinacea, which we call the Kernels of Grapes, are dry.

Virga Pastoris, which we call Wild Tassel, is cold in the third, and dry in the first degree: it comforteth and bindeth.

Visebio, which we call Lime, is hot in the fourth Degree: it drieth and skinneth, but being mixed with any liquid stuff, it burneth, and is Corrosive.

Vitalia or *Vitis alba*, which we call Briony, is hot, chiefly the root: it cleanseth and killeth scabs: it drieth, it draweth, mollifieth and dissolveth.

Vitelli, which we call the yolks of any Eggs, are hot, and do strengthen and incarnate.

Vitriol, which we call Copperas, is of two kinds, that is, *Vitriolum Romanum*, which we call green Copperas, and *Vitriolum album*, which we call white Copperas, they both are hot and dry, but the white is much the stronger; they take away scurfs, and kill scabs.

Vitriola Calcanthum, is reckoned amongst Metals, and is a kind of inky earth: it drieth and fretteth.

Vitriola herba is an herb that groweth on the Wall, and is taken for Pellitory of the Wall. See *Helxin*.

Urtica, which we call Nettles, are hot and dry, and stop and cleanse humors, and are good for sores.

Z

Z *Eserano*, which we call Saffron, is hot in the first, and dry in the second Degree: it comforteth and expelleth all inward Poison, and incarnateth Wounds.

Zebulus, see *Ziziphe*.

Zentonica, which we call Worm-seed, is hot and dry.

Zenzero, which we call Ginger, is of the nature of Pepper, and hath the strength of long Pepper; it maintaineth natural heat, and is good for cold stomachs.

Ziziphe taketh away Coughs, and helpeth the shortness of Breath

Zucche, which we call Gourds, are cold and moist in the second degree, and it allayeth all manner of Inflammations, or hot swellings.

C H A P. CXCVII.

Certain Principles touching SIMPLES.

YOU shall understand, that touching Simples, some are only to ease pain, as Lin-seed, Camomil, soft Grease, Suet of all sorts, or any other Oil that is hot in the first degree; and whensoever any of these Simples are compounded with their like, the Medicine is called *Anodyna* or *Lynogs*.

There are other Simples which are astonishing, benumbing or bringing asleep, as Opium, Mandrake, Poppy, Hemlock, and such like, which are gross and cold in the fourth degree; and whensoever any of these Simples are compounded with their like, then the Medicine is amongst Leaches, called *Narcotica*.

The third sort of Simples are such as incarnate or breed flesh, as Frankincense, Flour, Saffron, Yolks of Eggs, and such like, which are hot in the second degree; and whensoever any of these Simples are compounded with their like, then the Medicine is called *Sarcotica*.

The fourth sort of Simples are corroding, fretting or burning, as Arsnick, Risagallo, Mercury, Lime, and such like, which are hot in the fourth degree; and whensoever they are applied simple or compound, then the Medicine is called *Corrosive*.

The fifth sort of Simples are those which be called mollifying, and are four in number: that is, green Mallows, white Mallows, Violets, and Brank-urfin.

The last sort of Simples are those which are called Cordials, and are three in number; that is to say, Violets and Bugloss of both kinds.

And thus much touching the nature, use, property and operation of Simples.

C H A P. CXCVIII.

Of Weights and Measures, and how to know them by their Characters.

Albeit I have in this work set down your Weights and Measures in such plain English, that every one may understand them; yet forasmuch as the more curious do set down many excellent Receipts under obscure Characters, I think it good here to acquaint you with them all, that when you find any such, you may not be ignorant in the understanding of them.

Know then that the least of all weights is a grain, which is the weight either of a Barley-corn, or of a Pepper-corn, and his Character is *G.* or *Gr.*

Siligna is four grains, and his Character is *f.*

An English half-peny is five grains, and his Character is *ob.*

A Scruple is ten grains, and his Character is *ʒ.*

A Dram is three Scruples, or the eighth part of an ounce, and his Character is *ʒ.*

A Roman Penny is the same that a Dram is, and his Character is *X.*

An Ounce is the twelfth part of a pound, which is twenty four scruples, and four hundred and eighty grains, and his Character is *ʒ.*

The Character of half an ounce is *ʒ.*

A Pound in medicinal Receipts is twelve ounces, and his Character is *lb.*

The Handful is six Ounces and a half, and his Character is *M.*

The Character of as much as you can hold betwixt your Fingers is *Rc.*

The Character for a drop is *Gut.*

The Character for three drops is *Gut. iij.*

$\text{lb} \beta$ is half a Pound.

$\text{ʒ} \beta$ is half an Ounce.

$\text{ʒ} \beta$ is half a Dram.

$\text{ʒ} \beta$ is half a Scruple.

$\text{ʒ} \text{j} \beta$ is an Ounce and a half.

$\text{M} \text{j} \beta$ is a Handful and a half.

Pj. is half a handfull, which is three ounces and a half.
Anā or *an*, is alike, or of each alike.

And thus much touching Weights, and their true Characters.

C H A P. CXCIX.

The Farriers Instruments expounded, with their Names and Properties.

THe Figure 1. sheweth the Hammer, which driveth in the nail.
 Figure 2. the Pincers which breaketh off, clinched and draweth the nail.

3. The Butteris, which pareth and openeth the Foot.
 4. The Rasp or Rape, which maketh smooth the Hoof.
 5. The Cutting Knife, which taketh away the superfluous Hoof.
 6. The Fleam, with which he letteth blood in the Neck, or in the gross places where the vein is great.
 7. The Farriers Lancer which openeth small veins and thrids, where a Stroak may not be used.
 8. The Incision-Knife, to open Impostumes and to cut away superfluous Flesh.
 9. The Cronet to rake up Veins.
 10. The drawing cauterizing Iron to open and separate the flesh either sound or impostumed.
 11. The round button cauterizing Iron to boar holes in the skin and swelled places.
 12. The Mullers to cleanse Wounds.
 13. The Barnacles to pinch an Horse by the nose or ears, to make him endure pain patiently.
 14. The Needle to stitch up Wounds.
 15. The Probe to search and find out the depth of Wounds.
- And thus you have a full Explanation of all the needful Instruments belonging to the skilful Farrier.

The Farriers chief Instruments.

THE
POSTSCRIPT.

Courteous Reader,

HAVING now with infinite Labour and Industry perfected and finished this my MASTER-PIECE for the Cure of Horses and Mares, wherein the Physical part of Horsemanship concerning those manifold inward Diseases which are incident to Horses is clearly discovered, and the Chirurgical part concerning outward Accidents, is plainly opened and described; and having for the more absolute Advancement of Horsemanship, and to give satisfaction therein, made a particular Speculation and run through every Part, Vein, Bone, Sinew and Artery of the Horses Body, demonstrating not only their Number and Place by Figure, but also considering their Disaffections and Diseases which do thereunto belong; and having also with much pain (as a Work of this difficult nature requireth) brought it to a full period, not only giving you a few terms of Art concerning Horsemanship, but making an Anatomy from head to foot of all the Integral parts of a Horse, with their Diseases inward and outward, and their Physical and Chirurgical Cures exactly prescribed and set down, and have given you ocular Demonstrations of the whole Fabrick of the Horses Body. So that as in a Map you may behold every small Part, River, Creek or Stream running up and down within the Superficies of the Earth; so I have likewise made and drawn divers Pictures, setting out all the parts

and

and parcels of a Horses Body, and that they may be plainly seen and considered, I have most lively delineated and figur'd out every Part and Vein in the Horse, where to find it from head to foot. I have also Anatomized the Horse in every Bone, that you may perceive their Conjunction, and how they are joyned, and thereby judge of their Dislocations, and putting out of their places; and all this you shall at one view behold in the several Parts and Figures which you shall find in this Book.

Therefore, I would advise all Gentlemen, and others, who being of a generous spirit, cannot chuse but delight and take wonderful pleasure in Horses, to consider, that for want of Care and Experience many excellent Horses falling into slight and common Diseases, have either utterly perished, or else been lamed and spoiled; it will be therefore a Study worthy the thoughts of a generous Spirit, to know how to accommodate and apply Cures and Medicines to the outward and inward Diseases of Horses, in regard that a Horse is a Beast whose praises cannot be sufficiently declared.

The Horse is commodious for common use, as pleasing Tillage, and transporting of Carriages and Burthens, and also for mens continual occasions and daily Journeys. In time of Peace, when Princes did use to recreate themselves with Hunting Deer and other wild Beasts, Horses were always had in high estimation and honour; and those that would out-run the Wind, and made the best speed after the Chase were most esteemed, so that there could be no pleasure in hunting, if they had not Horses to carry them after their Game; and what a brave sight it is to see in a field an hundred or more hunting Horses riding and running this way or that way after the timorous

rous Deer, or fearful Hare? Therefore the Horse, as he was made for industrious Labour, so he is fit to maintain and procure the Pleasures and Delights of a Prince, or any Nobleman.

And moreover in War, the Courage and Service of a Horse is daily now seen, and too well known; he will, as if he were animated by the sound of Drums and Trumpets, presently rush into the Battel, and take delight to charge the Enemy; he is all fire, and full of Metal and Fury. And thus we see that a Horse is not only convenient for daily occasions of the Husbandman, of Travelers, and divers others, but in Princes Courts he is highly esteemed for Hunting, for Races, and other Pastimes; and also in the Wars, his daily Service is sufficiently known, being a Beast of a magnanimous and undaunted courage, so that the Horse is naturally made for Profit and Pleasure; for Labour and Delight; for Peace and War; for Hunting, for Triumphs, and all gallant occasions.

It is pity then that a brave Horse, well limb'd and spirited, falling sick of any inward Disease; or outward accidental Infirmity, as Sprains, Dislocation of Bones, Spavins, and hundreds more, should be spoiled, in suffering the Disease to grow on him until it be incurable, or in applying Remedies unfit for the Malady; whereby many a Horse becomes maimed, and for want of Cure utterly disabled for any Service.

Therefore my advice and counsel is, (as I said before) that if any Gentlemen whatsoever, shall have their Horses either by outward accident, as Sprains, pricking in the Feet, and the like; or inward Surfeits, Glanders, Colds and Heats by intemperate and extraordinary Riding fall sick, or become through the afore said Infirmities any
ways

ways disabled for Service, they should not depend upon their own Experience or Judgment, but should wisely consider with themselves, and consult with the Farrier, reasoning together, and comparing their Opinions concerning the Causes and Cures of such Diseases as are incident to their Horses, that so by this means, by the height of Discourse and Reason, they may come to a certain and infallible knowledge of the Horses Diseases and Infirmities, and having diligently searched out the Causes thereof, they may know likewise to cure the same; for you shall meet with many illiterate Farriers, who are not Book-learned, and therefore have no more knowledge than Horses themselves, but are subject through their Ignorance to run into many gross Errors, so that through their Negligence and aforesaid Ignorance, mistaking the causes and cures of Diseases, and in one word most grossly, for it is good to have experience both in the Theorick and Practick part of any Art or Science.

For another (to my knowledge) many good Horses do continually remain lame and unfit for Service, or else do utterly perish for want of understanding their Diseases and the particular Cures thereof. Therefore as wise Physicians do consult together when they meet with a sick Patient, so I advise both Gentlemen and Farriers to compare their Judgments together, whereby the Beast may be saved, the Gentlemen and Farriers gain Credit, and their Experience and knowledge in the many Diseases of Horses be much bettered.

Moreover, for the Readers greater benefit, all Simples and Compounds good for Horses are Alphabetically here placed, and the Conditions of them whether hot or cold, with their Names and Qualities are described. Also what Ounces, Drams and Scruples are to be given in any

any Drink. If Gentlemen be unacquainted with these things, let them confer with the Farriers, and so confirm their Judgments by Discourse. And so, courteous Reader, I have left you my best Work thus accomplished, and thus perfected, that I know, in all the points belonging to the Cure of Horses it will give full satisfaction, if the Reader follow the Advice of this Postscript.
