Comis omnibus, Comes Bonis. Cor: Bootij Ultrajecti

Amicis placandis, inimicis
mitis & facilis, curabor
antequam rogetur. Sen: de V.B. 20.

cl. lxx. xxx.

II Sapienter Plato si quid aliud in humanis,
id solum bene fieri scribit, quod fit Opportune.
Est enim occasio rerum agendarum domina:
— — data temporum profunt;
Et data non apto tempore quaeque nocent.
I' de xaxo o'z'is, u' de neica opaxepu.
Frontis capillata est, post est occasio calva.

EXPENDE rerum initia, progressus, exitus:
singulor: pondera, praetia, usus.

Parum prodest invenisse remedium, nisi invento prudenter
uti possimus: Medicas enim viduas ingeniosas & solertes,
quibus Sylva Remediorum suppetit, quae tamen sine delectu
& inconsulto dispensant: alias, quibus maturum est iudicium,
sed habent pauca, quamvis selecta remedia:

Præpauci sunt ingeniosi simul & prudentes.

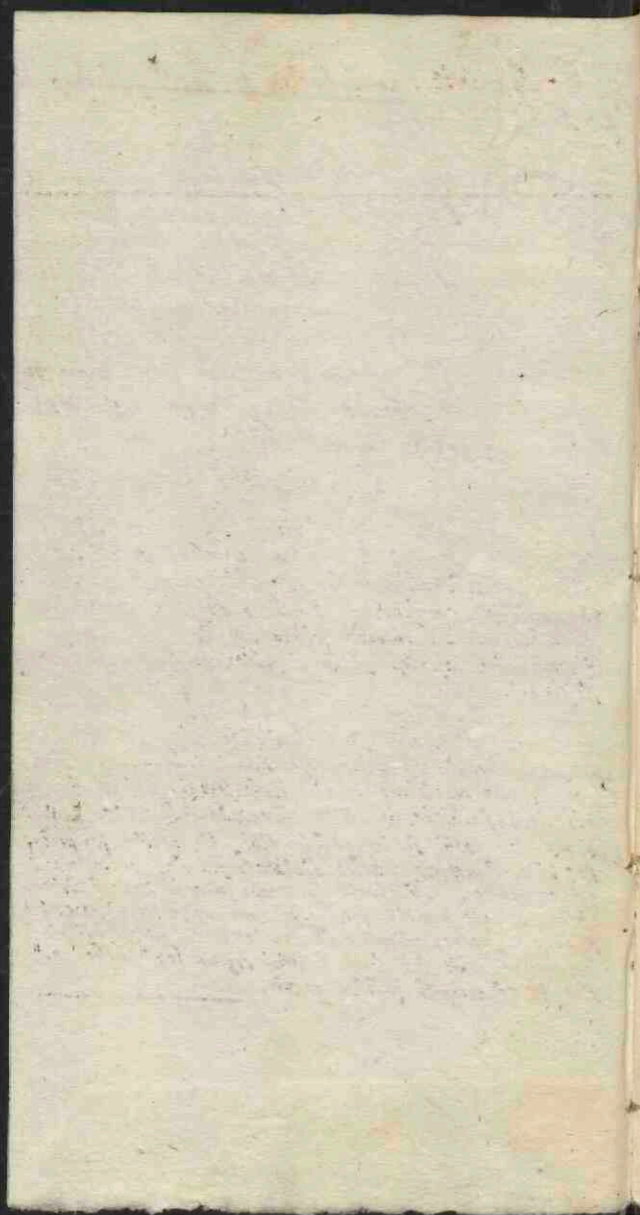

Nescio enim quomodo fiat, ut in his ferè desideretur
iudicium, qui valent ingenij promptitudine.

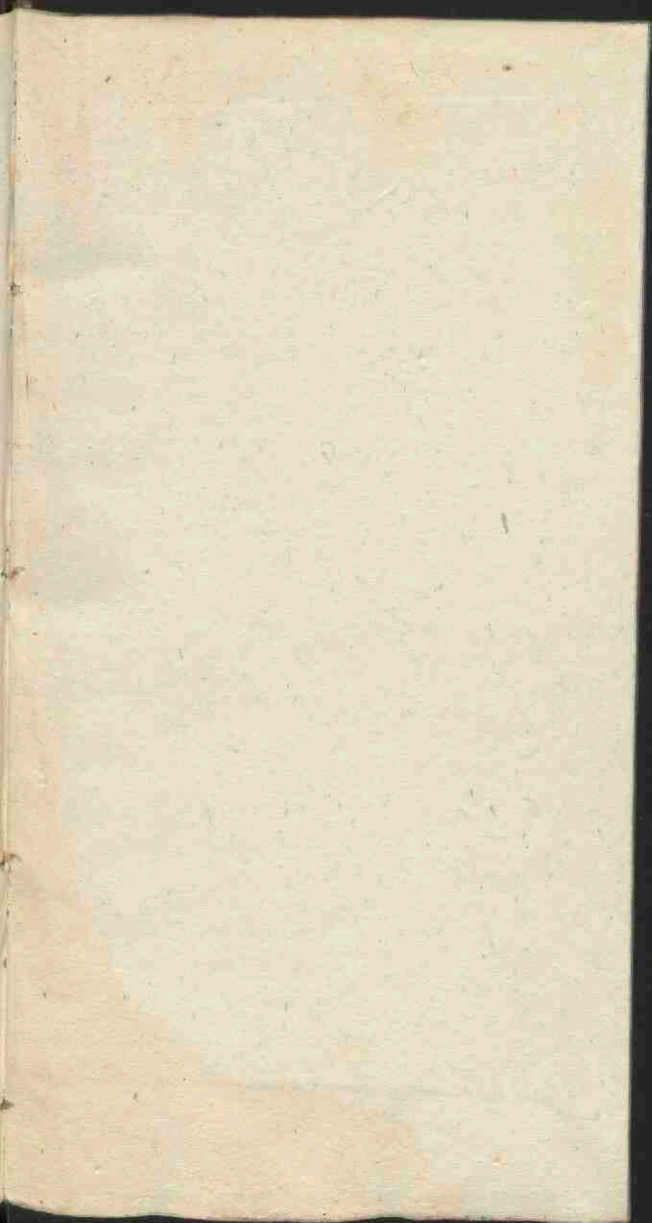

Artis igitur supplendus est naturalis defectus, Inventionis
celeritas iuvanda est artificioso Remediorum commentatio.

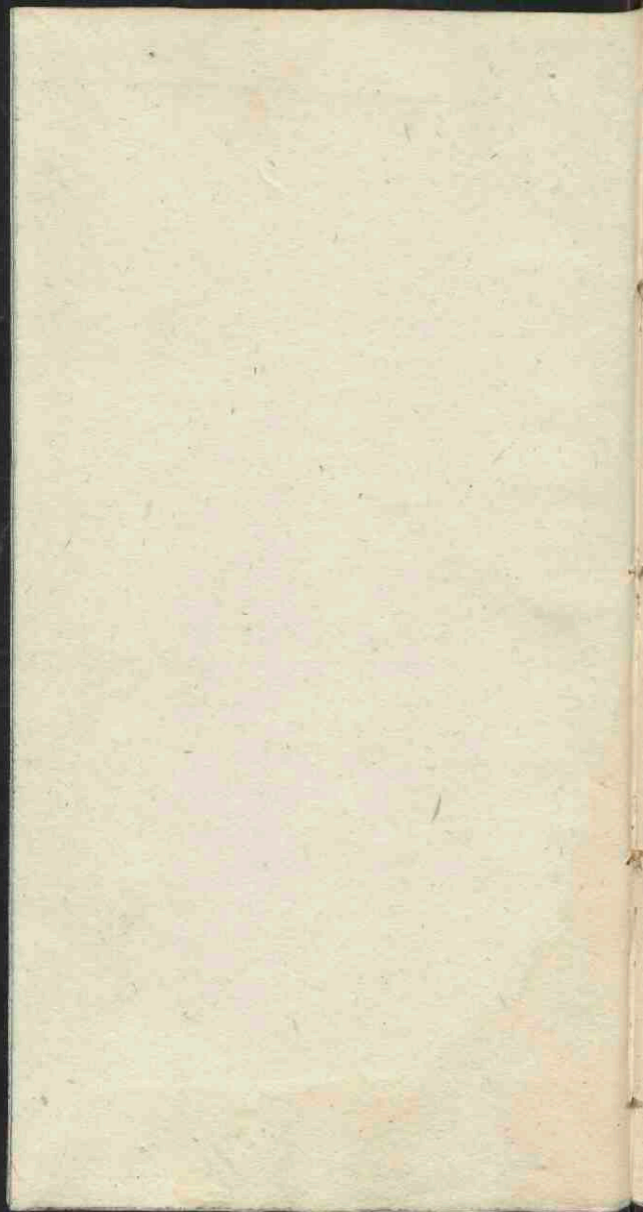

Consilij vero maturitas tribus circumstantiis, veluti simi-
bus circumscribitur, QUANTO, QUANDO, & QUOMODO. R. U. C.

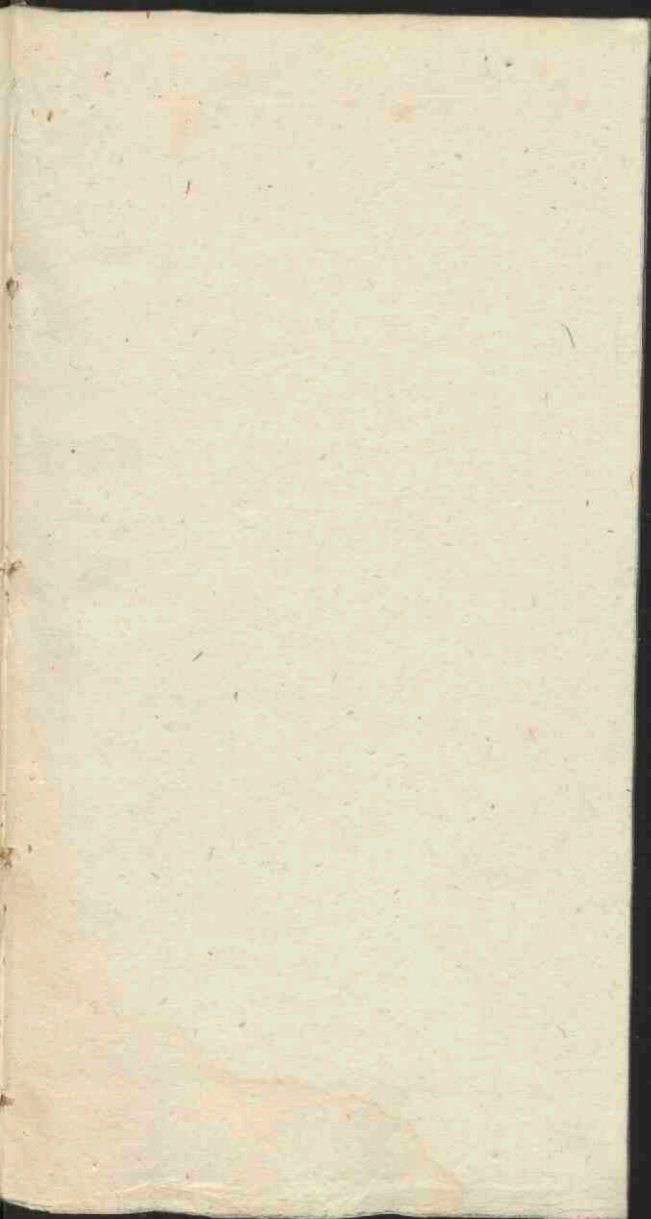

Si oblatior nobis spiritus novum tibi latus cogita prospectare
sit; huc ne propter remedia adhibere: sed iam totam naturam
2^a committito. Natura enim proba vitandi ratione adhibita
& innixa aut morbum profligabit, aut patiens est & seors pro-
feret: Insuper quæpi medicatio, & irrita, non nisi dispendio
deceat. Si alid forte experiri cogitis, leve id esto, ne
sint in eo accipiti iactura gravis. Ferneli T. Methi B.
