A COMPARATIVE PICTURE OF THE PRINCIPAL WATERFALLS.

IN THE WORLD

REMARKS.
The height of the Waterfalls, represented in the above Picture, is calculated from the point of departure to the level of the basin into which they fall. The figures on each side, denote in feet, the height of each fall.

REMARKS.
Below the Rjukan Foss, which is described above as falling down a height of 800 feet, there are two other falls or inclined planes, which together with the principal fall, antitook the Rjukan Foss as the highest Cascade in the World.
