Index Seminum No. 38- 1996

In response to the Convention on Biological Diversity, the Utrecht University Botanic Gardens supplies the seed collections requested on the condition that:

- a) They are used for the common good in the areas of research, trials, breeding, education and the development of public Botanic Gardens.
- b) If the recipient seeks to commercialise either the genetic material, its products or research derived from it, then written permission must be obtained from the Utrecht University Botanic Gardens.
- c) The genetic material, its products or research derived from it, are not passed to a third party for commercialisation without written permission from the Utrecht University Botanic Gardens.

Notes on ordering:

Correspondents are asked to use the order-form provided, **which must be signed**, and send it to the address mentioned upon it. Furthermore, they should check with their own authorities concerning import-regulations and include any necessary permits with their order.

Only requests reaching us before March 1, 1997 will be handled in sequence of entry. **Order-forms which will reach us after that date will not be handled!** Our Fax no. is +31 30 2535177 (do not use email).

*Regional office of Botanic Gardens Conservation International
at Utrecht University Botanic Gardens*

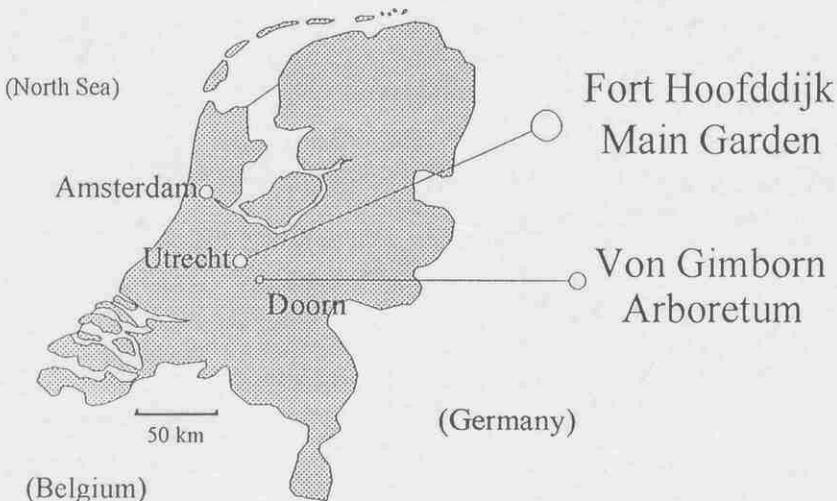

Gardens location

- Utrecht: Fort Hoofddijk (University Centre)
- Doorn: Von Gimborn Arboretum

Situation and climate:

Geographical position of the Main Garden	52° 06' N : 5°11' E
Altitude	2 m above sea level
Geographical position of the Von Gimborn Arboretum ..	52° 00' N : 5°20'E
Altitude	3 m above sea level
Mean daily minimum of the coldest month	- 0,6°C
Mean daily maximum of the warmest month	+ 21,6°C
Highest temperature	+ 36,8°C *
Lowest temperature	- 24,8°C *
Average rainfall	803 mm

*Monitored since 1849

From the Curator's Department

With the presentation of this Index Seminum No. 38-1996 we take the opportunity, as usual, to inform you on the latest developments in Utrecht University Botanic Gardens.

Concerning our specializations, there has been a special attention to the Aceraceae and Bromeliaceae.

Aceraceae:

This year our Botanic Gardens was asked to be the Host Garden for the I.D.S. Bursary 1996. This Bursary was generously donated by the International Dendrology Society to Piotr Banaszcak, a third-year student of the Agricultural University of Warsaw, Poland. With this Bursary our Acer Project was given a start with the production of a survey of Aceraceae belonging to the Dutch National Plant Collection and a study of these living plants and herbarium vouchers.

The research within this Aceraceae Project will take place in a number of phases and we wish to thank the following organisations for their cooperation:

- | | |
|--|--|
| * Dutch Botanic Gardens Foundation | * Regional Office of BGCI at Utrecht |
| * The Maple Society | * Professional Growers of Aceraceae |
| * IUCN-SCC Temperate Broadleaved
Trees Specialist Group | and the Keeper of the "Aceratum",
Mr. D.M. v. Gelderen (Fa.
C.Esveld) at Boskoop |
| * Botanic Gardens Conservation
International (BGCI) | |

The next step will be the production of a survey of taxa, currently considered threatened (IUCN Conservation Categories) present in the Western Botanic Gardens. This list will be analised and completed with the threatened species native to Temperate Asia. Special emphasis should be on specimens of recorded wild origin, We're especiaiy asking our Chinese colleagues for their help and support.

Bromeliaceae:

The Tillandsioideae as Subfamily of the Bromeliaceae is since this year part of the National Plant Collection.

Because one of us (Curator Eric J. Gouda) is amongst others developing a very keen specialization on Bromeliaceae, it is self-evident that our collections will grow with very valuable accessions.

Last but not least, the living collections have been enriched this year. Many new accessions from natural sources replaced accessions from cultivated origin, as part of the long-term collection strategy of replacing plants of cultivated origin for wild-collected stock.

Specializations

Utrecht University Botanic Gardens are developing specializations on the following groups and taxa:

-Flora of the Neotropics: Flora of the Guianas, with special emphasis on:
Bromeliaceae Orchidaceae Zingiberaceae

-Annonaceae (Research Collection)

-Conifers (esp. *Tsuga*)

-Broad-leaved hardy trees and shrubs:

Aceraceae	Betulaceae	Ericaceae
Euonymus	Laburnum	Magnolia
Oleaceae (esp.: <i>Fraxinus</i> and <i>Syringa</i>)		

-Alpines

-Crassulaceae (Research Collection)

-selected woodland plants (*Arisaema*, *Asarum* & *Trillium*)

-Penstemon

-Lecanopteris

These specializations are given extra attention regarding verification, nomenclature, wild source material, etc.

We are especially interested in material from natural sources of the groups and taxa mentioned above. We have a cooperation with gardens with identical specializations. If you are interested, please contact us and we will provide additional information.

Codes used

Explanation of provenance codes:

- S=** Seeds derived from a plant in cultivation but from known natural source (not necessarily F1 generation).
- G=** Seeds from a plant from another Botanical Garden or Institute; not from known natural source.
- K=** Nursery origin; not from known natural source

Verification:

The seeds in this list have been taken from verified plants and only if we were reasonably sure that cross-pollination with related species would be unlikely.
Verification codes used: **V**=verified; **I**=identified; **S**=identified by specialist

Accession Numbers:

The first two digits indicates the year of registration. The next two characters are coding for the garden location or specific group of plants: **GR**=Green Houses; **BL**=Rock Garden; **ZG**=Orig. Von Gimborn Arboretum; **RD**=Woody Plants; **ZE**=Annuals and Biennials. The other five digits is a sequence number.

Explanation of abbreviated collector names:

AH	K. Alpinar & H.'t Hart	KLIPH	E. Kliphuis
