## *Index Seminum No. 41 - 1999*

In response to the Convention on Biological Diversity, Utrecht University Botanic Gardens supply the seed collections requested on the condition that:

- a) They are used for the common good in the areas of research, trials, breeding, education and the development of public Botanic Gardens.
- b) If the recipient seeks to commercialise either the genetic material, its products or research derived from it, then prior written permission must be obtained from Utrecht University Botanic Gardens.
- c) The genetic material, its products or research derived from it, are not passed to a third party for commercialisation without written permission from the Utrecht University Botanic Gardens.

### *Notes on ordering:*

\* Correspondents are asked to use the order-form provided, **which must be signed by authorised staff**, and send it to the address mentioned upon it. Furthermore, they should check with their own authorities concerning import-regulations and include any necessary permits with their order.

\* Only requests, with a maximum of 25 packets, reaching us before **March 1, 2000** will be handled in sequence of entry.

\* **Order-forms which will reach us after that date will not be handled!**

\* Our Fax no. is +31 30 2535177 (do not use e-mail).

## From the Curator's Department

With the presentation of this Index Seminum No. 41-1999 we take the opportunity, as usual, to inform you on the latest developments in Utrecht University Botanic Gardens.

In general, the activities of the curators are divided in the following main groups:

- Jan Tolsma [JT]: Arboretum, Systematic Garden, Theme Garden
- Eric Gouda [EG]: Greenhouse Collections (focal point: Neotropical Collections) and the Rock Garden

### Specializations:

In the framework of the National Plant Collection (NP), Utrecht University Botanic Gardens are maintaining specializations on the following groups and taxa:

- Flora of the Neotropics: [EG] Flora of the Guianas, with special emphasis on:  
*Bromeliaceae*                   *Orchidaceae*                   *Costaceae*

- Broad-leaved hardy trees and shrubs: [JT]

<i>Aceraceae</i>	<i>Betulaceae</i>	<i>Ericaceae</i>
<i>Euonymus</i>	<i>Laburnum</i>	<i>Magnolia</i>
<i>Oleaceae</i> (esp.: <i>Fraxinus</i> and <i>Syringa</i> )		

- *Annonaceae* (Research Collection) [EG]

- Conifers (esp. *Tsuga*) [JT]

- Alpines [EG]

- *Crassulaceae* (Research Collection) [EG]

- selected woodland plants (*Arisaema*, *Asarum* & *Trillium*) [EG]

- *Penstemon* [EG]

- *Lecanopteris* [EG]

These specializations are given extra attention regarding verification, nomenclature, wild source material, etc. We are especially interested in material from natural sources of the groups and taxa mentioned above. We seek cooperation with gardens with identical specializations. If you are interested, please contact us and we will provide additional information.

### *Aceraceae*:

We have the honour to announce that our Botanic Gardens was asked for a second time to be the Host Garden for the Bursary of the International Dendrology Society. This Bursary for 1998 was generously donated by the I.D.S. to Dr. Cao Wei from Shenyang, China. He started his research, which is devoted to our Aceraceae Project in September 1999. Within the Section *Platanoidea*, the A.

*pictum* - (*A. mono*) complex is the focal point of a D.N.A. research programme. The research within this *Aceraceae* Project will take place in a number of phases and we wish to thank the following organisations for their cooperation:

- \* Dutch Botanic Gardens Foundation
- \* The Maple Society
- \* IUCN-SCC Temperate Broadleaved Trees Specialist Group
- \* Botanic Gardens Conservation International (BGCI)
- \* Regional Office of BGCI at Utrecht
- \* Professional Growers of Aceraceae and the Keeper of the "Aceretum", Mr. D.M. v. Gelderen (Fa. C.Esveld) at Boskoop.

One of the goals will be the production of a survey of taxa of *Aceraceae*, currently considered threatened (IUCN Conservation Categories) present in the Western Botanic Gardens. This list will be analysed and completed with the threatened species native to Temperate Asia. Special emphasis will be put on specimens of recorded wild origin. In this respect we kindly request the help and support of our Chinese colleagues.

#### ***Bromeliaceae:***

Study and development in the *Bromeliaceae* collection has several focus points. In the first place the *Bromeliaceae* research project for the "Flora of the Guianas": we try to grow all possible species from this area.

Beside this, the *Tillandsioideae* collection (as Subfamily of the *Bromeliaceae*) is part of the National Plant Collection (NP).

The genus *Tillandsia* of the Andian countries (especially Bolivia) has a special attention because of the various taxonomic problems on species level in these areas.

To increase the general knowledge about the recognised genera in the Family we try to grow representatives from all genera.

It is evident that our *Bromeliaceae* Collections will increase dramatically in both size and quality.

#### ***Arisaema:***

The last few years we have been very active with this group, increasing the number of wild collected species in the collection. Some areas, like the Peat Garden, have been improved to grow more *Arisaemas*. International contact with various *Arisaema* (*Araceae*) specialists caused considerable improvement of the collection.

Last but not least, the living collections have been enriched this year. Many new accessions from natural sources replaced accessions from cultivated origin, as part of the long-term collection strategy to replace plants of cultivated origin for wild-collected stock.

## **Codes used**

### Explanation of provenance codes:

- S=** Seeds derived from a plant in cultivation but from known natural source (not necessarily F1 generation).  
**G=** Seeds from a plant from an other Botanical Garden or Institute; not from known natural source.  
**K=** Nursery origin; not from known natural source.

### Verification:

The seeds in this list have been taken from verified plants and only if we were reasonably sure that cross-pollination with related species would be unlikely. Verification codes used: **V**=verified; **I**=identified; **S**=identified by specialist

### Accession Numbers:

The first two digits indicate the year of registration, (-- = unknown year of entry). The next two characters are coding for the garden location or specific group of plants: **GR**=Green houses; **BL**=Rock Garden; **ZG**=Orig. Von Gimborn Arboretum; **RD**=Woody Plants; **ZE**=Annuals and Biennials. The other five digits are a sequence number.
